A decade ago most producers learned by close association with users that they needed to up-grade their productions both technically and in content relevance. This they have done; on this they deserve our praise. One thing they have not done, however. They have not sold the distributors on the usefulness of their products. They have sold the stuff, but not motivated the dealer to recommend it to the ultimate customer in terms of what it is good for. One would think that rental libraries and AV dealers would not need prodding by the producer on this matter. But they do.

Two things ail a lot of distributors: they don't know what's "in the can," and they don't know their customers, the churches, and have little appreciation for their specific program needs. It's not enough to send out a flier saying, in summary, "We've got a film, won't you rent it?" Rather, "We've a new release; just the thing for your youth fellowship. It deals with so and so and it will set the stage for a discussion of such and such a question."

To too many dealers, films are films. Cherries are cherries, but you don't sell parascichinos to the woman who wants to bake a pie. Wise up, dealers; find out what the material in those cans is good for.

Get out and know your churches. Keep an up-to-date list of who is a

potential film-user in the churches of your area. Don't expect the pastor to channel your information. Rather, get from him the names of the leaders of the various groups of the church. Go after these people directly. Tell them what you have and what it is good for in terms of their needs. This means acquaintance with the churches. If you are too busy to do this, you'll be less busy in a year or so!

Churches don't use what they don't know about and too many churches have made too little effort to find out what is available now in films and film-

strips. Every now and then we run into ministers who have learned nothing since they came into the movement—and sat down and dozed off. They are dreaming of the day when high quality materials will be produced, not knowing that they have Rip Van Winkled right thru the last decade! Mighty few ministers have utilization know-how to match the inherent quality of most materials produced in the last five years. Rise up, O men of Sloth; look around you! You are leaders, you know!

The denominations have let the

**PHILCO**®

*Famous for Quality the World Over*

**The World's First Integrated Hospital Closed-Circuit TV System** was recently installed by Philco at St. Christopher's Hospital for Children, Philadelphia. It links the main operating room, lecture halls, auditorium, pediatric treatment rooms, psychology observation rooms and the radiology department. Folder describing this system will be sent upon request.

local church leaders down. So have the local councils. So has the National Council of Churches. Not one of these has a record of achievement when it comes to helping the local churches fruitfully employ these fine new media in the ongoing programs of the church. The general level of know-what and know-how is little higher, if any, than a decade ago. Total usage shows a poor ratio to new productions.

Setting AV materials of all kinds in a context of utilization requires educational imagination, and we have too little of it. This is the bottleneck restricting usage today.

In closing: Producers, do more than sell the local distributor; explain what it is good for. Distributor, know your goods and your customer's needs. Churches, it is later than you think, and while the status quo may be a comfortable bed to snooze on, it is a poor place to be when the Lord of The Harvest declares the fields are ripe into the harvest.

## Wind-Up O.K.

The wind-up for the 20-some minute b&w film *Should You Drink?* was good but the pitch didn't get over the plate. It didn't miss the plate; it just did not get there at all. A certain young woman is slicking up for a dinner party. Her fiance is trying via alcohol to put over a real estate deal. He drinks so he can do a bang up selling job; then he drinks because his alcohol-saturated brain fluffs the deal. Finally he arrives at the party, which has gone slowly through the cocktails phase. As they do, some one brings up the question, "Should you drink?"

Now this deep probing is conducted by brains wet with ethyl, and they decide that just about everybody can and should. One male, sipping his coke, says he just doesn't like the stuff, but his wife does, and how! Now these five couples are charming people, well-mannered, well-dressed, prosperous and well-adjusted. Well, not quite! Down underneath there is in each of them that little maladjustment that calls for alcohol and the compensations alcohol can give (so delightfully).

### Valerie Pictures

#### "FOUR LITTLE NAVAJOS"

Navajo children walk with beauty in Monument Valley

**PRIMARY — INTERMEDIATE**

**18 min. color \$110**

P.O. Box 3114 Cleveland 17, O.

Now this may be recognized as layman's reaction to the pseudo-science and neo-psychology of that film. That's the way it came out on my screen and in my cortex. I can't think of a time or place I'd use this film. Sorry. If you want to see for yourself, get it from McGraw-Hill, New York 36, N. Y.

## Works of Mercy

*Son of Ahmad*, a 75-frame, 15-minute b&w filmstrip, was produced by the Broadcasting and Film Commission of the NCC for Church World Service and its cooperating denominations. Its first use was in connection with the 1960 One Great Hour of Sharing. After that it helped church people, young and old, see and understand the need of disaster refugees for food, housing, medicines and constructive work projects.

Through the eyes of a typical village boy of about 14 years we see the relief and rehabilitation programs which the churches of the world support and we come to understand the impact which these works of mercy and help make upon the people who are assisted. Fine and useful production; a good buy for your library; user's guide; LP recorded commentary; \$3.50 from Church World Service, 475 Riverside Dr., New York 27.

## The User Designs A Projector

Let me put together the things that the lay worker in the church wants in a filmstrip-slide projector:

Ease in threading. They don't like units that combine the insertion of the filmstrip with the engagement of the propelling sprockets. Thus, inserting should be kept separate from sprocket engagement.

Ease of framing. Whether push or pull it must be positive, and the "handle" for it ought to be easily found by the fingers in the dark.

Ease in elevation. They don't like a machine where the center of gravity changes when the projector lens is elevated, nor those with front legs close together. They tip too easily. They prefer not to turn nuts or unlock and re-lock legs that kick out. They like the base to stay put when elevating the image.

Ease in focusing. They don't like objective lens assemblies that fit sloppily and wobble. If focusing is of the push-pull kind, let it slip easily and stay put. If of the rotating variety, they want it firm and positive. The kind that jumps a groove and goes

completely out of focus drives them nuts.

Heat and Light. They wonder why the ventilation louvers above the lamp can't tilt forward so light won't leak into their faces; why some projector get too hot; and why there can't be a way provided for some light to leak out onto the reading script.

We have four projectors: Weeny Tiny, a midget from some distant past for use on a table with a class; Fingermasher, older vintage which is hated; Easy Willie, which everyone wants and signs up for; Clumsy Clim, which no one wants to use. Oh, yes, we have a new one, Cool Clarence, who is already making and keeping friends because he is so positive and well adjusted!

## Coming Films

As a rule this department does not announce films, but this month we shall make an exception. The Broadcasting and Film Commission of the NCC (475 Riverside Dr., N. Y. 27) has in production and soon ready for release several important titles you may want to know about. They will be reviewed here as soon as possible.

*Treasure at Bethany* is a 33-minute drama on stewardship in terms of time, ability and money. The ecumenical church has become a missionary sending church and *Household of Faith*, 30-minutes and in color, was shot in India and tells of the sending of a missionary to Thailand by the United Church of India. One of the first acts of the followers of The Way was to share and they have been at it ever since those early days and now comes the 30-minute film *Sounds of the Earth* to show why and how it is still a basic human act. CROP sponsors this one.

All who have to do with pre-marriage counselling, and this certainly includes parents, will be glad to know that two films—dramatic in format—are being produced in this field. They are *I Do* and *Flight Through Darkness*. For further information on these and the others above, write to BFC.

If you want information on the following titles see your AV library or dealer or write to Family Films, Inc., 5823 Santa Monica Blvd., Hollywood 38, Calif.: *Shepherd Life*, a visualization of the 23rd Psalm and other pastoral elements; *Life and Customs* village life, tent life and work; *Where Jesus Lived*, places related to His boyhood and ministry; *Jerusalem, The Sacred City*, sites and buildings and places with Biblical associations; and *A Pictorial Geography, Exploring Ancient Cities and Dead Sea Scrolls*. Each is 14 minutes; available in color and B&W.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Elephant Baby

*Encyclopaedia Britannica Films, 150 Wilmette Avenue, Wilmette, Illinois) 11 minutes, 16mm, sound, color or black and white, 1959, \$120 or \$60. Teacher's Guide Available.*

### Description

In the colorful setting of India's tropical rain forest country, *Elephant Baby* tells the true story of an elephant from his first days with his mother through the many weeks of training in a crude "classroom" of bamboo to the day he proves himself ready to join the working elephants in the teakwood lumber camp.

The film opens as Raman, a young boy, is searching for an elephant from his father's herd which had gone into the forest to have her baby. Raman soon comes upon the mother and her baby who appears to be strong and healthy. He decided to name it Cheria," the little one. The camera moves closer to watch Cheria as he is drinking his mother's milk, which is said to be the richest of all animal milk. Cheria drinks three gallons a day and will continue to nurse from his mother during the next two years.

The three return to the lumber camp where Raman's father will be waiting to see the baby. Teakwood, a very hard and heavy wood, requires the strength of elephant-workers to transport it to the river. This wood is the main source of income for the village. Cheria and his mother, who is relieved from heavy work for a few months, go to the river for a cooling bath. All the elephants are bathed by their keepers in the evenings to cool them and keep their skin from cracking.

Time passes and Cheria is next seen when he is five years old. During this time he has not yet grown to adult size. However, he is considered to be ready for training, and a small pen of bamboo poles is made ready. Here he first is to feel the weight of a human on his back. His reaction is similar to that of an unbroken horse, as he is seen to buck and try to unseat his rider. But through the trainer's patience and rewards he eventually comes to accept the rider. Next, he is taught the simple commands of "up" and "down" through the use of a heavy teakwood block which is low-

erel to force Cheria down, then lifted to allow him to rise while accompanied by the proper commands.

When a tiger hunt is organized in the village, Cheria is allowed to accompany the other elephants who carry the hunters and necessary supplies. Raman is proud to see that Cheria does not panic and is obedient when the tiger is sighted and killed. In the last scenes the baby elephant, now trained and mature, takes his place with the others, doing his full share of the work in the lumber camp. He now is no longer Cheria, but Omban Yanai—a grown-up elephant.

### Appraisal

*Elephant Baby* gives a detailed account of the daily activities of working elephants in India and of the people who train them. In the social studies area, it illustrates the importance of elephants in India and their training as well as presenting valuable concepts about the people's lives, also the geography, of India. It is correlated with basic readers for utilization in the language arts programs, and appropriate to studies of animals in science. The few basic ideas are presented clearly and simply and the story-telling approach combine to sustain interest for the young child in this documentary. The film's technical quality was considerably above average.

Because the conditions in the teakwood forests of India are not often so primitive as pictured in this film, the teacher needs to explain that elephants have been replaced by machinery in most locations unless the terrain is unsuitable. The dense jungles of Mysore, where elephant labor is still commonly used, provided the locale for this film.

—Patricia Ann Peter

## A Journey into Time

*(Sterling Educational Films, 6 East 39th St., New York 16, N. Y.) Produced by Viking Films. 17 minutes, 16mm, sound, color or black and white, no date. \$160 or \$75.*

### Description

Through the use of animation, *A Journey Into Time* depicts the condi-

tion of the earth in its primeval state before there was any life on it. The transformation of the earth from a fiery ball into an inhabitable globe is pictured. The predominant forms of life throughout geologic time, from the beginning of life to the ascent of man, are featured.

As the film opens, the earth is seen as a fiery ball of rock with no life of any kind. As the surface cooled, it contracted and hot steam and gases were squeezed out to form the primeval atmosphere, an atmosphere so thick that no sunlight could break through. As rain formed from the water vapor fell on the earth, it was immediately turned into steam and boiled back into the atmosphere. As the crust cooled below the boiling point, the rains began in earnest. Rain must have fallen in torrents for uncounted days to form the oceans. Gases, rich in minerals, continued to spew from volcanoes and boil up from the seas to enter the atmosphere.

As yet there was no life but carbon compounds, the building blocks of life, were linking up in the seas. No one knows what the first living things were like. It is thought by many they were particles of protoplasm. There is no trace of the early beginning of life nor of the types which immediately followed. However, as certain species grew larger and developed hard body parts, they left impressions in the rocks to form fossils. From these fossils man has been able to trace the history of life.

As pointed out in the film, at the dawn of the Paleozoic Age, life was found only in water. Trilobites, primitive arthropods, were the highest form of life. Worms had already had a long line of development. Their ancestors, however, had not left a trace because of their soft bodies.

Quickly spanning about 150 million years, the film shows giant sea scorpions and simple fish with mere traces of a backbone. The oceans are seen teeming with shellfish. The plant-like crinoids were to be found on the ocean floor. Many trilobites were still to be found; however, they were no match for the giant nautiloids which were the rulers of the deep.

The film then pictures a later geologic time in which plants were still confined to the seas. Fish with inner skeletons had developed—the

first of the true vertebrates. Many of these fish had sturdy bones in their fins and were able to breathe in or out of the water. In time the shallow waters drained away and plants such as the mosses and the huge equisetum conquered the land and prepared the way for land animals. Giant insects developed and conquered the air.

Some fish, having the ability to breathe out of the water, used their short fin-like legs to crawl out upon the land. From these, the giant amphibians developed and for a time ruled the earth. They were not completely independent of the seas, however, because they had to be born in the water and had to return to the water to lay their eggs. Today, all the giant amphibians have disappeared and only a few small species are left. The giant plants, too, have long since toppled into the swamps and bogs. We see their remains today as the beds of coal and peat which are found over the earth.

With the beginning of the Mesozoic era, as the land was raised and became more arid, the amphibians gave way to the reptiles. The thick-skinned reptile, whose eggs were enclosed in a tough protective covering, did not need to return to the water and could move further out upon the land. For a time the earth was dominated by giant reptiles called dinosaurs. These

were of varied types ranging from the giant land and sea forms to the winged forms which sailed through the air. As always, the waters of the sea teemed with shellfish. These were prey to larger types of fish and these in turn to the still larger aquatic reptiles. At the end of the Mesozoic, the dinosaurs disappeared from the earth and only a few orders of pygmies remain today, remnants of a bygone age.

As a herd of camel-like mammals is pictured on the screen, the narrator points out that our own period, the Cenozoic, began about 70 million years ago. By that time birds had conquered the air. Mammals, with improved brains and nervous systems and better ways of caring for the young, dominated the earth.

By the time man appeared, the earth had already assumed its familiar appearance. The earliest known man was Pithecanthropus. He used fire, developed a language and made simple tools. The next and more intelligent type was Neanderthal man. A new type of man, *Homo sapiens*, then appeared on the scene. With his appearance the other types vanished. Skeletons and tools which have been found, along with drawings on cave walls, give modern man a good idea of the early mode of life of *Homo sapiens*.

Man, as the dominant species of life

on earth, did not long remain in his caves. He emerged and spread his dominion over all the world. As his power has grown, man has found new ways to develop. Not by changing his own body as the other animals have done, but by learning new things and inventing machines that do the changing for him. Man, by the power of his mind, has learned to outswim the fish and outfly the birds; he has learned to split the atom and has reached out to distant stars, all within the last 50 years of man's million year span of life's two thousand million years on earth.

### Evaluation

*A Journey Into Time* will do much to cause biology and geology to come alive for the student. No longer need the "geologic timetable" be a dry, meaningless mass of information to be memorized. This film helps show the development of life by picturing a sequence of increasingly complex forms. The use of animation to show the animal and plant types as "living" organisms makes the presentation much more vital than does the usual study of fossil remains. There are those who may object to the small number of plant and animal types represented and to the greater amount of footage devoted to man than his existence in time would warrant. The preview committee, however, feels that the film will go far toward making the study of geology and the development of plant and animals types more informative and more interesting.

—Donald Nichols

### About The Human Body

(Churchill-Wexler Film Production, 801 North Seward Street, Los Angeles 38, California) 15 minutes, 16mm sound, color or black and white, no date. \$165 or \$90. Correlated with the text series, "Health Elementary Science," by Herman and Nina Schneiders.

### Description

*About The Human Body* uses animation, diagrams and live action photography to explain the major functions of the skeletal, muscular, nervous, respiratory, digestive and circulatory systems. The more common methods used by a doctor to check the above systems is indicated as a young boy is given a complete physical examination.

The skeletal system is examined and animation is used to point out the need for a skeleton to support the body and facilitate movement. The various types of joints and major char-

teristics of each are also covered. The muscular system is surveyed including the concepts that the muscles are attached to the bones, work in pairs, and work by contraction.

As the doctor taps the boy's knee with a rubber mallet, the narrator explains what this tells about the general condition of the nervous system. The function of the nervous system is portrayed as an animated character is shown stepping on a tack. The path of the stimulus to the brain and spinal cord and the consequent action of the body are shown.

The doctor examines the respiratory system by listening with a stethoscope. The narrator explains something of the nature of the sounds heard by the doctor in the case of an infection of the respiratory system. The location, structure and function of the lungs is then traced by use of diagrams and animation.

During the examination the doctor feels the abdominal region. Animation is used to show what happens in each of the digestive organs. A cross-section of the small intestine is pictured to give a better understanding of the work of the capillaries in the digestive process.

A nurse takes a blood sample from the boy's finger. As this sample is viewed under the microscope, the function of the red blood cells and the white cells is discussed. The heart and blood vessels are then treated in detail as the pulmonary and systemic circulation is described.

The major systems are reviewed as the name of each is superimposed over the organs. The need for a regular examination by a doctor is stressed in the conclusion.

### Appraisal

It is a rare pleasure to preview a film and *not* have to say, "it would be a good film, except for ---" Here is an example, which, in the opinion of the film reviewer, has been well planned and executed for its intended audience.

The film uses live photography, animation and overlays. Some of the general functions of six major organ systems of the body—skeletal, muscular, nervous, respiratory, digestive and circulatory—are identified, illustrated and discussed. To be sure, there is no great development in depth, but the treatment is certainly adequate for either an introduction to or a review of the anatomy and physiology of the human body at the proposed grade levels. Moreover there are some "built-in" learning aids in the form of repetition of some of the more complex actions of the heart and lungs, several exam-

ples of audience participation and even a post-showing suggestion which could add "reinforcement" to the learning situation.

The animation is humorous, clever, accurate, and at times best described as "outstanding." Many a more pretentious film in the same subject matter area does not do nearly so good a job of using animated sequences.

The use of the more common medical diagnostic instruments and examination procedures, plus a carefully integrated explanation of why they are used and what they reveal, should prove enlightening to young people who have been intimidated or fright-

ened by previous trips to the doctor's office.

Narration has been kept simple and non-technical. It talks "to" and not "down to" the audience. It is clear, easy to understand and well paced.

Because the film itself is really a summary, there is no formal recapitulation at the end.

Considering the magnitude of the material covered and the excellence with which it has been done, any sins of omission or commission are judged to be minor and unimportant. The film is highly recommended.

—Seymour Friedburg

**BRANCH WORKSHOPS** . . . projectual-making workshops are also conducted at Tecnifax' twenty-six sales branches . . . registrations are accepted for groups or individuals.

# AUDIO

by Max U. Bildensee

## Potpourri

"Potpourri" is defined in Merriam-Webster as 'a mixture' and indeed this describes the broad variety of instructional audio materials available on the Spoken Arts label. The library of Spoken Arts extends into the areas of literature and art, into poetry and drama, into folk songs, folk tales and personalities.

In the latter category there are recordings by Brendan Behan who has been so frequently in recent headlines. In this the eminent Irish author relates the listeners with a selection of Irish folk songs and his own inimitable commentary not only about the songs but about the Irish people and their way of life. His *Irish Folk Songs and Ballads* (Spoken Arts 760) is interesting not only for its content but also for the picture of himself drawn by Brendan Behan through this performance.

Scholarly, strikingly original, and totally different in that it approaches a purely visual subject without visual implementation is *Invitation to Art* (Spoken Arts 763). And yet it offers information which can help the neophyte and uninitiate in understanding and appreciating visual arts. Brian Doherty, poet, painter and art critic, was appointed a Research Fellow in education at the Museum of Fine Arts in Boston and this brought him into contact with TV as a medium of communication. In the recording, Mr. Doherty invites the listener to join in creating a personal framework to which art can be correlated so that it becomes meaningful to the individual. This is not a glossary of terms but rather an exploration of speaker and listener together into the realm of art in which such subjects as line, emphasis, dark and light, contrast, brilliance and a wealth of other everyday art terms are informally discussed. This is a recording which may well find its place in instruction in basic art classes both in high school and college. And, of course, it may be very popular as a part of a library's circulating collection.

The Spoken Arts (95 Valley Road, New Rochelle, N. Y.) collection cannot be summarized in a few words other than to say that a consistently high level of artistic presentation is

maintained in a variety of areas. Some of the recordings available include *Golden Treasury of De Nerval, Baudelaire, Verlaine and Rimbaud* (Spoken Arts 764) which is a reading, in French, of representative work of these poets; and by comparison in language, Abba Eban who served as Ambassador from Israel to the United States for almost ten years, reads from the Psalms and Ecclesiastes in both English and Hebrew. This recording demonstrates not only the musical quality of Mr. Eban's voice but also the lyric quality of both the English translations and the Hebrew. Both of these recordings have application potential in appropriate language and literature classes on the secondary and college levels.

Did we say poetry? There is *The Poems of Emily Dickinson* (Spoken Arts 761) read by Nancy Wickwire; *The Story of Ossian* (Spoken Arts 755) read by John Masefield, and T. S. Eliot reading his *Burnt Norton, East Coker, The Dry Salvages and Little Gidding* on Spoken Arts #765.

This hasty summary of recent releases cannot begin to describe the broad catalogue earlier indicated. There are recordings of interest to modern literature and theatre students performed by such well-known persons as Arthur Miller, J. B. Priestly, Marc Blitzstein, John van Druten, Paul Green, Erskine Caldwell and others, much poetry, and recordings exploring other aspects of aural communication.

Dr. Arthur Luce Klein,  
president of Spoken Arts.

At the 'other end' of schooling experience, but certainly not at the 'other end' of recording quality, there are many recordings for the younger set. *Adventures in Music* (RCA Victor LE 1002) is designed to help younger children discover the beauty and grace of superior musical presentation. On this single record there are excerpts from carefully selected compositions by Debussy, Gounod, Tchaikovsky, Rossini, Elgar, Herbert, Copland, Bach and other well-known composers. The selections are rhythmic and tuneful and will appeal to young listeners to whom fine music is being carefully introduced. With the recording (performed by the National Symphony Orchestra conducted by Howard Mitchell) is a very useful guide prepared for teacher use by Gladys and Eleanor Tipton.

Still in the lower grades, lend an ear to three new editions in the *Read Me a Story* series produced by Weston Woods Studios, Inc., of Weston, Connecticut. There are four stories (two

**Audio CARDALOG Record Reviews on Cards**

# 903

**INDIVIDUAL CROSS-INDEXED CARDS ALREADY ISSUED!**

**SUBSCRIBE NOW — \$25.00 a year**

**Audio CARDALOG — Box 1771, Albany I, New York**

**— A WORLD OF SOUND ON FILE —**

on each side) of each of three records. These are all read by Owen Jordan to a very pleasant musical background supplied by Arthur Kleiner. The first of these includes "Caps for Sale" (by Esther Slobodnika), "Little Toot" (by Hardie Gramatky), "The Biggest Bear" (by Lynn Ward) and "Andy and the Lion" (by James Daugherty).

On the second of these recordings there are the stories "In the Forest" (by Marie Hall Ets), "Curious George Rides A Bike" (by H. A. Rey), "The Five Chinese Brothers" (by Claire Huchet Bishop) and "Jenny's Birthday Book" (by Esther Averill). And the third offers "Pancho" (by Berta and Elmer Hader), "Johnny Crow's Garden" (by L. Leslie Brooks), "White Snow Bright Snow" (by Alvin Tresselt) and "Magic Michael" (by Louis Slobodkin).

The applications of these recordings in the schoolroom are immediately obvious. Story telling hour can be made more entertaining with this added variety of voice and source of material as well as mode of presentation. For the harassed librarian—school or public—here is the idea substitute for that rainy afternoon story telling hour when all the children are there. Or plan to use these and other story telling records regularly as part of the library program.

Then, of course, the teacher training institution misses something when materials of this nature are not 'on hand' for student listening. First, there is the immediate source of information about recorded materials. Then there is the example of fine story telling which may well be copied in the classroom. And here is a way to introduce these stories to the college student who may want to tell them, read them or present them via records. Yes, at each end of the study

area there is a place for these records titled *Read Me a Story* and produced by Weston Woods Studios, Weston, Connecticut.

## Sounds in Song

While we are in the grades let's listen to a science record intended for the elementary school student. *Space Songs* (Science Materials Center 101, The Library of Science, 59 Fourth Avenue, New York 3, N. Y.) is an attempt to motivate student interest in a variety of questions about space. The material is presented in tuneful, singable, rhythmic songs (there is a songbook of piano arrangements which accompanies the record) entitled "Planet Minuet," "Ballad of Sir Isaac Newton," "Friction," "Longitude and Latitude," "Shooting Stars," "Constellation Jig," "Milky Way," "It's A Scientific Fact," "Gravity," "Why Does the Sun Shine," "Why Do Stars Twinkle," "Why Do Stars have Different Colors," "Why Go Up There," "Zoom-a-little-zoom," (The Rocket Song), "Beep-beep" (The Satellite Song) and "What is a Light Year."

The recording features an excursion into incidental learning in which the actual learning material is somewhat overshadowed by the catchy nature of the actual songs. Yet, in the songs, time is taken for simple declarative statement of scientific fact which can lead the interested student to further reading or other inquiry. Yes, there are many children who will enjoy hearing, and singing these songs and whistling the tunes, and some will be motivated thereby to further study.

In the area of science—and at the other end of the instructional spectrum—is *The Science of Sound* (Folkways FX 6007) which was produced by the Bell Telephone Laboratories and is

distributed under the Folkways label. By comparison, this is not speculation, this makes no effort to be 'showmanlike and appealing' and yet by its very nature it will attract many students and 'hi-fi buffs' who want to understand still better what and why sound is.

The recording starts with a section on "How We Hear" and enters into discussion and demonstration of such facets of sound as "Frequency," "Pitch," "Vibration and Resonance," "Intensity," "Loudness," "Noise Measurement," "Masking," "Quality," "Echo and Reverberation," "Delay Distortion," "Music or Noise?" "Fundamentals and Overtones," "Subjective Tones," "Filtered Music and Speech," "Dissonance and Consonance," "Musical Scales," "Vibrato and Tremolo" and "The Doppler Effect." And parenthetically, in reference to the Doppler Effect, we learned recently that through this the precise speed of satellites is measured.

The recording is quite complete. It is a lecture and demonstration. It is the use of sound to talk about sound and to demonstrate sound's properties and qualities effectively. This can be very useful in secondary school and college physics courses and to some extent in music instruction.

There is an abbreviated version of this recording on Folkways FX 613 which may be ample for some instructional applications. The subjects included on this recording are "How We Hear," "Frequency," "Pitch," "Intensity," "The Doppler Effect," "Echo and Reverberation," "Delay Distortion," "Fundamentals and Overtones," "Quality" and "Filtered Music and Speech."

In this 'potpourri' we must mention and acclaim the very ambitious project undertaken at the Yale University Audio-Visual Center under the capable direction of Elliott Kone. Employing the trade name 'Carillon' Yale is publishing the *Yale Series of Recorded Poets*. The first four, featuring Allen Tate, Robert Lowell, Stanley Kunitz and Dudley Fitts each reading his own work have been released and they bode well for the expansion of our recorded literature.

Thomas Lask, writing in the *New York Times*, said, "One of the surprising beneficiaries of the long-play record has been the contemporary poet. We agree, and add that the listener, too, is a beneficiary because through this medium will the modern bard be heard, recognized and claimed for his true worth. These are all worthwhile recordings and belong largely in school, library and home collections.

# FILMSTRIPS

by Irene F. Cypher

We should like to make a plea for a bit more imagination and artistic sense in the type of drawings and sketches used as the basis for film-strip illustration. This is not an attempt to balance or compare direct photography with drawings; it is not an attempt to say that one type of illustration is better than the other; to say such things would be downright silly, for each type has something to offer as a way of visualizing any material.

Direct photography has its value and place; the artist's drawing also has its place. Direct photography is good, and there is no denying the fact that the lens of the camera catches things as they are and gives us a pictorial record that is lifelike. Sometimes, however, it is good to have the artist's visualization, for he can eliminate distracting details and highlight important features. But (and here is our reason for the initial plea), if only the artist would use an ounce of imagination, of fantasy, spirit, call it what you will, when he makes his sketches.

Instead of always trying to make his pictures seem to be quasi-realistic scenes, why not frankly include some humorous figures, some line drawings to suggest situations, some delicate figures that create a feeling or mood. It is a relief sometimes to find pictorial material which is quite obviously not "real" but which nevertheless delights the eye of the viewer—and having done so, leads the mind to think about many things. There used to be a much quoted phrase to the effect that "it was good to leave something to the imagination."

*Airplanes, Jets and Rockets* (6 strips, color; produced by Jam Handy Organization, 2821 East Grand Blvd., Detroit, Michigan; \$31.50 per set, \$5.75 single strips). The basic story of this series is that of the principles of today's powered flight. Included in the story are accounts of how airplanes, helicopters, jets and rockets get into flight and what keeps them flying. Air flight is a common part of our way of life, but we are not all familiar with the advantages of jets over propeller-driven planes; certainly we know all too little about why satellites and space stations orbit or how a rocket works in airless space. The information in the set is timely, and well depicted for elementary and jun-

ior high science study. The story is plainly presented, but interesting.

*Birds and Their Songs* (4 strips, color, with two long-playing 12-in. records and a guide; produced by Museum Extension Service, 80 West 40th Street, New York 18, N. Y.; \$29 for complete set.) This is a truly splendid series for anyone interested in nature study; it is also a wonderful set to give to pupils so that they may learn to know and recognize the songs of many of the birds we hear in our gardens and woodlands. The ability to recognize the songs of these birds will add life-long pleasure and provide something that has meaning for us all.

The filmstrips give us pictures of about 40 of the birds most commonly found in woods, gardens, meadows, marshes and shores. The records were recorded by expert ornithologists and have caught the notes of the various calls clearly. There is considerable information about the birds, such as nesting habits, migration patterns, distances flown and general characteristics. The set is excellent and highly to be recommended for school use, for camps and nature study classes and for all nature lovers.

*David Einhorn: The Father of the Union Prayerbook* (Single strips, color, with manual; produced by The Union of American Hebrew Congregations, 838 Fifth Ave., New York 21, N. Y.; \$7.50). As the title suggests, this is biography; the story of a man who contributed much to Reform Judaism. As such it is a strip to recommend to all religious school and adult religious study groups. The life and work of the man are clearly portrayed and the factual account of his contributions to the ritual of his faith are well presented. The strip also has value as the story of how a deeply religious man watched the struggle against slavery at the time of the Civil War, and how his hatred of human slavery influenced him in his life work as a rabbi. The illustrations are well drawn and the artist has caught the spirit of the story and given us a portrait of a man and his family, his environment and his work.

*Hawaii* (6 strips, color; produced by Visual Education Consultants, Inc.,

2066 Helena St., Madison 1, Wisconsin; \$39 per set, \$7.50 single strips). Two mainland girls, Wendy and Chris, come by plane to visit our new state, and their visualized tour takes us from island to island to see people, places, ceremonies, industries, and life in Hawaii. We go from sugar and pineapple plantations to national park areas, exploring and visiting. There is a pronunciation key and primer of the Hawaiian language which will stimulate pupil interest, and they will be interested to see many evidences of the culture of the past as well as modern buildings, homes and recreational and business areas. Our tour is well planned and the presentation adapted to material included in curriculum units. There is much that we need to know about Hawaii, and this series will help us to get some idea of what life in the islands means to the people who live there.

*National Gallery of Art* (10 filmstrips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$60 per set, \$6 single strip). The National Gallery of Art in Washington, D. C., is a museum of note, and the masterpieces in its collections include examples of art of early Renaissance Italy, of Spain, France, the Low Countries, England and the United States. The policy of the gallery is to include both paintings and sculpture representative of regional and historic units. This series brings us highlights from the collection and includes examples of the work of Vermeer, Frans Hals, Giotto, El Greco, Van Dyck, Reynolds, Gainsborough, Ment, Renoir, Van Gogh, Gauguin, Cezanne and many others. The material is good for study purposes and for enjoyment, for the color quality of the reproductions is excellent. Sometimes the viewing of material such as this is inspiration for further study and as motivation for field trips to local museums and art galleries.

*Space and Space Travel* (4 filmstrips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$21.60 per set, \$6 single strip). By means of well

# Beseler Company Product A Result Of Non-Sensitive Film Experiments

The Charles Beseler Company of East Orange, N. J., reports a new film which is said to make black and white negatives from color slides, projection positives from these black and white negatives, and black and white positive projection transparencies from any black and white negative.

The film, called Slide-o-Film, should enable photographers to work in both color and black and white at the same time and to compose their photographs for both mediums. It will make possible the projection of black and white salon photos to large audiences, and black and white enlargements of these transparencies.

The product dates back almost ten years, when the United States government began its initial tests of nuclear fission. Immediately after the first tests, it was discovered that "radiation" or "fall-out" caused serious effects on regular films and other "sensitized" photographic materials . . . as far away as thousands of miles from the test site. At this time, an inventor demonstrated a new, sensitized film to government authorities which, according to his claims, was not sensitive to nuclear radiation. With this material,

the government bureaus found they could record duplicates of their original negatives and positives, and these duplicates would not be affected by radiation caused by nuclear fission. What's more, since it did not contain silver nitrate particles that are sensitive to ordinary light, it was grainless and produced transparencies of remarkable clarity, without a trace of grain, except for whatever grain existed in the original.

The inventor set up a manufacturing plant to produce this material (originally known as "Kalvar"), and supplied millions of feet to the government.

Early in 1957, the Beseler company became interested in this material for general photographic purposes. After some months of investigation, the company felt ready to introduce the product to professional and commercial users.

It was decided to test it on the amateur and commercial market before offering it to the general public. Early in 1958, through 75 camera shops in the New Jersey-New York area, this was done for a 6-month period.

drawn illustrations we are given the story of how artificial satellites have been launched into space and what man will have to do if he will follow the rockets into space. Emphasis is on how travel into space is achieved and what major problems must be met. Space travel is to be practical in the year 2000. The principles of rocket take-off are well explained and the material is planned for use in the intermediate grades and up.

*Picture Book Parade* (8 filmstrip color, with filmstrip text booklets; produced by Weston Woods Studio, Weston, Conn.; \$42 per set, \$6.50 single strip.) This series is a sheer delight to review, for it is refreshing and an example of what can be done with the medium when that ounce of imagination is used. The stories included are *The Five Chinese Brothers*; *Pancho*; *In The Forest*; *Curious George Rides A Bike*; *Magic Michael*; *Jenny's Birthday Book*; *White Snow*; *Bright Snow*; *Johnny Crow's Garden*.

The stories themselves are the kind that you love to read and tell over and over again, and the art work of the filmstrips catches that entrancing quality of illusion which adds so much to the pleasure of story telling and makes it an art. Because there are no captions to spoil or mar the pictorial content of the filmstrips, there is opportunity to feast one's eyes on each frame and really listen to the story—thus providing both a visual and aural experience with real learning potential (not to mention learning enjoyment). Really excellent filmstrip material!

*The Tabernacle As Described in the Bible* (single strip, color; produced by The Union of Am. Hebrew Congregations, 838 Fifth Ave., New York 21, N. Y.; \$7.50 with manual). This is an extremely interesting filmstrip for any group interested in Biblical history and also for those equally interested in all matters pertaining to the Holy Land, archaeological developments and evidences of the existence of ancient cultures. Of particular interest is the story of how Rev. Mr. Shouten, a Dutch Protestant clergyman, built a model of the Tabernacle at Mount Sinai and the care he put into the creation of this group. Interesting facts about the menorah, the ritual objects used, the building which constituted King Solomon's Temple, are all given. The art work is well executed and there is a feeling of dignity in the presentation. This is a filmstrip of value for all groups interested in Biblical and cultural history.

## A Corner of Recent DAVI Show

Here is a small segment of the exhibits at the DAVI convention in Cincinnati in April. See page 269 for a retrospective glance at this successful event.

# PHOTOPLAY FILMSTRIPS

**Greatest Show on Earth**—In color, a pictorial guide to the circus, based on Cecil B. DeMille's photoplay. Won Academy Award as best picture at 1953. 40 frames. \$7.50. With guide, \$7.80.

**Hansel and Gretel**—in color, 42 frames, highlights of fairy tale as performed by the Kinemins of Myerberg's screen version, released by RKO, \$7.50. With guide, \$7.80.

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to Directory of Sources, page 310. For more information about any of the equipment and materials announced here, use the enclosed reader service postcard.

## NEW EQUIPMENT

### CAMERA ACCESSORIES

"Magnifinder" enlarges (3.5x) ground glass image for critical focus. When used with twin-lens reflex cameras

Ednalite "Magnifinder"

it brings image to eye level. In plastic carrying case, \$9.57. EDNALITE.

For more information circle No. 101 on return postal card.

Tube and Prism for photomicrography with Rollei; permits subject to be viewed at all times, even through the exposure. Tube \$9.95; Prism \$64.95; bayonet adapters @ \$2. BURBR

For more information circle No. 102 on return postal card.

### PROJECTORS: Movie, TV

Film Editor-Previewer for 8mm features built-in dry splicer, "tape-recorder loading," fold-down 2½x3½" screen, 50-watt lamp, "Ediview" \$34.95. ELGEET.

For more information circle No. 103 on return postal card.

Projector: Viewer. Instantaneous interchange from large screen projection of 8mm film to a 2¼x3½" built-in viewer-screen is offered by the Kalart VP 88. Instead of sprockets the film is guided by nylon rollers. A small group may view a film without set-

Kalart Viewer

ting up a screen or darkening the room. As further encouragement for story-editing home and school movies, each projector includes a dual-purpose splicer (cement or splicing tape). \$89.50. KALART.

For more information circle No. 104 on return postal card.

### PROJECTORS, Still

Viewlex V-500-P filmstrip and slide projector features pop-up lamp ejector, magnifier pointer, self-threading, automatic take-up, motor-cooling; 5" f/3.5 lens, \$114.50. VIEWLEX. . . . .

For more information circle No. 105 on return postal card.

Sawyer's "500" Slide Projector features "easy-edit" slide feed, remote control, focus adjustment as well as advance and back-up; 500-watt; 4" f/3.5 lens. With remote control \$99.95; manual \$84.95. SAWYER.

For more information circle No. 106 on return postal card.

"Examiner" Filmstrip Projector gives 6x8" rear-projection image; front surface mirror system; 75-watt lamp; wt 6 lb.; usable in lighted room for individual and small group study. \$59.50. Available also as 2x2 automatic slide projector and combination filmstrip and 4-speed record player. RESED.

For more information circle No. 107 on return postal card.

### PROJECTION ACCESSORIES

"Victroscope" anamorphic lens converts any 16mm projector for showing Cinemascope wide screen movies, and may also be used as a supplementary camera lens for photographing wide-screen films. \$169.50. Special adapters available or on special order. VICTOR ANIMATOGRAPH.

For more information circle No. 108 on return postal card.

8mm Sound Projector Accessories. The 8mm magnetic sound projector, usable

either for sounding originally silent 8mm film that has been sound-stripped or for showing professional 8mm sound films (e.g. Castle or United Artist Associates), now has quite a list of available accessories. The Fairchild line includes a wide-angle lens and a telephoto lens each \$39.95; zoom lens \$89.95; exposure meter \$18.75; 3-channel mixer \$49.50; 8-inch speaker \$24.50; camera carrying case \$49.50; camera tripod \$24.50. FAIRCHILD.

For more information circle No. 109 on return postal card.

Slidemaster Introductory Kit includes Diazochrome film, mounts and accessories to make ten 5-color transparencies on the "Technifax Slidemaster System" (Proto-Printer; "Pickle-Jar" Developer; Technboard and Technistapler.) TECNIFAX.

For more information circle No. 110 on return postal card.

Reading Rateometer. New Model C paces at 140 to 5000 words per minute, as compared with the standard Model A (70 to 2500 words), and the Model

## New ECCO Improved Model D For 16mm & 35mm

Cleans — Lubricates — Prevents Dust Static

Speedroll Applicator #1500

Clean and inspect your film in one easy operation. Operates effectively at several hundred feet per minute. Save time, fluid, labor, and money. Lifetime bakelite construction. Eliminates waxing. Absolutely safe and NON-TOXIC . . . NON-INFLAMMABLE. Widely used by schools, colleges and film libraries. **\$33.00**

Ecco No. 1500 Applicator . . . . . \$33.00  
Ecco No. 1500 cleaning fluid, quart, . . . \$2.50  
Gallon . . . \$9.00

Ecco No. 2000 cleaning fluid for NEGATIVES . . . . . quart, \$1.95  
Gallon, \$6.50

**ALL FILM HANDLING SUPPLIES IN STOCK**  
Acetone, per quart . . . . . \$1.40  
Per gallon, \$4.50  
Ethyloid Film Cement, pint . . . . . \$2.00  
Film Handling gloves, per dozen . . . . . \$1.95  
Galca Filmetr stop watch, Swiss jewelled movement. Measures equivalent footage for 16mm and 35mm film . . . . . \$24.50

**THE CAMERA MART**  
1845 Broadway (at 60th St.) N. Y. 23  
Plaza 7-6977

## Good reasons for RCA projector popularity!

- "Life-Tested\*"—your assurance of projector quality!
- Easiest, fastest threading in the 16mm field!
- Whisper-quiet operation!
- Powerful 1200-watt lamp—throws 20% more light on screen!
- Built-in lubrication!
- Pressure guides are the "softest touch" in film handling!
- Nylon film pressure shoe—lasts 2 to 3 times longer!
- Superior sound reproduction!
- Longer operating life; minimum maintenance!

\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better, more reliable performance from RCA Projectors.

**RADIO CORPORATION  
of AMERICA**  
AUDIO-VISUAL PRODUCTS • CAMDEN 2, N.J.

B (50 to 500). Eye-Span Trainer attaches to any 2x2 slide or filmstrip projector for tachistoscopic training. \$7.95; slide set \$7.15; case and manual \$6.75. AVRES.

For more information circle  
No. 111 on return postal card.

Film Master screens now come in eight sizes, all seamless up to 70" x 70". Vyna-Flect beaded white materials, washable, fungus and lame resistant. \$22.95 to \$49.95. RADIANT.

For more information circle  
No. 112 on return postal card.

### SOUND, Equipment & Accessories

Teacher Console and Student Cubicles. Multi-channel student hook-up controlled from console. Manufacturer states system adaptable to having two

Founded 1940

37-02C 27th St., Long Island City 1, N.Y.

MRS. MARY LOU PLUGGE, *Chairman of the DEPARTMENT OF SPEECH AND DRAMATIC ARTS AT ADELPHI COLLEGE in New York*, finds her NORELCO 'Continental' tape recorder an essential tool in speech instruction. Here MRS. PLUGGE illustrates, to her lovely student CAROL SAMISCH, the proper way to produce a sound. MISS SAMISCH, in turn, repeats the sound into the tape recorder so that she may listen to an accurate reproduction of her own voice and compare it. Says MRS. PLUGGE, "My NORELCO tape recorder is valuable to me for a number of reasons. There is an impressive tone quality in its reproduction of sound. Concomitant with this is the aid of the mechanical pause button which allows me to stop to analyze progress without turning off the machine. The control over recording is such that the possibility of accidental erasure is completely eliminated." The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S6, 230 Duffy Avenue, Hicksville, Long Island, New York.

## GRASS-BLADE JUNGLE

Encourages upper elementary and junior high students to observe and understand the small animal world of the backyard. Introduces the arthropoda division of the animal kingdom, which includes insects, crustaceans, chilopods, diplopods, and arachnids. Explains the differences in simple terms. Extreme close-ups of many kinds of insects and spiders, sowbugs, and the millipede and centipede, reveal their particular habits. Photographed by August Lenax.

## Dual Track Lip-sync for 16mm Production

A magnetic sound recorder that assures perfectly synchronized spot sound weighs only seven pounds.

Magnasync's "Nomad" Model 816 attaches beneath any 16mm camera and is driven by the camera by means of a flexible cable. One half of its sprocket-driven dual track tape is used for lip-sync commentary and other spot sound

The "Nomad"

while shooting on location; the other half carries dubbed-in music and other sound added during editing. Simultaneous playback of the two tracks reportedly gives theatre-like results.

During projection the sound is held in sync by having the recorder-playback driven by the projector. The mixed sound may also be transferred to magnetically striped film for use on a magnetic projector. Nomad's transistorized amplifier is powered by self-contained rechargeable batteries. A remote sound mixer may be hand-held by a cameraman who is alone on location, making the shooting of synchronized sound shooting a one-man operation if need be.

## Levolor Woven Aluminum

Aluminum strip, pre-painted and then interwoven with nylon, is now available in a long line of colors and in two patterns: Tropic Weave and Tapestry. The latter, the top quality number, is interlaced with gold thread and more of an over-all design. The fabric, highly flexible, reportedly has exceptional resistance to corrosion or other weather deterioration. Levolor-Lorentzen, Inc., 720 Monroe St., Hoboken, N.J.

## Pledge Against Obsolescence

The board of directors of the Magnetic Recording Industry Association has recommended that all its members stamp their recorders and pre-recorded tapes with a pledge to continue the currently

dominant reel-to-reel 7½ ips tape "as long as the market exists," assurance against "unwarranted obsolescence," presumably by tape cartridge or possibly videotape developments.

## Non-Intermittent 16mm Projector

General Electric announces a non-intermittent television projector for 16mm film that adds brilliance to its projected image because it eliminates the "dark" periods of shutter passage, minimizes the showing of scratches by its diffused lighting reflected on the rotating tilted mirrors that follow the film in its passage over the gate, and compensates for shrinkage. This non-intermittent optical mirror principle has heretofore been applied experimentally only to 35mm projection. The projector was introduced at the NAEB convention in April.

## Florman-Babb—Advance

Advance Camera Corp., 60 W. 46th St., New York, will be operated by Florman & Babb, Inc., as their professional and industrial still photographic division.

## Lang-Lab for "Project Hope"

Electronic Teaching Laboratories, Washington, D.C., has donated a three-unit language lab to the floating medical training center that is to operate in Vietnam and Indonesia this fall as part of President Eisenhower's non-governmental People-to-People program of international aid. "Project Hope"

Maj. Gen. J. B. Medaris of Electronic Teaching Laboratories (left), Mrs. Wurjau S. Nugroho, wife of the minister general of the Republic of Indonesia, and Dr. William B. Walsh, head of "Project Hope."

(Health Opportunity for People Everywhere) is outfitting and staffing a moth-balled World War II hospital ship, the USS Consolation, for this project. The donated equipment will be used in concentrated language training aboard ship.

## Demonstration Merry-Go-Round

An audience of up to 20 people, seated on a turntable and rotated to face successive demonstrations and exhibits, is a feature of the Wilding Communication Idea Center. Changes are triggered by an "Automatic Program Control," a punched-tape device that opens and closes curtains and turns on lights.

## Rapidweld 8

"Rapidweld" treatment, heretofore limited to 35mm and 16mm film, has now been extended to provide similar cleaning and scratch removal service on 8mm film, according to Jack Bernard, president of Rapid Film Technique, Inc.

## Silver Threads for Colburn

The George W. Colburn Laboratory is observing its 25th anniversary. Today offering complete production services, its early start involved creation of machinery to do such jobs as 35mm to 16mm (and a little later to 8mm) reduction printing and direct 16 mm sound recording. Their anniversary announcement credits their various department heads and foremen with over 200 years of technical experience.

## Polaroid in Color

Dr. Edwin H. Land, president of Polaroid Corporation, thrilled his recent stockholders meeting by taking a standard Model 800 camera and flash-gun and making a color print of two Easter-hatted ladies in the front row.

(continued on next page)

Students prepare for language drill in this view of the Dictaphone "electronic class" in action. When teacher turns on "Time-Master" recorder-reproducer on her desk, students will listen to vocabulary drill she has prerecorded on small plastic "Dictabelt" record on desk directly in front of machine.

Dr. Land warned, however, that the marketing date "was quite some time away and had not been fixed." He reported preliminary first quarter figures of \$20,034,000—a gain of 36 percent over the same period in 1959.

### Bausch & Lomb Scholarships

Thirty-three finalists have been chosen from among 600 applicants for Bausch and Lomb science scholarships. They are winners of B&L honorary science medals.

## Delivers 5 Important Features for Greater Program Effectiveness

# VICTOR-SOUNDVIEW "PhD" COMBINATION FILMSTRIP-2x2 SLIDE PROJECTOR

**1. Sets up fast for filmstrip.** The "PhD" is foolproof. Use easy push-down threading to start the program and film advance lever to change pictures. You always obtain correct framing by means of a spring lock framing mechanism.

**2. Simplifies film review.** Want to go back over a portion of the filmstrip during a show? The "PhD" makes it simple to do with a built-in spin-back device.

**3. Converts to slide projector.** You can switch from filmstrip to

2" x 2" or bantam slides in seconds by using the heavy-duty slide carrier supplied with the "PhD."

**4. Protects film.** You never have to worry about overheated film—or burned fingers—when you operate a "PhD." Its cooling system is highly efficient. Ceramic edge glass pressure plates guard against film scratches.

**5. Shows sharpest, brightest pictures.** The "PhD" is a 500-watt projector to provide the screen brightness you need. Four-element optical system and highest quality 5" f:3.5

projection lens assure needle sharp pictures every time.

Add sound with Victor-Soundview "PB" Phonograph. Single case houses speaker, amplifier, 4-speed phonograph and projector. Complete with "PhD" projector, \$169.50. Phonograph alone, only \$80.00.

**AND BEST OF ALL—THE "PhD" COSTS ONLY \$89.50!**

Ask your Victor-Soundview dealer for a "PhD" demonstration soon.

**FREE BOOKLET**—Treasure Chest of Audio-Visual Ideas. For your copy—plus information about Victor-Soundview Projectors—mail coupon to Victor Animatograph Corp., Div. of Kalart, Plainville, Conn., Dept. 108.

# MONITOR—For Linguistic Excellence

## MONITOR FEATURES . . .

- SIMPLICITY OF OPERATION
- RELIABLE PERFORMANCE
- RUGGED CONSTRUCTION
- FUNCTIONAL FLEXIBILITY

### EXCLUSIVE, PATENTED DUAL-CHANNEL DESIGN

#### INSTRUCTOR'S MONITORING CONSOLE

MONITOR's standard Console gives the teacher control of the laboratory without requiring him to be an engineer or a switchboard operator. It can simultaneously conduct five separate course programs thus providing a variety of teaching materials to meet individual student needs. The console offers exclusive circuitry for private two-way communication, individual booth monitoring, program distribution to each booth or by rows and remote control of booth recorders for mass tape duplication.

#### STUDENT UNIT—TYPE I

Type I features the MONITOR E-3CS *patented* dual-channel recorder which enables students to listen to the master channel while simultaneously recording their own voices. Just two controls plus an on-off, volume switch assure simplicity of operation. Thus, students can perform operations by reflex action—and concentrate solely on the lesson material.

#### STUDENT UNIT—TYPE II

Type II includes a tube or transistorized amplifier and an activated headset-microphone. It enables each student to speak and listen to his voice simultaneously. It also provides for intercommunication between the student and teacher.

#### Additional System Oriented MONITOR Equipment

**MONITORET**—A simplified version of the MONITOR E-3CS for home study with prerecorded tapes . . . **REMOTESTER**—Automates testing by stopping student tapes during questions and restarting them for recording answers only . . . **AUDIO-VISUAL SYNCHRONIZER**—Automatically coordinates visual presentations with prerecorded tapes or with the instructor's microphone.

Our rapidly expanding school population makes a teacher for each student an idealistic concept. Yet, educators agree there is an increasing need for teaching techniques that meet the varied capabilities of each student.

In the field of language teaching, the MONITOR Language Laboratory System offers the teacher the best means to achieve this objective. MONITOR today is the *only* language laboratory standard of the United States Government . . . the result of twelve years of product design and development. MONITOR is the product of first hand experience in installing, maintaining and directing hundreds of language laboratories in 51 countries.

To the student, MONITOR means more intensive learning through repetition, active use of new word sounds, and objective comparison of his own voice in playback.

To the teacher, MONITOR means the opportunity to meet student needs on an individual basis. As an easily operated and highly flexible teaching tool, MONITOR adds a new dimension, *tutorial supervision*, to the science of language teaching.

The coupon below is for your convenience in obtaining more information regarding a MONITOR Language Laboratory for your school . . .

## Joint Meetings, More Booths Announced for NAVA Show

Groups from the fields of education, medicine and industrial training are among six organizations which have announced meetings to be held in connection with the 20th annual National Audio-Visual Convention in Chicago, August 6-9, 1960. A total attendance of 3,000 audiovisual specialists is forecast for this year's gathering.

The organizations which will meet in connection with the 1960 Convention, according to NAVA, and the dates of their meetings, are as follows: AV Workshop for Industrial Training Directors, August 8; Illinois Audio-Visual Association, August 6; Industrial Audio-Visual Association (mid-western region), August 8; AV Conference of Medical & Allied Sciences, August 8; Board of Directors of the Department of Audio-Visual Instruction, National Education Association, August 6-7; National Audio-Visual Association, August 6-9.

The latest products in audiovisual communications will be displayed by more than 130 manufacturers and producers. This year's exhibit will feature a record number of new products, according to NAVA, including projectors, recorders, language laboratory equipment, projection screens, light control equipment, educational TV equipment and a variety of materials. Displays, originally scheduled to occupy 200 booth spaces, will be expanded by the availability of an additional 30 exhibit booths. The East Room of the third floor, where the Saturday night dance has customarily

been held, will be pressed into service as overflow exhibit space.

Most of the sessions of the various groups meeting in Chicago are open to interested users of audiovisual materials and equipment upon payment of a small registration fee. Information about the convention and the exhibit can be obtained from the National Audio-Visual Association, Fairfax, Va.

## ILLAVA Sponsors Forum At National AV Meet

The Illinois Audiovisual Education Association has taken the initiative in setting up a free and frank forum on currently "hot" topics confronting audiovisual professionals. Sister organizations in nearby states are joining in the arrangements. At this writing the DAVI affiliates in Minnesota and Michigan have indicated co-sponsorship with Illinois. The program is particularly timely in view of EFLA's discontinuation of its national summer meeting to avoid detracting from its American Film Festival in New York in early spring.

Blue Ribbon winners in that festival will make up most of the discussion program at Chicago's Morrison Hotel on Saturday, August 6, starting at 9:30 a.m. Sunday is left open for attending the audiovisual worship service and NAVA trade show exhibits.

Starting Monday morning there will be panel and audience-participation discussions of open questions such as "Can machines teach—what, who, how, why?"—"Experience reports on NDEA"—"Does the current science-math stress depreciate respect for the

### Department of Unconscious Humor

A classified ad in the Toronto Globe and Mail:

See our complete line of Photographic Equipment—  
Don't miss our Ordeal-Visual display . . .

humanities?"—"Just what are our CCTV installations delivering?"—"Where does AV fit into the school library and vice versa?"—"Is didactic technology promise or menace?"—etc.

Invitations have been extended to school administrators, supervisors, AV coordinators. Everyone, whether from classroom or industry is invited to join in an old-fashioned free-for-all reminiscent of the way the Midwest AV Forum of World War II discussed "Can the Schools Teach the GI Way?"

All planning to attend, and especially those willing to take part in the program, are urged to get in touch with either of the co-chairmen designated by ILLAVA, Reynolds Hungerford, Visual Instruction Department, Chicago Public Schools, or William F. Kruse, *Educational Screen and Audiovisual Guide*.

## Green Lake Workshop at U. of Colorado in August

The 17th International Conference on Audiovisuals in The Church known more widely as the "Green Lake" workshop, will convene August 17-23 at the University of Colorado in Boulder.

Approximately 150 invited consultants will study and discuss the possibilities in the next five to ten years for in-church audiovisuals.

A morning seminar will devote five sessions to "Communication and Production"; five afternoons will be spent on "Training for Utilization." Resource leaders will be drawn from the university faculty as well as faculties of other higher education institutions, executives of general church agencies, public school AV specialists, and producers.

## New Film to Promote '61 DAVI Convention in Miami

The Florida Audio-Visual Association reports availability of two print

Carl Nater, left foreground, of Walt Disney Productions, discusses with Philippine school officials the role of films in the school program. Nater was in the course of a world tour to survey needs for educational films.

# Is he learning...

*or just being entertained?*

*He's learning...if* the classroom audio-visual equipment is designed, as only Bell & Howell equipment is, to be an active educational aid rather than a medium of entertainment. The full benefits of teaching with audio-visuals can be achieved only through built-in features and controls that make the teacher the *complete master* of the lesson rather than a bystander. Only Bell & Howell gives these to you, along with unmatched ease of operation.

The school administrator gets the assurance of long, trouble-free equipment operation, and the certainty that the school has

gotten the best value for its money. Program assistance and service is provided by an expert Bell & Howell Audio-Visual Representative in your area.

If you're going to specify audio-visual equipment soon... if you're interested in the added teaching power audio-visuals can give your school... write us today. There's no obligation. Education Dept., Bell & Howell, 7117 McCormick Rd., Chicago.

Qualifies for purchase under  
Public Law 864. (National  
Defense Education Act).

399AV. Stops on single scene for class discussion. Reverses instantly, lets you repeat scenes until they are clearly understood.

Filmosound 302. Add high-fidelity magnetic sound to any 16mm film, automatically. Doubles the value of language teaching film.

786AV-1. 2-Channel Tape Recorder. Teacher records lesson on one channel. Student listens, records answers on second channel.

724 Slide and Filmstrip Projector. Simple instructions on projector. Projects even in semi-lighted room to permit note-taking.

FINER PRODUCTS THROUGH IMAGINATION

**Bell & Howell**

# Saturation For Impact

*Paul C. Reed*

What would happen if, in a single classroom, you were to provide for a single teacher a saturation opportunity for the use of audiovisual materials and equipment? This teacher would have everything audiovisual he wanted and more—films, filmstrips, micro-recording equipment, motion picture cameras, and expert professional assistance in the use of all these things. What would happen to his teaching? What would happen to the pupils?

The story of such a study in saturation is reported at length in this issue of *Educational Screen & Audiovisual Guide*. It is particularly appropriate to have this story in a *Blue Book* which again lists hundreds of new audiovisual materials released during the past year, new materials that most teachers have not been able to use because we haven't yet found the way to overcome the obstacles preventing teachers from making use of audiovisual materials and equipment.

Most teachers are blocked from using AV materials by the same major obstacles listed in this "study in saturation." But the teacher who participated in this study was fortunate enough to teach in a school system where these obstacles had been overcome. Yet the use of audiovisual materials had not been remarkable. What more was needed? What would happen when it was supplied? This is an exciting story and one well worth your attention and thought.

While reading it, think about this: What would happen if the conditions of this study were multiplied by fifty or a hundred? Suppose that in one large high school somewhere, we could provide all the teachers of that school with optimum conditions for use of audiovisual materials and methods? What equipment would be needed? What kind of building facilities? What kind of special assistance, supervision and clerical help? What materials? Then when the conditions were right for maximum effective use of audiovisual materials in the instructional program, what would happen to teaching and learning!

Surely somewhere there must be imaginative educators with money and the knowledge and the ability to carry on such a large saturation study. Where are they and when will the study get underway? But wait! One school isn't enough. This saturation study idea should be expanded to a whole school system.

"Think how remarkable it would be if there could be even one school system in this country with a *complete* audiovisual program—even one—where there could be an all-out demonstration of audiovisual methods of teaching. Think of the value of such a demonstration! . . .

"There's an idea and a terrific one! . . . worth the attention and effort all to bring it about. Where are the leaders in education and the audiovisual field who can take this eminently practical proposal and convert it to reality?"\*

We think the greatest value to come from such a study would be its convincing force as a demonstration. Superintendents and other school leaders would come from all parts of the country to see for themselves. The demonstration would out-Hagerstown Hagerstown. It would be concerned with more than a single media for communication. It would integrate into teaching *all* of the modern means of communicating ideas, information and inspiration. It would provide a massive demonstration of all the conditions and problems related to making maximum use of all the products of technology in a modern instructional program.

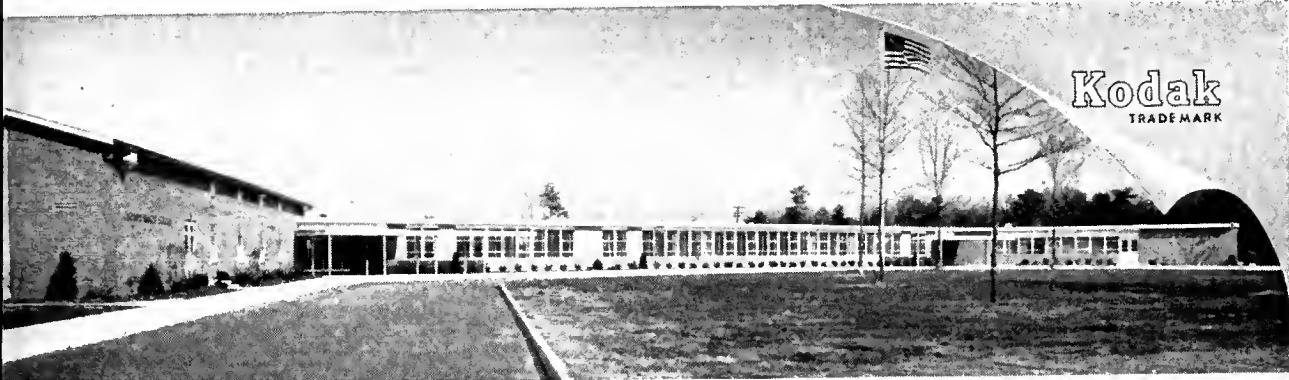

Such an extensive saturation study would have immeasurable impact for breaking down the barriers that block the way to using the materials and equipment we now have.

---

\*For the studious or curious reader who wants to know the source of this quotation, we refer him to *Educational Screen*, Volume XXVIII, Issue Number 10, page 442.

Kodak  
TRADE MARK

*At the New Gardiner Manor Elementary School, Bay Shore, Long Island, N. Y., selected by A.A.S.A. for its exhibit of outstanding school designs, Michael Furin, Visual Aids Coordinator says:*

**“Even fourth and fifth grade boys  
operate our Kodak Pageant Projectors.”**

“These nine and ten-year-olds completely set up the projector and get the movie ready to go while the teacher prepares the class for what it’s about to see.

“Our Kodak Pageants long ago proved they were easy enough to operate and could withstand the sometimes overzealous handling by young boys. So, we have given our Audio-Visual Club youngsters the responsibility of not only moving the projectors from room to room, but also of complete operation.”

There are three reasons why even children can operate Kodak Pageant 16mm Sound Projectors. 1) No parts to fool with. Reel arms, belts, cords are all permanently attached. 2) Threading is simple. The red-arrowed threading path is printed right on the machine. 3) Operation is a matter of flipping one switch.

# Classroom Experiment Shows 'Saturation' AV Gets Results

by Samuel Cohen

*Samuel Cohen is administrative assistant in the office of the superintendent of schools, Union Free School District No. 14, Hewlett, N. Y. He is also president of the Long Island Audio Visual Council, now marking its 25th anniversary (see p. 320).*

**T**HIS is the report of one study in "saturation." It describes the effects of creating a particularly desirable "saturation" situation for audiovisual instruction. This situation was established for a teacher and his class in an excellent school system already enjoying the services of one of the best audiovisual departments in the nation. The "saturation" consisted of the following elements: (1) Every major type of audiovisual equipment was placed in the classroom for the exclusive use of the teacher and his pupils. (2) Audiovisual and other instructional materials were obtained upon request within 24 hours. (3) Training in the operation of equipment was provided upon request for the teacher and the pupils. (4) Curriculum consultation was made available to the teacher, upon his request, during or after school hours. This report contrasts the audiovisual utilization during the saturation period with that of the preceding period of observation of regular classroom functioning.

## *Purpose of the Study*

Research has proven the potential value of audiovisual equipment and a variety of instructional materials in improving the teaching-learning process. Nationwide attention was focused upon audiovisual instruction during World War II when the armed forces made extensive use of materials and equipment. Since then increasing public notice has been stimulated by developments in motion pictures and television, by increasingly effective work on the part of educators interested in audiovisual instruction, and by

such recent stimuli as the National Defense Education Act of 1958.

Despite these things, realization of the audiovisual potential in the classroom has been slow. Regional and national studies have pointed out seven major obstacles to more rapid classroom acceptance of audiovisual instruction:<sup>\*</sup> (1) lack of teacher interest; (2) insufficient funds for support of audiovisual instruction; (3) equipment and materials that are obsolescent or limited in amount and variety; (4) a shortage of trained leadership; (5) inadequate administrative organization for audiovisual instruction; (6) failure to convince boards of education, principals and/or the community of the value of audiovisual equipment and materials and (7) the lack of adequate evaluation procedures for audiovisual programs.

Suppose that these obstacles were removed. Would we then close the gap between the potential and the actual realization of the value of utilizing equipment and materials in the classroom? In the study reported here, it was decided to select a school system which had overcome seven of the obstacles. After observing teaching practices in audiovisual instruction in this system, the following hypothesis would be tested: If, in a situation where one of the better audiovisual programs is operating, an effort were made to remove all possible obstacles to the utilization of audiovisual equipment and instructional materials, then there would be an appreciable increase in the amount, variety and quality of utilization.

## *The Local Situation*

The selected school system had not only overcome the major obstacles but was considered

<sup>\*</sup>For a list of the studies utilized in determining the major obstacles to effective audiovisual instruction, see the references at the end of this report.

leaders in the audiovisual field to have one of the better audiovisual programs in the nation. The community and administration supported the program generously, as evidenced by the magnitude of services offered and by the large annual budget. Supervising the program was a professionally trained full time director of audiovisual services with two full-time assistants in addition to secretarial and clerical help.

There was a large central materials library with well-organized and smoothly-operated systems of storage, maintenance and distribution. Each school building had its own substantial materials library and a good deal of equipment and the building coordinators were trained to administer these things. Both evaluation and in-service programs were provided and informational literature such as catalogs, bulletins, source materials and guides were readily available to all teachers in the district. Following a modern program of education, the district achieved excellent academic results. The elementary school selected for the study had self-contained classrooms of some 30 students each. All audiovisual materials were stored and distributed in the school library, and there were 50 pieces of equipment available in the building.

### *Design of the Study*

A male teacher who was interested in audiovisual instruction and in the proposed study was selected from five sixth grade teachers to become the cooperating teacher. The entire study was made in one classroom with this teacher and his 30 pupils.

The study was divided into two parts. First, there was an observation period to determine the teacher's pattern of utilization of equipment and materials with his class. Following a short transition period at the close of the observation period, the second phase of the study began—the saturation period.

During the saturation period, all possible obstacles to the utilization of audiovisual equipment and instructional materials were removed, while the observer again collected data to compare with those of the observation period. During this period the teacher and his pupils had available in their classroom, at all times and for their exclusive use, the following equipment: an optical-magnetic 16mm motion picture projector, a three-speed phonograph, a tape recorder, a filmstrip-slide projector, a micro-projector, a lantern slide projector, a 21-inch table model television receiver, an AM-FM radio, an opaque projector, an overhead projector, a shadow-box screen, two microphones, a complete 35mm still camera outfit and a complete 16mm motion picture camera outfit, all brand new and of good quality. In addition, every effort was made to obtain all requested instructional materials on 24-hour notice and assistance was provided in planning and executing classroom utilization of equipment and production of materials by the teacher and/or his pupils.

Improvements were made in the classroom's physical facilities to encourage use of the various types of equipment and materials. Operator service was provided for all the equipment whenever

requested and the teacher, as well as students designated by him, were trained in the operation of equipment. Curriculum and materials consultation service were provided whenever the teacher desired it.

Two basic policies were agreed upon and carefully adhered to during the entire time of the study: the initiative for the utilization of all equipment, materials and services would remain at all times in the hands of the cooperating teacher, and the normal class program and procedures were to be followed without modification. Equipment, materials and services would be used by the teacher with his students only as he saw opportunities for improving the learning experiences which had already been planned, in order to make them more meaningful, concrete, interesting, efficient, and permanent.

### *Results of the Study*

There were substantial increases in the amount, variety and quality of utilization of equipment and materials during the saturation period as had been hypothesized. Despite the previous well developed and well organized program in the school district and the teacher's interest in audiovisual instruction, there had been rather limited use made of the available equipment and materials during the observation period.

Equipment utilization increased from six instances during the observation period to 53 instances during the saturation period, 19 of the latter cases occurring in the absence of the observer and reported to him by the cooperating teacher. Variety of utilization increased from three types of equipment during the observation period to 11 types during the saturation period.

The utilization of instructional materials, exclusive of books, increased in quantity from 12 instances during the observation period to 108 instances during the saturation period, 38 of the latter in the researcher's absence. Five types of materials were used in the observation period, while 17 types were utilized during the saturation period. These included class produced bulletin displays, duplicated materials, maps, a film, posters, slides, table displays and a tape recording, along with commercially produced films, filmstrips, flat picture sets, maps, disk recordings, posters and slides. In addition, six visitors from other nations were invited for specific purposes in connection with the social studies program.

Quality of utilization improved during the saturation period. The teacher became more discerning in his selection of materials, and previewed all materials before using them with the class. Not only did his own ability to evaluate materials improve but he was also able to teach his students to serve on evaluation committees to determine whether suggested materials should be shown to the class or merely reported upon by the previewing group. Thus there was an increase in pupil participation in and responsibility for decisions concerning materials utilization.

Pupils were better prepared for the materials which were to be used, and follow-up activities improved with experience. By the end of the saturation period, class procedure included the use of equipment and materials as a normal and integral part of a lesson rather than as a special

event breaking up the learning pattern. Both teacher and student production of materials improved in appropriateness, design, use of color, involvement of the viewer, and in attention to details such as simple, clear titling and attractive lettering.

Perhaps most significant of all, both teacher and pupils became aware of the qualities, potentialities and limitations of various types of equipment and materials which promised to carry over beyond the study and lead to further maturity in utilization.

### *Conclusions of the Study*

Although this was a single study involving only one teacher and his pupils, a number of conclusions appeared forcefully from the data collected. In addition, a number of questions were raised for which the data could provide no answers but which seemed worthy of further study to find the answers.

1. *Consultant service must be added to full availability of equipment and materials before a meaningful, vital program in audiovisual instruction is possible.* Ready access to equipment and materials is necessary for a good program, but it is not enough just to improve quantity of utilization. Too many audiovisual directors find most of their time taken with purchasing, ordering, training and supervising the training of student operators, storing, distributing, and supervising the maintenance and repair of equipment, producing catalogs, files, bulletins, transparencies and special materials, and scheduling, distributing, maintaining and replacing instructional materials. Personal contacts with teachers are usually concerned with emergency situations involving mechanical failures rather than educational needs.

Under such conditions, quantity and variety of utilization can be increased but as soon as quality of utilization becomes a major concern the audiovisual specialist becomes a curriculum consultant as well. He must work with each teacher to help him select and more effectively integrate and utilize equipment and materials to improve the learning experiences of the pupils. The consultant cannot merely tell what there is and how to get it. He must know the curriculum and techniques for curriculum improvement as well as the equipment and materials field if he is to serve teachers properly.

2. *The personal inter-relationships of teachers and the consultant are of primary importance in determining the success of a program.* Poor personal relationships can cancel the consultant's potential contribution. Mutual confidence and respect must be established, and the consultant must convince each teacher that he can provide a valuable service and is not a braggart, nuisance or a threat to the position of the teacher.

3. *A great deal of time is required for the utilization of audiovisual equipment and instructional materials and the consequent realization of worthwhile educational results.* On the basis of this study it can be said that a teacher will put more time and effort into the utilization of materials and equipment as his interest in them grows and as he obtains increasingly valuable

results from their use in the classroom. However further study is required concerning the amount of a teacher's time that may justifiably be devoted to the utilization of equipment and materials. Such a study would be part of a general examination and definition of the various demands upon a teacher's time and of that amount of time that he may reasonably be expected to devote to his professional activities during and after school hours. Such research would of necessity be made against a background of salary levels and the length of the school day and year.

It is obvious that every effort must be made to prevent the dissipation of professional teacher time in clerical work or unnecessary red tape procedures. As time expended in audiovisual instruction becomes more productive it yields greater satisfaction which helps stimulate the desire to continue this kind of work.

4. *The proper utilization of audiovisual equipment and instructional materials can enhance existing educational experiences and also provide new ones.* Researcher, teacher and pupils agreed that the use of more and more varied instructional materials provided broader and richer experiences for the class and made the work more interesting, meaningful and exciting. The amount of pupil reading increased along with the increase in the use of audiovisual materials during the saturation period. There was also a better comprehension of the materials read due to the teacher's developmental reading program and to the stimulation provided by experiences with new ideas, materials and persons during the saturation period.

5. *Pupils as well as teachers need to learn improved utilization of equipment and materials. This takes time and assistance.* Individuals must be taught to gain the greatest benefit from a motion picture or recording or television program just as they must be taught to distill more than the story line from a book. Both types of skills are required in and out of school in today's world of multiple-media communication. Investigation of effective means of providing such training in our schools would be a worthwhile study under the National Defense Education Act's research program.

6. *There appears to be more utilization of audiovisual equipment and instructional materials and more production of materials in a classroom where work is carried on in an informal, flexible manner and where pupils share in the planning, execution and evaluation of their work, as opposed to a traditional, formal classroom.* Within the cooperating teacher's classroom there were contrasting situations to compare. Spelling and arithmetic were taught in a traditional manner by following a course of study and a formal organization while science and social studies were taught with the unit approach, group planning, committee research and reporting, pupil production of materials, pupil evaluation, etc. It seemed that the variety and flexibility in the teaching of social studies and science allowed for a relatively easy introduction and incorporation of new ideas, materials and equipment without the disturbance of any set procedures. Most of the utilization of equipment and materials was in social studies and science but there

### Mr. Cohen: "Let's Measure Quality"

"Better methods are needed for evaluating the contributions of the utilization of equipment and materials to the education of children. When quality rather than quantity is to be measured, there is a lack of efficient tools, techniques and procedures for doing a thorough job. This . . . would provide us with the beginning of educational "quality control" so that the quality of teaching and learning may be measured while the process is underway . . ."

as almost none in spelling and arithmetic, a difference that could not be accounted for by the greater availability of materials in the former subjects or by their subject matter.

7. *Once a teacher endeavors, with the help of consultant, to make more and better use of materials and equipment, the initial effect seems to be a wealth of ideas and a widening of perspective at a rate more than commensurate with the effort expended.* As each idea was conceived and successfully tried, a flood of new ideas came to the cooperating teacher and led directly to much more use of equipment and materials. The results improved regularly and the teacher then showed more desire to continue his efforts in audiovisual instruction. There was increasing desire and ability to integrate equipment and materials, equipment and production, and materials with other class experiences. Later the teacher began to see applications of his work to other classes and other schools in the system. While it seems likely that this unusual rate of development would decrease after the first few months, it can be of great advantage to the consultant and the teacher while it is so high.

8. *Children, like adults, respond to what they consider to be special concern over their welfare.* Changes made for the benefit of the pupils resulted in increased effort on their part. A teacher must be careful, as the Hawthorne studies of effects of changing working conditions in a factory showed, that the changes made are really improvements upon the existing situation. Observing this caution, a teacher is free to utilize and benefit from the realization that change, variety and excitement in the classroom will result in high pupil interest, effort and attention.

9. *Equipment and materials utilization were most valuable in this situation when directly related to first-hand experiences.* As a rule, the teacher and pupils began by clearly establishing the goals of a coming unit of work. Next, first-hand experiences were selected which seemed most likely to help them achieve their objectives. Then, around these experiences and in terms of their general goals, specific purposes were established and the utilization of various instructional materials integrated into the planning of activities for the unit. Seeing things, meeting people, discovering information and feelings by questioning individuals and getting to know other human beings were the things that the pupils found to be the most valuable bases for understanding in a unit of work. Equipment and materials added the further dimensions to the first-hand experiences, and class discussion molded all of the

elements of the unit into a meaningful whole. One boy clearly expressed this when he wrote that "the visitors were most important in our study of understanding other peoples, but I feel we would have gained little from them without the books and movies and other equipment."

#### Questions Raised by the Study

Important questions were raised during the study which seem to have sufficiently important implications for the fields of curriculum and materials to warrant further discussion.

1. *With how many teachers can one consultant work effectively?* Offering all of the services available to the cooperating teacher, the researcher on a full-time basis would not have been able to work with more than two teachers. It is important to ask, "With how many teachers can a consultant work and still be a vital force in the professional development of each?" It would be important to establish the point at which the number of teachers becomes so large that the consultant can no longer work with individuals and begins to function with groups. Is a consultant more important and effective in his position when working with individuals? If so, might he best use his time by working with individuals for an initial period until each has gained sufficient knowledge and skill to require less concentrated attention, and then working with large groups as in workshops or in-service courses? Finally, should a consultant work only with teachers, or with teachers and pupils?

2. *Would a reclassification of instructional materials make teacher utilization easier?* The average teacher must obtain materials from a variety of sources including the principal's office, the library, the shop or other special activity rooms, and the office of the audiovisual director. Maps may be handled by the audiovisual director in one system, and in another by the assistant principal who orders textbooks. A piano may appear in the audiovisual budget in one district, and in the music budget in another district. The curriculum director may have certain materials, guides and handbooks in one system, and the audiovisual director will handle the same ones in another.

In either case, the director not handling the materials often has no idea that they exist. A common agreement as to the point of demarcation between audiovisual materials and instructional materials, if any, would greatly strengthen the professional group. Should all materials be classified under the Dewey Decimal System?

(Continued on next page)

This is a controversial question in many school systems. It would seem that the best approach might be an attempt to reclassify all instructional materials from the point of view of the teacher, that is, in terms of the function of the materials rather than administrative considerations.

3. *Can radio and television become vital classroom materials of instruction?* Many educators see radio as a basic teaching medium, and also see television rapidly becoming one. Others insist that neither radio nor television belongs in the classroom due to difficulties in programming and scheduling and excessive cost. Programming does seem far from satisfactory and scheduling provides many problems indeed.

It would seem well worth careful objective study to determine whether nursery, adult and in-service education via radio and television, along with out-of-school listening and viewing, are not better areas for development than in-school listening and viewing. The comparative value of "live" programming at a fixed time and tape-recordings and kinescopes which may be used at the discretion of the teacher and pupils needs thorough study. If classroom listening and viewing should turn out to have real merit, much more study is needed before effective utilization can take place.

4. *Should audiovisual equipment be redesigned specifically for school use?* Many mechanical difficulties were encountered with new equipment during the study, and considerable time was devoted to training children to operate the various types of equipment used. Storage and ready availability for use were problems not easy to solve with 19 pieces of equipment in the classroom. Some thoughts and questions presented themselves concerning the design of equipment and are presented in the hope that they may stimulate further study, perhaps by a committee of the Department of Audio-Visual Instruction of the N.E.A. under a research grant through the National Defense Education Act.

Every individual piece of equipment should be simple, rugged and fool-proof. Each one should perform a limited number of operations well and for a long time. Controls should be few, simple, large, clearly labelled and color-coded. As many parts as possible, including fuses, lamps, carriers and cartridges, should be standardized and interchangeable. Motion picture projectors, for example, having too many different and difficult threading and rewinding patterns, are usually referred to as being too noisy and as being frightening to female teachers. Instead of more pre-service and in-service training, is it unrealistic to envision a projector which is completely silent, automatically self-threading, automatically self-rewinding, containing a horizontally placed projection lamp and sealed lifetime-lubricated bearings in as compact a unit as possible, with four large lever or switch controls on the outside: Motor, on-off; Lamp, on-off; Volume and Tone Control; Focusing Control? To cite one more case, is it necessary for all buyers of audiovisual equipment in schools to jump on the four-speed phonograph bandwagon? Shouldn't some grade levels or departments have three-speed machines, some two-speed, and some only single-

seed machines? Wouldn't this make possible phonographs which need less maintenance and repair work?

Another possibility is the production of a single machine to combine the functions of a number of existing ones. With a single lens system and a single light source, a rotating central unit might house a series of individual elements: motion picture projector, filmstrip-slide projector, opaque projector, and lantern slide projector, for example. Each of these elements could be removed for repair without impairing the functioning of the rest, and storage for each type of material would be provided in the machine. Addition of drawers below the projection area for turntable and tape recorder decks with common amplifiers and speakers might result in a master unit capable of being built into new classrooms in new buildings and paid for over the 30 years of the bond issue instead of from capital outlay.

School districts now comprise an enormous market and are in a position to ask for equipment designed to meet their specific requirements. Audiovisual specialists, through their national professional organization, could make a contribution by drawing up national specifications for the most-used types of equipment which, when adopted by groups throughout the country, could be presented to the manufacturers' departments of research and development.

A final caution remains to be expressed. Any group concerned with new specifications for equipment must consider the possibilities of the practical application of video tape to school use. Coaxial cables can carry open and closed circuit television programs, motion pictures, recordings, flat pictures and slides from magnetic tape in a school's audiovisual center to flat screens in every classroom, we have exciting vistas opening before us.

5. *How can techniques of evaluation be improved?* Better methods are needed for evaluating the contributions of the utilization of equipment and materials to the education of children. When quality rather than quantity is to be measured, there is a lack of efficient tools, techniques and procedures for doing a thorough job. This could be another valuable area for research under the National Defense Education Act and could provide us with the beginning of educational "quality control" so that the quality of teaching and learning may be measured while the process is underway, after benchmarks are reached, and after the entire work of the school is completed.

It was revealing to discover obstacles and problems of considerable dimensions in a school system with an excellent department of audiovisual services and with staff members of outstanding ability and enthusiasm for their work. It is hoped that others in the fields of curriculum, teaching and instructional materials may share the findings and implications of this study and then contribute to the further removal of obstacles impairing the quality of their audiovisual and consultant services. Improved services can facilitate better utilization of audiovisual equipment and instructional materials as teaching tools to promote better learning.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Mother Love

(Carousel Films Inc., 1501 Broadway, Suite 1503, New York 36, New York) Produced by CBS Television Network. 28 minutes, 16mm, sound, black and white, 1960. \$135.

### Description

*Mother Love* demonstrates, through a number of unique experiments, that the single most important factor in an infant's love for its mother is that of body contact, holding and nestling and that deprivation of this can cause deep emotional disturbances, even death.

Opening scenes show an adequately-nursed and well-cared-for orphan rhesus monkey rolling about and pathetically whimpering because the only companion he has known, a cheesecloth pad, is taken away from him. The commentator says, "Until it is replaced, this monkey will remain troubled and distressed. Permanently deprived of it, he may die of loneliness, die for want of love."

But what is love? More specifically, what is an infant's love for its mother? In his laboratory at the University of Wisconsin, Dr. Barry Harlow conducts experiments to find the key to the bond between mother and child and to understand the effects of denial of maternal love. He uses rhesus monkeys as subjects and tests their reactions to two inanimate substitute mothers—one made of wire and another covered with cloth.

One experiment demonstrates that though the wire mother nurses the baby, he spends less than an hour with her and spends the rest of the time with the cloth mother. Other babies act the same way. They go to the wire mother to nurse and to the cloth mother for comfort.

When a fear stimulus is introduced in a cage where both mothers are present, the baby always turns to the cloth mother for comfort and reassurance. Likewise when a baby is placed in a strange new surrounding, the presence of the wire mother gives him no reassurance. He moves about with caution, searching for comfort. As soon as

the cloth mother is brought in, he runs to her and when he is relaxed, the fear having disappeared, he goes out to explore the new world with confidence.

A one-year-old monkey who has been separated from his wire and cloth mothers for six months still remembers his cloth mother. He surmounts the barrier and the fear stimulus to run to his cloth mother for reassurance.

Another monkey, recently given a cloth mother after having been deprived of contact comfort since birth, has learned in a few days to go to her. However, when given the open field test wherein a fear stimulus is introduced into his cage, he does not go to his cloth mother. He just huddles in a corner rocking to and fro in fear because he has no real affection for his cloth mother. When given a choice—to run to the cloth mother or away from the fear stimulus—he chooses the latter. Unlike the other monkeys who go to their cloth mother out of a sense of well being, the deprived monkey is interested only in escape; he has not learned how to replace fear with love; he has no real sense of security.

Other experiments demonstrate that monkeys, like children, enjoy playing with friends. However, in the face of fear, love for the mother is stronger than the affection between friends.

Dr. Harlow concludes that love or its deprivation has an extremely important effect on personality. The critical period in the development of an infant monkey is between 30 and 90 days; in human beings, between three months to one year. If a monkey or a human being has not learned to love by then, he may never learn to love at all.

### Appraisal

This excellent record film does an outstanding job of defining and measuring what has previously been undefined and unmeasured—an infant's love for its mother. It calls parents' attention to the importance of physical contact (cuddling) for children. Other adult groups, aside from parents, would find it interesting in discussion of

the nature of love and emotion.

This film would find its greatest use in university classes in comparative psychology, general psychology, social anthropology, social psychology and nursing education.

This film is one of a series of films distributed by Carousel which were recently presented to television audiences as part of the CBS Television *Conquest* series.

—Herminia Barcelon

## Microorganisms That Cause Disease

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1960. \$110 or \$60. Teacher's guide available.

### Description

Using animation, cinemicrography and live-action photography, *Microorganisms That Cause Disease* presents the five types of pathogenic microorganisms and indicates the role of each in disease and the resultant cell destruction. The film points out that pathogenic organisms are found among each of the five kinds of microorganisms—fungi, bacteria, viruses, rickettsia and protozoa. The organisms are seen to enter the body by way of the circulatory system where they produce toxins which poison the body, and by way of the lymphatic system. It emphasizes that all are parasitic and that the destruction of healthy tissues is the ultimate effect of invasion by pathogenic microorganisms.

A severe case of athlete's foot which is the result of a fungus infection, is shown; photomicrographs show the responsible organism.

The pathogenic bacteria are presented as the principal cause of our more serious infectious diseases. The film emphasizes the nearly universal distribution of bacteria and pictures several pathogenic types. Although the ultimate cause of cell destruction by bacteria is not known, the film indicates that the secretion of enzymes by the bacteria is thought to play a significant role in the process. ## DAGE MOBILE TV brings studio broadcast quality to any classroom

Broadcast quality equal to that of professional TV studios is achieved by the Dage Educational Television System (ETS-1) . . . and it is completely mobile! Moves on silent casters through classroom doorways. Included in the system is the Dage 320-B series vidicon TV camera and console control center. The versatile 700-line resolution camera is

equipped with electronic viewfinder, hood, four-lens turret and tripod. It gives excellent picture quality, even of microscopic materials. Attractive console contains video monitors, camera controls, sync generator power supply and wave form monitor. Modular construction of console makes it easy to maintain and operate . . . accommodates optional equipment as

needed . . . will broadcast on micro-wave for intra-school networks. For complete details about the Dage ETS-1 write for our free catalog, or request consultation with a Dage representative.

**DAGE TELEVISION DIVISION**  
Thompson Ramo Wooldridge Inc.

2607 West 10th Street, Michigan City, Indiana

struction by pathogenic bacteria portrayed in the breakdown of human blood cells by a toxin produced by streptococci and in a sore produced by bacteria on the skin of a rabbit.

Next, the extremely small size of viruses is emphasized as the narrator states that most can be seen only with the aid of the electron microscope. The fact that viruses have no independent metabolism is given as a major difference between them and other types of microorganisms. Because of this they can grow only within living tissue cells. Several types of viruses are seen, and cell destruction by the polio virus is depicted by means of slides observing sections of a spinal cord before and after virus infection. A mouse is infected by pneumonia virus, and the results of the infection are portrayed as the dissected lung of a normal mouse is compared with the lung from an infected animal. Cell destruction by the viruses is further shown as cultures of human tissue are infected by adenovirus. A series of micro-views shows the progressive destruction of the human tissue.

The rickettsiac are microorganisms which resemble bacteria in structure. However, like viruses they grow only in living cells. These microorganisms are transmitted by the bite of certain insects and the tick which is pictured.

The protozoa are represented as the lowest form of animal life. The tremendously diverse form of the protozoans is emphasized. The pathogenic varieties which cause amoebic dysentery and African sleeping sickness are described. The destruction of red blood cells by the protozoan causing malaria is portrayed graphically by the use of animation.

The film emphasizes that diseases caused by pathogenic organisms are most prevalent in areas of the world where people live in crowded, unsanitary conditions. Many questions remain unanswered regarding the relationship between microorganisms and disease. As indicated by the narrator, only further research can reveal the answers to such questions.

### Appraisal

*Microorganisms That Cause Disease* is an excellent introduction to the five types of pathogenic microorganisms. The concept of disease and the destruction of cells as a natural consequence of the exist-

ce of pathogenic microorganisms well presented. The demonstrations and use of photocine-micrography to show destruction of cells well done and should help students gain a more vivid understanding of the relationship between microorganisms and disease.

The film is highly recommended for use in biology and health classes on the junior and senior high school levels. The biology teacher will find the film excellent in introducing the study of microorganisms. A health teacher will find it of equal assistance in getting across the fact that microorganisms are most prevalent under crowded, unwholesome conditions and that effective control, and thus improved health conditions, can come about only through persons becoming better educated about the causes of disease.

Some teachers will note the error involved in the statement, "Rickettsiae are transmitted by certain biting insects such as this tick." (The tick belongs to the order Arachnida not Insecta.) However, this error was not considered by the previewing committee to be of great significance in this otherwise excellent film.

—Donald Nicholas

## The St. Lawrence Seaway

*Encyclopaedia Britannica Films, Inc., 1150 Wilmette Avenue, Wilmette, Illinois* 17 minutes, 16mm, sound, color and black and white, \$95. \$180 and \$90. Teacher's guide available.

## The Story of the St. Lawrence Seaway

*McGraw-Hill Text-Films, 330 West 42nd Street, New York 36, New York* Produced by the National Film Board of Canada. 14 minutes, 16mm, sound, color and black and white, 1959. \$150 and \$75.

### Description

Because of the timeliness of the subject and its significance to economic development and international relations, the production of films about the St. Lawrence Seaway was to be expected. It is not surprising that some of the earliest releases of classroom films on the subject are by EBF and McGraw-Hill-NFB. The first named film was produced in the United States and the second in Canada.

Both films are approximately the same length, are available in color and black and white, contain scenes made at the same time and place, and tell basically the same story. A general outline of that story which applies to both films is: (a) the geographical setting and economic need for the Seaway, (b) the administrative agreements, specifications, and engineering methods of its construction, and (c) the immediate and anticipated results of the Seaway in terms of international economic development and cooperation.

In spite of similarities in film specifications and basic ideas, the two films offer some interesting contrasts in cinematic treatment. The U. S. film introduces its story with the historic event of Queen Elizabeth II of Great Britain and Canada arriving in Chicago aboard the royal yacht and accompanied by naval vessels, the point being that the completion of the St. Lawrence Seaway made this feat possible for the first time. The main body of the film is then presented in the form of a flashback. The Canadian film starts with the premise that there is an interrelationship between cities, industry and water transportation, particularly because of the relatively lower cost of water transportation. Because large ships provide cheaper transportation than small ones, and because the expense of loading cargo from large lake steamers to small canal boats and transferring it again to ocean streamers could be avoided by building a larger canal along the St. Lawrence "bottle neck," the Seaway was constructed.

In order to state the problem offered by the natural situation of falls and rapids originally existing between several of the Great Lakes and along the St. Lawrence, both films rely heavily upon materials prepared by graphic artists. The U. S. film uses a map (horizontal) of the Great Lakes-St. Lawrence system on which figures indicate the height above sea level of the various water bodies. The Canadian film, on the other hand, uses a profile (vertical) to visualize the problem of uneven elevations. In showing the procedure for constructing the Seaway (through the use of cofferdams) the U. S. film first uses a model while the Canadian film shows only the real thing. The color print of the U. S. film shows the model and its functions with more clarity than does the black and white print. Similar shots of dynamiting are used in both films when

the last link of the Seaway is flooded. The Canadian film follows with the formal opening ceremony that features Queen Elizabeth and President Eisenhower, while the U. S. film indicates the products of commerce, their magnitude and significance, before returning to Chicago for the Queen's address there.

### Appraisal

Each film makes worthy contributions to the recorded knowledge about the St. Lawrence Seaway. The EBF film provides a commentary that is richer in statistical detail, and it alludes to concepts that would assume a high school, college and adult level of use. Its probable use will be in courses in geography, business, and economics, including the overlapping area of economic geography.

The McGraw-Hill-National Film Board film, because of effecting a greater simplicity and directness in its development, is more appropriate for use on the junior high and intermediate grade levels. Professional geographers will question the Canadian film's selection of the Detroit-Windsor area as an example of an area to which iron ore is brought by lake steamer to be converted into steel for use in the automotive area. In the first place, very little of the ore traffic on the Great Lakes terminates at the Detroit-Windsor location. Secondly, very little of the steel for automobiles is manufactured in this area. Thirdly, Detroit, of all the major cities of the Great Lakes, has accomplished less in the improvement of port facilities that would allow it to benefit from the Seaway. On the other hand, elementary teachers will probably welcome the way in which the Canadian film presents through animation the function of locks.

—Ledford Carter

# AUDIO

by Max U. Bildersee

## Getting Underway

We had been talking but a few minutes when she said, rather abruptly, "Let me be blunt, Mr. Bildersee. Audio has been terribly neglected in our schools. How we get started without wasting time and money?"

I wasn't surprised to hear Miss Maxwell speak this way. I had known her for several years as a forward looking educator who, recognizing need or error, set about on a straight line to fill the need or correct the error.

"You know, Miss Maxwell," I said, "we have several problems here. First there is the matter of teacher readiness and understanding of the importance of the audio aspects of the total teaching program. And after we have explored that and determined a reasonable program and timetable, let's look at the twin problems of material availability and equipment

condition and convenience for use."

"Before we do enter these aspects of discussion," she said, "let's add an important fourth. The teachers on my staff can understand objectives and services they may expect from audio materials. And we can supply equipment and records. But how do we keep up with current developments? It has been my observation that many new recordings recently have been put on the market. And frequently these are produced by small, out of the way concerns. In short, what are the sources of information?"

We started with the matter of teacher readiness. I spent considerable time describing the various ways a school system could organize a record fair for the teachers. I suggested that it start with a presentation of teaching objectives served by sound.

Miss Maxwell interrupted to ask, "Who should do this?"

For the most effective use of language laboratory facilities in the classroom...

## THE NEW LINGUAPHONE SCHOOL PROGRAM

NDEA-QUALIFIED  
COUNCIL OF STATE SCHOOL OFFICERS-STANDARDS

... Synchronized Tape and Records in the only COMPLETE conversational foreign language study program available

The NEW LINGUAPHONE LANGUAGE PROGRAM has been especially developed for school use by the Linguaphone Institute. The World's Standard for over 50 years. Linguaphone Conversational Record Courses in 34 languages are used by more than 18,000 schools, colleges and universities.

Now LINGUAPHONE SCHOOL TAPES combine with records and manuals to provide a complete audio-visual program for perfect conversational training.

Only Linguaphone... offers identical course material on TAPES and RECORDS: tapes have optimum-length pauses between words or idiomatic phrases for student repetition and recording; records present an uninterrupted conversational flow.

- Only the language being studied is heard.
- 3,000 basic words are presented through interesting conversational situations.
- Only leading native language teachers speak on Linguaphone Tapes and Records.
- The voices of 8 to 12 men and women, authorities in each language guarantee authentic speech.
- Courses are completely up-to-date.

### SCHOOL TAPE PROGRAM IN EACH LANGUAGE INCLUDES:

- 32 reels of tape—3 3/4 ips—1/2 track recorded. 50 conversation lesson units, 2 phonetic lessons, 2 lessons on introductory phrases.
- Complete Teacher's Instruction Guide.
- Linguaphone Student Manuals.
  - a. Illustrated Situations—complete transcription with keyed pictures
  - b. Vocabulary—in the order presented, along with English equivalent
  - c. Explanatory—construction and usage
  - d. Reference Grammar
- Student Workbooks (Prepared by Dr. Theodore Huebener, Director of Foreign Languages, Board of Education, City of New York).
- Sturdy Storage and Carrying case (secured with lock)
- LINGUAPHONE COMPANION RECORD SET
- 16 Unbreakable discs—32 sides—Set of Manuals, Storage-Carrying case.

### LINGUAPHONE SCHOOL TAPES

are now available in the four languages in most popular use today: Spanish (Western Hemisphere), German, French, Russian. Italian and others (now in preparation) will be available in the near future.

For a demonstration of LINGUAPHONE SCHOOL TAPES and RECORDS in your school—or a fact-filled descriptive brochure, write to LINGUAPHONE, SD-1907, Radio City, New York, NEW YORK

"You can do it, Miss Maxwell, the superintendent can do it. The higher the rank of the individual proposing the ideas and the board program, the better opportunity there for success. As you know, this cannot be superimposed. It must be proposed by someone who will be heard, and then adopted by the staff."

"What general points do you believe should be emphasized in such a presentation?"

"Before we get to that," I interposed, "let me suggest that this be presented to a county-wide or system-wide teachers' conference so that the importance you attach to it will be accepted by the staff."

We went on at this point to discuss what should be stressed by the person introducing the idea of expanded use of audio materials. We talked of the importance of the introduction of a variety of personalities into the classroom. We explored the area of using recorded "experts" for instruction in particular areas on the secondary level. Miss Maxwell referred to listening to poetry as being akin to listening to music, and then suggested that the "poet reading his own work" would give an authentic interpretation a professional reader could attain.

I pointed out the new and ambitious program of producing records of American poets reading their own works which Yale has embarked upon and pointed, too, to Carl Sandburg recordings as well as those of Edna St. Vincent Millay and Robert Frost. Miss Maxwell mentioned the series of recordings produced some years ago by Columbia Records on authors reading their own writings. These, she thought, might well be included in either class collections or library collections for circulation to students.

When Miss Maxwell said, "Now, in the field of music..." we both smiled because we recognized that this area could well occupy all of our attention. But she quickly added, "Are there particular recordings we should emphasize in our preliminary demonstration? I mean, are there records of instructional importance which do not necessarily emphasize performance? Are there records to help the child understand the orchestra?"

I asked Miss Maxwell if many of her students, even secondary school students, took advantage of available concerts.

She said, "No, and I fear that is because they cannot grasp the inherent beauty of the several instruments."

I suggested that she audit *Music for Young Americans—Kindergarten* (Audio Education BM-K) as a starter. I suggested, too, that she preview and audit the Jam Handy record/filmstrip

the series *Opera and Ballet Stories* as well as their *Instruments of the Symphony Orchestra*. I pointed out that the albums *The Instruments of the Orchestra* and *The Magic of Music* (Cabot CAB 4021 and CAB 4022) would well be used in intermediate grades. I suggested that junior high school students might be introduced to the records in the album *The Complete Orchestra* (Music Education Record Corporation). Then we talked of particular performances devoted to instruction and settled for two Columbia recordings, *Young Person's Guide to the Orchestra* (ML 5183) and *Symphony No. 5 in C Minor* (CL 918) by Beethoven. We chose the latter because Leonard Bernstein's demonstration and orchestral illustration which occupies one side of the recording makes it instructionally valuable.

"And for the history of music," said Miss Maxwell, "what do you suggest?" *The History of Music in Sound*, I said, "is a comprehensive series of volumes most useful for reference and demonstration purposes. These will be particularly useful in the hands of a creative teacher. They are published, you know, by RCA Victor."

"But we must not lose sight of our immediate problem—the establishment objectives," I said.

"Oh my goodness, no" was the reminder. "But I am not forgetting that it is important that we point out to the teachers that there is no self-contained instructional medium. Each medium must remain wholly in the control of the teacher. She must be master of the situation, not the machine."

"Wholly agreed," I said. "Then we are discussing these materials and the audio medium in the same manner that we would be discussing any other aspect of audiovisuals, or books or maps or anything else."

"That's the point of view I want my teachers to understand."

"Then," I said, "audio adds fundamentally essential ear training. The children must learn to listen and to separate the wheat from the chaff of spoken statements. They must develop audio appreciation and understanding."

"Yes, and this can be done only with practice."

"True. And the areas on instruction in which sound is applicable is rapidly expanding. Did you know that there are recordings in art appreciation which your students can enjoy and profit from hearing?"

"Tell me more. I had assumed that such areas as mathematics, science and art were so utterly visual that there could be no records."

"So had I," I confessed. "But for the elementary school there is Cabot's *Let's Look at Great Paintings* (Cabot CAB 4024) and for the secondary school Spoken Arts has produced *Invitation to Art* (763) which can be most useful."

"And, Mr. Bilderssee, the same is true in science and mathematics?"

"Largely," I said, "for there are recordings in these areas, too. And they are available in simple arithmetic as well as in algebra and geometry in the mathematics field. And in science there are special recordings on the science of sound, for instance, and in other areas as well. Further, in science, the opportunity to present personalities exists."

"Before we go too far in listing records and objectives, for now I understand that there is much available, let's look at the other matters in our agenda." Miss Maxwell referred to her notes and said, "What do you recommend about equipment?"

I pointed out that this is a most difficult problem on which there is no real agreement. The test is whether suitable record and tape players are available at any time a teacher needs them, and whether such machines are near at hand or distant. "You know," said Miss Maxwell, "distance lends enchantment at times, but not when you have to carry a machine."

We suggested that we set a standard of sharing equipment in various sections of each building. Miss Maxwell agreed with my insistence that there is no substitute for good quality in such machines and that quantity was unimportant if quality was ignored. We both felt that, for record players, four speed machines of better than average quality must be supplied. I then suggested that Miss Maxwell investigate such machines as Audio

Master, Newcomb, RCA Victor, Columbia and Califone. I urged her to ignore the \$29.95 bargains as waste.

"Should we have a central library of records, and distribute them to the schools," she asked.

"I suggest that a dispersed library is better," I said. "Each school should have the recordings needed in that building, with the exception that recordings used very rarely can be shared. After all, you wouldn't share inexpensive books so why share inexpensive records?"

"We've made considerable progress, Mr. Bilderssee," said Miss Maxwell. "First, we should introduce the board idea to the teachers in a large group rather than as individuals."

"Just a minute," I interjected. "No reason can be given for not introducing this to teachers individually, except that you originally asked me about getting started without waste of time or money. I am urging that you invest time and money to get started."

"Right you are. A presentation to the group by an important individual like the superintendent or a representative from the state education department is a good beginning. We follow this up by letting the teachers see and hear a variety of records. Can they experiment with them under classroom conditions?"

"This will depend upon the sources you use and the amount of time available. In one day just a little can be accomplished. But if each school is urged to purchase a few records and experiment with them, knowledge and experience will dictate what next steps to take. And of course this leads to the point we mentioned at the beginning—that of keeping up-to-date."

"Yes. How can we do that?"

"One step is to organize a committee or several committees respon-

sible to the professional staff to keep them informed. These people must work closely with your instructional materials staff.

"You must supply them with necessary independent publications in which such materials are found."

"Can you suggest some?"

"Yes, I can. You will see advertisements for many of them. But immediately coming to mind are *Educational Screen and Audiovisual Guide* and other professional journals of similar nature, and periodicals such as major newspapers and magazines. In the latter group usually metropolitan Sunday papers and such magazines as *The Atlantic* and *Saturday Review* are useful. Then there are specialist journals in the subject matter areas like the magazines published for language instructors, elementary teachers, social studies teachers and so forth."

"Of course, and we have these here all the time!"

"Yes, I suspect that they will be found in your professional library. But route them through your instructional materials consultant and he can then give teachers and committees valuable help in discovering and selecting appropriate material."

My head was spinning as I left Miss Maxwell. We had talked of many things, we had covered much ground, but there was still much more to be discussed.

**Poetry Readings**

The *Yale Series of Recorded Poets* will be a remarkably inclusive collection of readings by contemporary poets from their own works. These

have already been recorded on magnetic tape by Lee Anderson, a poet in his own right, and they will be released at a rate of four a month for a considerable period. Eventually it is anticipated that the work of more than 100 poets will thus be covered.

Are you looking for some enrichment material for your language laboratory? There is a record of German poets you should know about. This is essentially a survey course spanning the years from the twelfth century to the twentieth. Lotte Lenya reads thirty poems representative of the work of von der Vogelweide, Klopstock, Goethe, Schiller, Eichendorff, Lenheine, Scheffel and many others, including the moderns Brecht, Hofner, Werfel, Hesse, Rilke and others. The album is *Invitation To German Poetry* (Dover, 180 Varick Street, New York 14) and includes a complete script.

**Magnetic Sound on 8mm**

We are on the verge of something new in audio in schools . . . involving the broader use of the magnetic sound track on film—on 8mm film as it is progressively introduced to the market.

There are several new machines already on the market—and more to come—offering the school the opportunity to make their own. They serve small groups with sound adequate for speech frequencies. Their school applications will depend on the ability and willingness of teachers and personnel to take time to prepare a record soundtracks appropriate to homemade or commercially made films. There will probably be 8mm color-sound films available, but their first use in education may be in home and school-made motion picture strips for sound and recorded tracks particularly adapted to the immediate needs of particular groups of children.

There are the usual problems of magnetic recording: erasure, poor technical quality indicative of amateur recording, sound tracks partially destroyed and all the other ills of the medium including our inability to inspect visually on rewind. These may be overcome by care in use and technical progress. The 8mm sound projector can become a factor in audio-visual education. Johnny can read, and he can write and speak, too. Through the 8mm sound film his writing, reading and speaking talents can be paralleled before his peers as the soundtrack of a film. This is a challenge to bring forth his best efforts—and ours.

# FILMSTRIPS

by Irene F. Cypher

One thing we have always liked about filmstrips is their potential for individual viewing and use. We hear much today about materials designed for mass education, mass viewing, group discussion, mass impact, and one might be tempted to think that education was always a large group activity. It is well to stop sometimes and remember that much of the educational process depends upon what the individual student is able to do for himself; that small groups of students gain from the opportunity to get together as a small group to discuss, talk and work; that even though many learning sessions do take place in large or mass group meetings, they are followed by individual or small group study. It is for this reason that we like to see individual viewing devices in use in classrooms; that we like to see two or three students huddled about a table viewer; that we

like to call attention to the fact that the filmstrip is a good educational medium because it lends itself to such activities.

In thinking about it the other day we did a bit of dreaming about what would happen if there were several filmstrip projectors and several individual viewers in each classroom. Would students be permitted to take up a filmstrip and browse through it as they do a book? (Wouldn't it be wonderful to hear a chuckle as the student came to a picture which pleased him and which satisfied some personal idea of his very own, without having to share it immediately with thirty-odd other viewers!)

If students had access to such use of filmstrips, might it not make them willing to turn to these picture aids for reference and study and would it not encourage them to look at the visual evidence in subject areas and

really see it? Yes, group study is good, but we wish more time were given to individual and small group study too. We need to provide opportunity to develop individual thinkers as well as group members of society.

*Audio-Visual Spanish Language Series* (30 filmstrips, color, with 18 records arranged in 6 sets of 5 filmstrips and 3 records per set; produced by Pathscope Educational Films, Inc., 71 Weyman Ave., New Rochelle, N. Y.; \$81.25 per set of 5 lessons, group rates for special unit plans). Our ideas as to the way to study languages have undergone quite a change recently (and for the better we think). Material such as this series makes it possible to "move into" a language situation, and use the language as we learn about it. The pictures of the series were photographed in Mexico and the commentary is in conversational Spanish which can be used and adapted to increasing facility in speaking skill. Planned in accordance with the Pathscope-Berlitz pattern, this gives the student an opportunity to hear Spanish spoken at a conversational rate; it gives vocabulary material which is suited to normal, everyday situations and the material can

be adapted to many lesson needs.

There are also teacher's guides and vocabulary scripts, with English translations. The complete unit is well planned; filmstrips and records can be used together or separately and teacher and class can turn to them for real assistance as aids to gaining a feeling of ease with the Spanish language. The material is not for use with

any specific textbook or grade but can be used whenever students are beginning to work with this language.

*Community Helpers: Set No. 2* (6 strips, color; produced by McGraw-Hill Book Co., Inc., 330 West 42nd St., New York 36, N. Y.; \$32.50 per set, \$6 single strip). Young citizens in the kindergarten and primary grades are interested in finding out all about the milkman, dentist, librarian, sanitation department crew, service station attendants and the street maintenance crew. This is natural, for these people all have an important place in the world about which they are learning. The various individuals are shown going about daily tasks, at work in their job locally, and helping people of the community. The presentation is closely related to an curriculum units and work at these grade levels. Each one is shown talking to children and the stories are made to appeal to young interests and ideas.

*Dating Topics For Teens* (2 sets of 4 filmstrips and 2 records, color; produced by Family Films, distributed by Society for Visual Education, 13 Diversey Parkway, Chicago 14, Ill. \$5.50 per set, \$6.50 single strip, \$3.50 single record). The first set of this series is intended for junior-senior high school students or young teenagers; the second set is planned for older teens. This means that set number one deals with the ever-puzzling problems of how to get a date, what to do on a date and how to know whether or not it is love. The second set takes up the problems of going steady, how to behave on a date and how to look ahead to marriage. These are not easy problems with which to cope, and guidance counselors, classroom teachers and group leaders need material which will hold student interest and lead them to think about these matters. The art work of the strips as well as the narration of the records has been planned for young people of the immediate present. This means that discussions and subject consideration are fitted to today's situations. They are intended to be used in discussion sessions, and they provide material that should help teenagers to look at their problems from a very commonsense point of view.

*Learning About People* (12 shortstrips; color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill. \$19.90, including a hand-viewer). Here again we have emphasis on individual study, for shortstrips are just what the name implies, a short filmstrip of 14 frames,

intended basically to provide material for individual pupil viewing. This particular series deals with the topics that make people what they are: eyes, ears, hands, taste and smell; also why we need a home to live in, clothing to wear and food to eat; makes individuals afraid and enables us to put our thoughts into words. The material is simple, direct and provocative in that it will direct the viewer's thoughts to finding out more about each subject presented in a strip. There is no waste of descriptive material, questions are clearly stated, and the basic facts are given for the student to ponder over. The strips can be correlated to any books or texts used and are easy to handle.

*Sir John MacDonald, Part I and Part II* (2 strips, color; produced by National Film Board of Canada and distributed by Stanley Bowmar, Valhalla, New York; \$5 per strip). A real understanding of Canadian history and development demands a understanding of the role Sir John MacDonald played in Canadian affairs. This is a picture biography painted against a background of social history. We see how MacDonald worked to achieve a strong central government and the part he played in Confederation activities. This means that we see the steps by which Canada progressed from a frontier colony to a place as a world power of great importance. The story of a great man and it is an exciting one, with value for social studies classes.

*Simple Posture In School* (single strip; color; produced by Roger Peet, Los Angeles, Calif., Box 397, Sierra Madre, Calif., \$1.00). Good health as a comfort depends upon correct posture when seated. Simple posture when seated. When we meet pictures show us various posture when we talk about going to a chair seated, how to act in a series (and how not to sit) give us "multiple choice" examples of right and wrong to comment on our feet and what to do when seated.

There are many reasons why this strip that directness to this film are clearer refreshing; picture is uncluttered and attention considered on the point of the filmstrip there is no nonsense, "simplicity" and no "preparation" pupils will gain facts. Probably matter-of-fact favorably to and have a . of the presentation sitting habit time discussing at any grade strips can be used.

# AV in the Church Field

by William S. Hockman

## Summer Time

There are some things that churches and producers and distributors ought to do in summer time. Let's take them one at a time, and set down in summary some concerns and activities for each group:

### The Local Church

1. Now is the time for the local church to make an inventory of its AV materials. What did you use most in the past year? What got little use? Why was this so? Did you neglect good materials on hand? Did what you used a great deal fit your program better? Was it a matter of your educational leadership not knowing about the materials you had available for it? This means that you ought to study your use-records to see what they say.

2. Now is the time for you to be thinking over what you need to secure this summer in terms of your program emphases next fall and winter. What about your missionary program, your youth fellowship, your church school, your leadership training program? Have you new materials to meet the needs in these fields? Why not go through this *Blue Book* issue of *Educational Screen and Audiovisual Guide* and check materials that you would like to know more about? Ministers, directors of education, church school superintendents and other leaders may have more time now than at any other time of the year to study catalogs, lists, ads, and all sorts of informational materials with a view to selecting materials for their AV library.

3. Now is the time for you to get better acquainted with your immediate source—the nearby AV dealer or rental library. Suppose he is 50 miles away! Just plan a day for going and looking over his materials. If you can, phone him. If you can't do that, just walk in. He will be glad to see you. Tell him of your needs. This helps him. Knowing your needs, he may be able to help you. This personalized relationship can mean better service all year long.

4. Now is the time to use materials that you don't get around to in the

busy fall and winter. Where? In camps; conferences; in vacation church schools; in retreats for youth and adults; in leadership conferences and schools. It is easy to forget audiovisual in summer. Don't do it.

5. What about your equipment? Are lamps getting gray or showing black tops or bulges? Better plan to replace them now. What about cleaning? Is that fan under your filmstrip projector full of lint so the blades are inefficient? Better check; they clog faster than you think. What about new equipment? Was usage curtailed last year because you did not have that second filmstrip projector? Do you need a table-type filmstrip previewer? It is a great convenience and a time saver. What about screens? Got enough? Got the right ones? Now is the time to act on equipment. Many AV committees will need to be planning their budgets for the coming year and when they do, don't overlook equipment.

6. And on this matter of budget! By and large, churches get and pay for what they (are convinced) they need. Perhaps you need to do some convincing this summer, beginning with yourself. Half-sold, you won't sell someone else very easily. Get all the way sold yourself and go after the money. Look way ahead; get the facts; present them where they will influence decision and action. If you've been financing materials and equipment *outside* the regular budget, stop that and get it *into* the budget.

### Local Dealer

1. If you have not done so, read my advice to the local church and see what that means to you. It can mean much if you will see your side of the coin.

2. Now, in summer, is the time for you to get better acquainted with your customers. Why not write to a group of churches and ask them to send in their key AV person on a certain day? Why not have a box lunch for them? Why not get out the new stuff and show it? Better look at it yourself first. You will do a better job of talking about it if you do.

3. And that brings me to point three: Know your stuff. Man, you can't really serve your customers until you know what's in those cans! Have your booking girl on hand for this visit of AV people from the local church. Personalized business means *more* business. Don't forget to be on hand yourself. Miss golf that day!

4. Now is the time for you to take inventory, not in the usual way but in terms of what's 'dead', alive, and jumping. Better think up ways of getting your materials out to your customers. Tell them what you have and how they can get it. Better find out why certain materials did not 'move.' Did you put any pressure back of it; follow the producer's sales advice; think up better ideas than his or just let it slide off to the side? Lastly, are you buying what your customers want?

5. Now is the time for you to lift your sights on the whole church field. Are you reading? Do you know what's going on? Do you get the denominational curriculum brochures to see what the up-coming lessons will be about? Do you ask the National Council of Churches what the mission study themes will be for the coming fall and winter?

6. Now is the time for you to offer service. If you will get in touch with the people who run camps and conferences of all kinds for children and youth, you will find that they will appreciate any help which you can give. Remember, those who see films and filmstrips in conferences, camps, vacation church schools, will want to see them when they get back home. Spend some time with the director of the community service agencies. Find out who the leaders are and offer them whatever help and service you can give in what they are trying to do. It will pay—both you and them!

7. Your total sales (and income) will be related to your total information AV-wise. Your information will come from at least three sources. The producer will take the initiative, but you must respond, and read what he has to say. It may be very important to you. You ought to get information from the churches. This you will need to go after. Better talk ten minutes with leaders in five churches than spend a lot of money asking questions that won't be replied to on paper. You will need the information which this *Blue Book* issue can give. Study it carefully. You might want to check in it materials which you have and then send it to actual or potential customers.

8. In the church field you can't

get along without the *Audio Visual Resource Guide* (AVRG) of the National Council of Churches. You need it as reference. It is full of information which you can use. It will help you serve the churches better for it evaluates church-field materials better and more extensively than any other document in existence.

9. Lastly, better check your lines of communication. A highly motivated church worker wrote several days ago asking how he could get information on a filmstrip series. In his city, and close by, were three AV dealers who serve churches. How did they miss him; how did he not know of them? Dealers, that's your problem. Perhaps your material was reaching the church but not being passed on to key workers. That's both your fault and the church's. Now, in summer, is the time for you to rebuild your file of local church users of AV materials. Many churches do not have AV committees as yet or coordinators, but will put your information in the proper hands. Better get the names of individual users in your files and not just churches. There is a big and continuous turnover of workers in the average church. Better find out if your mailing lists are reasonably accurate.

### *The Producer*

By 'producer' I refer to those who produce AV materials both for themselves and for others.

There are some things which you, the producer, can do in summer, also. First, better read above my suggestions to the churches and the local dealers. There are implications there for you.

1. In summer you can get better acquainted with the whole field by going where church and church-AV people meet. You need to know what they are thinking. You can gather this from listening to what they say. Your salesmen would do well to stop in on AV workshops, institutes, courses and conferences. You need to make some effort to keep abreast of what is going on.

2. Are you sure you know how to help your dealers sell your products to the churches? I read some of your sales pitches. I know the local church. I know what motivates local leaders to buy. I must confess that some of your slicked-up advice is pretty thin soup! Some of you may need to know the churches a little better. They are not schools; not industry; not the general public—they are churches, and they have peculiarities (for ill or good). You would do well to re-evaluate much of your advice to local

dealers about how to 'sell' the local churches.

3. When you produce for yourselves and when you produce for a client who looks to you for advice, you should know more about this whole problem of what medium for a given body of content. Are you sure that we are not running the 'sound filmstrip' into the ground? Do all filmstrips need recorded commentaries? I see filmstrips that would have made good recordings. Someone spent a lot of money for pictures which 'said' nothing or very little. Again, I see filmstrips that don't need the commentary frozen on a disc but just printed for the user. Just how did the church field get topheavy on sound filmstrips—to the severe neglect of the cheaper captioned ones or those with printed notes or commentary? While the cloud on the horizon of the churchfield is no larger than a man's hand, there may be a lot of water-of-change in it for you producers to consider.

4. In 1957 we called attention to the general economic situation in the church field to the disgust of some of our readers and the alarm of others. A few leaned back and took a sober look at things but by and large there has been little or no improvement in the basic economic patterns prevailing. Churches ask me all the time where they can rent filmstrips, for instance. I tell them to buy them. They say, "How can we at \$10.00 per?" Now that's not my question. Producer, and dealer, you answer that one. I know that many churches can buy; they just pretend to be poor. But we shall either convince them or not do business with them. It's your problem; you find the answer.

5. When your clients come they generally have their minds made up as to what medium they want for their material. When they do ask for advice, can and do you help them think the problem through in terms of the economic and utilization factors prevailing in the church field? Suppose they do have the right AV medium in mind, what about the specific format of that medium? Can and do you advise them on this in terms of the economic and utilization realities prevailing in the church field? If you don't, who will? If you don't, you and every one right down the line will be affected, perhaps adversely. This effect will be in usage volume. In this you have a stake. (Incidentally, let us all hope that the "Consultation" at Boulder next month will throw much light on our problems in this area.)

6. By and large you producers are to be congratulated upon the technical excellence of your productions. You have reached a general plateau of quality which reflects most favorably upon your abilities. You have set higher and higher criteria and you have reached them. Across the board you are notches ahead of what I see over in the 'school field.' Would that total usage had increased in the same ratio over the last two decades! While the factors in this equation are more dominantly human and less technological, we are confident that here, too, solid advances can be made in the decades ahead. My perspective on the church AV field dates from 1924 and that much too long to permit other than an optimistic outlook.

### **Filmstrip Notes**

When you are trying to tell people about an orphanage in Italy, nothing beats color photographs, especially if they have been carefully and artistically taken. If you add a sensitive commentary, you get a visual aid that really speaks. This is what we have in the 87-frame 13-minute, LP recorded filmstrip *Children of the Living City* which was produced by the Methodist Board of Missions (47 Riverside Dr. N. Y. 27). It tells of the Casa Materna Orphanage in southern Italy, which has been home to more than 8,000 homeless children since it was founded by Papa San fifty years ago. Going along with the film is another, *Letter from Franco*, 48 frames and 7 minutes, in which a eight-year old boy of Casa Materna tells his friends across the seas about his life and thanks them for his birthday gift. Both films plus record for \$12.00. Excellent production; highly recommended.

For \$28.00 you can secure (from SVE, Chicago 14) four good and useful filmstrips on Africa which have excellent pictorial and sound qualities. The photographs were taken (on location, of course) by Dickie Sada in Angola, Portuguese West Africa, and the background sound of songs was recorded there also. At certain times all of them just right, the music comes to the foreground and adds beauty and realism to these fine filmstrips. The narration (with the background music) for the four is recorded on the two sides of an LP disc. The titles are: *Angola Awakens*, 97 frames and for junior hi and up; *Gifts of Healing*, 91 frames and for junior hi and up; *A School Bell Rings In Angola*, 73 frames and for primary and junior; and *The Firefighters of Angola*, 7

A smile of achievement for Francisco, whose summer camp activities are discussed in the accompanying review.

times and for junior hi and up. Highly recommended. Get fuller descriptive literature from SVE.

David Einhorn was a rabbi at the age of 17. Being too young to serve a congregation, he continued his education. His advanced studies swung him over to the liberal side of Jewish thought. This, in the 19th century, limited his opportunities for service in his native Germany. He came to Baltimore. Here he led his congregation until his stand against slavery in 1861 caused a rift. He went to Philadelphia, then to New York. All the time his deep learning brought him into the upper levels of Jewish leadership until he was among the most outstanding. Great Jewish leader, educator and reformer, his story should be known in both synagogue and church. Great American, his deep devotion to God and country should be known in the schools. A fine production, under Dr. Samuel Grand's direction, with William Steinl doing the art and Rabbi Bernard N. John the research and writing a splendid script. Oh yes, the title: *Dr. Einhorn: Father of the Union Prayerbook*. From AV Dept., UAHC, 838 Fifth Ave., New York 21, N. Y. Price \$7.50.

### Film Notes

In all the regions of the world, wherever men know sickness and women lie down in labor and children cry out in pain, there are those who have gone forth to help them. In the 33-minute color film *Medical Mission*, we see these followers of the Great Physician at work in Africa (mobile clinic), in Sarawak (Dr. Brewster), in Nepal (its only hospital) and in India (eye clinic and leper rehabilitation). While this film presents Meth-

odist missions it will be useful to any group which wants a fine close-up view of what medical missions really mean out on the health frontiers of our shrinking world. Recommended for junior hi and up. Available for a rental of \$10 from all Methodist film sources and the Methodist Board of Missions, 475 Riverside Dr., New York 27.

Produced especially for juniors and junior hi young people, the 15-minute color film *Francisco* tells how a Puerto Rican boy got to summer camp and

what he did after he got there. The camp's slogan was "Learn something new; do something new." The hero of our little film did just that. He learned how certain people of the Bible made a living, and he learned how to make a bird out of plastic strings. What a sense of achievement this gave Francisco! Delightful and informative film. Further information and availability same as that above. Excellent presentation of camp program adds to the benefits this film can offer to a young audience.

**PHILCO**  
**CLOSED-CIRCUIT TV**  
brings new flexibility  
to teaching

Philco, pioneer in fully-transistorized closed-circuit television, offers completely integrated instructional TV systems for schools and hospitals. Philco systems provide the ultimate in flexibility, incorporating any number of cameras, monitors, receivers and amplifiers, interconnected through a central console or a "patch panel" . . . with provisions for two-way conversations. Philco equipment is reliable, easy to operate and low in cost. Philco will help you design a system to meet your requirements. Write for information and your Philco Closed-Circuit TV Planning Guide.

**Government & Industrial Group**  
4700 Wissahickon Ave., Phila. 44, Pa.  
In Canada: Philco Corp. of Canada, Ltd., Don Mills, Ont.

**PHILCO®**  
*Famous for Quality the World Over*

**The World's First Integrated Hospital Closed-Circuit TV System** was recently installed by Philco at St. Christopher's Hospital for Children, Philadelphia. It links the main operating room, lecture halls, auditorium, pediatric treatment rooms, psychologic observation rooms and the radiology department. Folder describing this system will be sent upon request.

# Something NEW

## In Instructional Materials

14 full color transparencies mounted in a "childproof" Viewmaster type

# FILM DISC

A new teaching tool for group or individual viewing, no threading, practically indestructible, files flat with its built-in utilization materials.

### Yet—not really so new!

In more than half a million homes "Viewmaster" is a household word for pleasure and learning, for child or adult. The McMurry-Sowyer FILM DISC differs in that it provides a sequence of 14 scenes, all different, instead of the traditional seven pairs of 3-D views.

As an experimental project of the Television, Radio and Film Commission of The So. Cal-Ariz. Methodist Church this basic material has been used over and over in a large number of church schools. It is now available for all.

Eleven subjects are now ready. Their cost averages \$2.65 each including script, study print, usually two FILMDISCS (28 pictures), fitted into a sturdy, imprinted, correspondence-size file folder.

**KIT,** Complete with projector, table top screen, storage file and 6 subjects. **\$33.30**  
(With de-luxe projector (100 watt) \$42.80)

These subjects are non-denominational, they may be shown in any church school and in many secular classrooms as well.

Specifically denominational subjects can be made at very reasonable cost. Please inquire.

Order your FILM DISC projector and kit today—money back if not satisfied.

Special offer—send \$1 for complete sample subject

**HAPEL FILMS**

Owners of an initial kit may preview all the above and any new releases as they appear, without obligation.

**Careers in Science** 4fs SCRIBNERS Titles: **Looking Ahead to Mathematics . . . to Physics; . . . to Chemistry; . . . to Biology**. JH

**CPA** mp ASSOCIATION 29min b&w loan. One day in the life of a Certified Public Accountant, and the social impact of his services. SH C

**Designing a Better Tomorrow** mp A 13½min col \$65 r \$5. Architecture a career. Elements and meaning of architecture, nature of architectural schooling. SH C A

**Make All Things New** mp METHODIST 27min b&w r\$6. The need for Methodist deaconess recruits and the variety of jobs open. SH C A

**A Question of Life** mp METHODIST 13min b&w r\$4. A college student wants to become a minister; parents oppose this choice. SH C

**Reply to Realty** mp METHODIST 13min col r\$8. A young mission couple return to their school to challenge the students with the opportunities of the mission field for service. SH C A

**Summer of Decision** mp ASSOCIATION 28½min b&w loan. College student decides on social work as his profession. Made for Council on Social Work Education. C SH

**Technology and You** mp NEUBACH 13min col \$130. Role of technology in transportation, architecture, automation, motive power and research. Student motivation to acquire salary skills in technological age. Review ESAVG July 1959. JH SH

**Three for Tomorrow** mp UWF 28min loan. College graduate sizes up many career opportunities in the industry. Louisiana under-water world are featured. SH

**View from the Mountain** mp MODERN 22min col loan. Careers in dietetics girls' preparation in college and internship. SH

## HEALTH, SAFETY

**About the Human Body** mp C-W 15min col \$165 b&w \$90. A boy's visit to a doctor's office becomes vehicle for interesting discussion and demonstrations about the body and its parts and how they work. Int

**Alcohol, Let's Think It Over** sfs METHODIST 62fr LP b&w \$7.50. Airl pilot discusses problem with his children as pictures show harmful reactions as well as helpful uses of alcohol in medicines. JH SH

**Autopsy of an Auto Accident** sfs WEINGHOUSE 10min b&w LP 33.3 rj. How poor lighting increases traffic hazards; seven chief causes of motor accidents. On same strip and record **There's Danger in Darkness** 6 min public safety aspects of street and community lighting. JH-A

ways keep to the right—from "Outboard Outings," Actna Casualty and Safety Company's award winning film.

**Baby's Health and Care (Series) MID-AMERICA** 12mp ea 11min b&w \$55. Titles: *Baby's Emotional Needs; Growth and Development; Holding a Young Baby; Crying Baby; Visits to the Doctor; Baby Sitters; How the Baby Learns to Obey; Mealtime Psychology; Learning to Walk; Baby Feeding Herself; Baby Fears.* Laufman Productions. SH C A

**Balance Your Diet for Health and Appearance** mp CORONET 11min col \$110 b&w \$60. Three children analyze their own eating habits — missing breakfast, fondness for greasy foods and for carbohydrates. Seven basic food groups. JH SH

**Bicycleist** mp BRANDON 15min b&w \$165 r \$12.50. A bicycle tells its own story of safe and unsafe riding habits in this Danish-made film that took the Blue Ribbon at EFLA Film Festival 1959. JH-A

**Car Behavior** sfs CATHEDRAL b&w 8rpm 12min \$7.50. Cartoon treatment of carelessness and its harmful results. E1-SH

**Chalk Meets Tommy Tooth** fs SVE col captioned Service Charge \$1. Diet, cleansing teeth, dental care. Sponsored by American Apple Institute. Pri

**Canine Cancer Challenge to Youth** sfs CANCER 65fr 7" 33.3rpm 2 sides script col loan from local Cancer Societies or ACS division office. Normal and abnormal cells; nature, causes and treatment; research; individual protective measures. JH SH.

**Fire Challenge** mp NBFU 10min b&w apply Common causes of fires as shown in the long experience of the fire underwriters. JH SH A

**Dogs, Cats and Your Community** sfs HSUS 57fr col LP \$5 r\$1. Uncontrolled breeding of owned animals as the cause of a 40 million surplus of unwanted dogs and cats. A

**Dollars for Health** fs INSTLIFE col \$3 loan. Effects of ill health on the families of three high school students. Others in this Dollars Series: **Directing Your Dollars** (money management); **Dollars for Security** (three teen-agers learn how life insurance affects their families). SH A

**Drive Defensively!** mp EBF 11min col \$120; b&w \$60. Driver education film with emphasis on through-the-windshield photography, shows how even the "good" driver must learn to drive defensively. SH A

**Driver Education (TV series)** 29mp INDIANA ea 30min b&w \$125. Titles: *Overview; Physical Characteristics of the Driver; Personality of the Driver; Attitudes, Emotions, Habits; Alcohol and Drugs; The Driver's License; Mechanics of the Car; Safety Features; Nature of the Roadway; Traffic Control; Natural Law; Man-Made Laws; Laws, Enforcement, and Courts; Preparing to Start & Stopping-Steering-Stopping-Backing; Down Shifting, Emergency Stops, Turns; Parking; Standard Shift Driving & Practice Driving in Traffic; Defensive Action; Defensive Driving; City Driving; Highway Driving; Pedestrians and Cyclists; Other Users of the Highway; Adverse Conditions; Night Driving and Emergency Situations; Purchase and Use of the Car; Maintenance; Liability and Insurance; Accidents.* SH A

**50,000 Lives** mp ASSOCIATION 13½-min col loan. Mouth-to-mouth breathing. Red Cross officially approved resuscitation method. Universal knowledge of the technique could save 50,000 lives needlessly lost by asphyxiation. JH-A

**Fire and Fire Prevention** 9fs EYEGATE col set \$25. Made in cooperation with the NY and other fire departments. E1

**First Aid on the Spot** mp EBF 10min b&w \$60. Revised (third) edition. Six common types of injuries and the

first aid techniques recommended by American Red Cross. Includes mouth-to-mouth resuscitation, shock, wounds, bleeding, fractures, burns. SH A

**Health and Safety for You** 5mp MH b&w. Correlated with Diehl and Laton text. Titles: *The Heart—How It Works (11min) \$65; Community Health and You (10min) \$60; Parents are People Too (15min) \$90; Sneezes and Sniffles (10min) \$60; Your Body During Adolescence (10min) \$65.* SH

**Health for Effective Living** 5mp MH b&w. Titles: *Body Care and Grooming (17min \$100); Body Fights Bacteria (17min \$100); Common Heart Disorders (17min \$105); Emotional Health (20min \$120); Endocrine Glands (15min \$95); Human Reproduction (21min \$135); Nose, Throat and Ears (11min \$65).* SH C A

**Hearts, Lungs and Circulation** mp CORONET 11min col \$110 b&w \$60. How the heart, lungs, veins, arteries and capillaries work together, and principles for keeping them in good health. Int JH

**Health in Our Community** mp EBF 13 min col \$150; b&w \$75. The work of the Health Department; teamwork with private medical forces; a fight to prevent a typhoid epidemic. Int JH

**How To Do Rescue Breathing** mp SEMINAR 5min b&w \$49.50. Currently recommended resuscitation technique (mouth-to-mouth or mouth-to-nose insufflation) demonstrated by Ray T. Smith, M. D. SH-A

**Impact** mp UCLA 12min b&w \$65 r \$2.50. Stop-action high speed photography documents what happens when automobiles collide. Lifelike dummies serve as occupants. SH C A

**Improving America's Health** mp CORONET 11min col \$110 b&w \$60. How expanded health and medical services have increased well being and life expectancy. Importance of education and individual responsibility. JH SH

**Introduction to Swimming Pool Sanitation** 23½min UWF b&w \$179.17.

**In Case of Fire** mp EBF 20min col \$240 b&w \$120. How fire drills at school prevent loss of life; how a crowded theatre is emptied without panic; how a girl awakens her family and saves her pet when there is a fire in her home. JH-A

**It's Up To You** mp HARVEST 11min col apply. One man's grim fight to save his eyesight after an accident due to carelessness. Precautions against eye accident, safety devices and techniques. SH A

**It's Wonderful Being a Girl** mp PPC 20min col loan. Menstruation presented as normal life experience of adolescent girl. Successor film to "Molly Grows Up." JH SH A

# THE QUALITY OF LEADERSHIP

# 100 OUTSTANDING NEW

# CORONET FILMS

The Coronet film subjects described on these pages represent the contributions of the leading producer of educational films to better education—during the period from October 1, 1959 through September, 1960. Of major interest are ten films in the *Vocabulary Enrichment Program*, re-narrated for foreign language beginners, and 27 in the *Chemistry Laboratory Series*.

These films were produced under the active guidance of leading educational specialists . . . and all reflect the high standards of Coronet for every film it produces or distributes. Each film has been produced in full color and is also available in black-and-white, except in the few instances indicated.

You will find full descriptions of these 16mm motion pictures in the latest catalogue of Coronet Films. A free copy is available on request.

If you are interested in making selections for purchase, use these pages as a check-list to request preview prints. Simply indicate the films which interest you and send the list to Coronet Films. Preview prints will be shipped promptly at no obligation or charge, except for return postage.

## ARITHMETIC

- Measuring Areas: Squares, Rectangles, (11 min.)** Introduces square units and shows practical use of area measurement. Gr. 4-9.

## ART

- Vincent Van Gogh (21 min.)** Many original works shown against scenes of locales associated with artist. Distributed. Color only. Gr. 7-College.

## GUIDANCE

- Beginning Responsibility: Lunchroom Manners (11 min.)** How to eat properly to become a better table companion. Gr. 1-3.

## HEALTH AND SAFETY

- Balance your Diet for Health and Appearance (11 min.)** Importance of balanced diet to weight, skin condition, personality. Gr. 7-12.
- Heart, Lungs, and Circulation (11 min.)** Key functions of circulation and how to maintain healthy heart and lungs. Gr. 4-9.

## LANGUAGE ARTS

- Improve your Punctuation (11 min.)** Chief uses of punctuation as a means of clarifying written communication. Gr. 7-12.
- The Lion and the Mouse (11 min.)** Amusing cartoon interpretation of Aesop's fable. Distributed. Gr. 1-3.
- Sentences: Simple, Compound, Complex (11 min.)** How to build sentences through independent and dependent clauses. Gr. 7-12.
- Stagecraft: Scenery Frame Construction (11 min.)** A step-by-step demonstration of scenery frame construction. Distributed. Gr. 7-College.
- Stagecraft: General Scenery Construction (16 min.)** How to build door and window flats, steps, and parallels. Distributed. Gr. 7-College.
- Stagecraft: Scenery Painting (8 min.)** Techniques of scenery painting to achieve interesting effects. Distributed. Gr. 7-College.

- Stagecraft: Stage Lighting (11 min.)** A light plot leads to final lighting with explanation of common lighting equipment. Distributed. Gr. 7-College.

- Verbs: Principal Parts (11 min.)** three principal parts and how all verbs are based on them. Animation. Gr. 4-12.

- Verbs: Recognizing and Using (11 min.)** How to identify subject, tense, verb, and three functions of verbs. Animation. Gr. 4-12.

## MATHEMATICS

- Pythagorean Theorem: Proof by Similar Figures (5 min.)** How certain principles of similar figures prove the Pythagorean Theorem. Distributed. B&W only. College.

- Pythagorean Theorem: The Cosine Formula (5 min.)** How the Theorem is applied to certain triangles, leading to the cosine formula. Distributed. B&W only. Gr. 7-College.

# SCIENCE

**Songs of America's History** (13 min.) Selected folk songs help us understand places and people associated with them. Gr. 4-12.

**Learning Music: Learning About Notes** How notes indicating melody are translated into patterns of music. Gr. 1-6.

**Learning Music: Finding the Rhythm** Note values, the beat, bar, accent, time signature, dotted and rest. Gr. 1-6.

**Learning Music: Finding the Melody** The scale, note relationships, notes, sharps, and flats. Gr. 1-6.

**Walter Foster and His Songs** (16 min.) Walter Foster's songs against a background of music. Gr. 7-12.

**Trumpet, Horn, and Trombone** (11 min.) Music techniques of playing the instruments. Distributed. Gr. 7-12.

# SCIENCE

**Newton's Laws: Principles of Flight** (11 min.) The four forces which govern flight—lift, thrust, gravity, and drag. Gr. 4-9.

**Animals Protect Themselves** (11 min.) Various ways common animals adapt to their environment. Gr. 1-6.

**How We Identify Them** (11 min.) How to distinguish birds—by their color, sounds, and actions. Color. Gr. 1-6.

**Preserving our Forests Today** (11 min.) Recent advances in forest conservation, and how forests are protected.

**Preserving our Soil Today** (11 min.) Techniques and experiments in soil conservation. Gr. 4-9.

**Earth: Changes in Its Surface** (11 min.) Illustrations of the internal and external changes in the earth's surface.

**Earth: Its Oceans** (13 min.) A comprehensive study of an important science—oceanography. Gr. 4-9.

**Earth: Its Structure** (11 min.) An analysis of the earth's structure and its interior. Gr. 4-9.

**Earth: Resources in Its Crust** (11 min.) Survey of the major useful organic and mineral substances in the earth's crust. Gr. 4-9.

**Human Body: Excretory System** (11 min.) A study of the structure and function of the excretory system. Gr. 4-9.

**Light for Beginners** (11 min.) The basic properties of light; shadows, reflections, and artificial light. Gr. 1-3.

**Microorganisms that Cause Disease** (11 min.) The structure of five kinds of animal microorganisms, and information on their destruction. Gr. 9-12.

**Sound for Beginners** (11 min.) Details of sound vibrations and how sounds take time to travel through air, solids, or liquids.

**Story of Soil** (11 min.) How man has improved soil's usefulness in many ways. Animation. Distributed. Gr. 9-12.

**Explore the Stream** (11 min.) A study of the life common to a stream and the interdependence of living organisms. Gr. 1-3.

**What Are Things Made Of?** (11 min.) The composition of matter in three states—solid, liquid, and gas. Gr. 4-9.

**Special Studies**

**Busy Harbor** (11 min.) A close-up view of the harbor's fascinating life. Gr. 1-6.

**Friendship and You** (13 min.) A high school boy discovers the requisites for true friendship. Gr. 9-12.

**Communication for Beginners** (11 min.) What modern communication devices mean for our way of life. Gr. 1-3.

**Improving America's Health** (11 min.) How health and medical services have improved life expectancy. Gr. 9-12.

**Moving Day—Timmy's New Neighbors** (11 min.) Shows that attitudes of cooperation, interest, and friendliness make moving easier. Gr. 1-3.

**Our Country's Flag** (Second Edition) (11 min.) A re-make of the earlier film, showing the fifty stars and the up-to-date "Pledge". Gr. 1-6.

**Paris—The City and the People** (11 min.) A visual tour of the famous city showing the factors which made Paris into a great capital. Gr. 4-12.

**Where Does Our Meat Come From?** (11 min.) A picture of the steps through which meat goes—from animal to market. Gr. 1-4.

# American History

**Beginnings and Growth of Industrial America** (11 min.) The development of American manufacturing from home crafts to industrialized factories. Gr. 4-12.

**Communication: Story of Its Development** (11 min.) Milestones in the history of the transmission of spoken and written language. Gr. 4-9.

**Immigration in America's History** (11 min.) The major waves of immigration to the U. S. in their historical, economic, and social contexts. Gr. 9-12.

**Pioneer Journey to the Oregon Country** (13 min.) Life on the trail, the daily routine, recreation and religion, dangers and hardships. Gr. 4-9.

**The Pony Express in America's Growth** (11 min.) Re-enactments dramatizing the brief, but exciting Pony Express story. Gr. 4-9.

# Geography

**Netherlands: Past and Present** (11 min.) The Netherlands today—a harmonious blend of tradition and modern development. Distributed. Gr. 4-9.

**New Zealand: The Land and the People** (11 min.) An exciting journey showing topography, industries, and activities of the people. Gr. 4-9.

**The Rhine: Background for Social Studies** (11 min.) An over-all view of the Rhine's influence on Europe, its history, and its role today. Gr. 4-9.

# World History

**The Byzantine Empire** (13 min.) A historical outline of the Empire and its major cultural contributions. Gr. 4-12.

**English History: Nineteenth Century Reforms** (13 min.) The factors influencing English political adjustment to the industrial revolution. Gr. 9-College.

**Imperialism and European Expansion** (13 min.) The factors which encouraged a renewal of European expansion from 1875 to 1914. Gr. 9-12.

**Life in Ancient Rome: The Family** (11 min.) A boy's typical day in ancient Rome, showing authentic dwellings, costumes, and artifacts. Gr. 4-6.

**World History: An Overview** (13 min.) The meaning of history interpreted as the record of man's effort to satisfy basic human needs. Gr. 9-12.

**World War I: The Background** (13 min.) Militaristic and nationalistic rivalries, entangling alliances, and international tensions. B&W only. Gr. 9-12.

**World War I: The War Years** (13 min.) The unprecedented scope of the War, new weapons, the German strategy and its failure. B&W only. Gr. 9-12.

**World War I: Building the Peace** (11 min.) The Big Three and the Treaty of Versailles—how it was written and what it meant. B&W only. Gr. 9-12.

# The Chemistry Laboratory Series

This series includes twenty-seven films produced by the University of Akron under a grant from the Fund for the Advancement of Education. Usable both in high school and college chemistry courses, the films acquaint viewers with all the major experiments and demonstrations normally carried out in a full year's chemistry course. Proportional, special prices per 11 minute reel: Color, \$100; B&W, \$50.

- Ammonia (1 3/4 reels, 18 min.)
- Chromium and Manganese (3 1/2 reels, 37 min.)
- Demonstrating the Gas Laws (2 reels, 21 min.)
- Determination of Atomic Weight (1 3/4 reels, 18 min.)
- Elements, Compounds, Mixtures (2 3/4 reels, 30 min.)
- Hard Water (2 1/2 reels, 28 min.)
- Heat of Solution (1 1/2 reels, 16 min.)
- Indicators and pH (1 1/2 reels, 28 min.)
- Ionic Equilibrium (1 1/2 reels, 16 min.)
- Molecular Weight of Oxygen (1 reel, 11 min.)
- Molecular Weight of Solutes (3/4 reel, 8 min.)
- Nitrous Acid and Sodium Nitrite (1 3/4 reels, 18 min.)
- Oxides of Nitrogen (1 1/2 reels, 16 min.)
- Phosphorus (1 3/4 reels, 18 min.)
- Physical and Chemical Change (2 1/2 reels, 28 min.)
- Preparation and Properties of the Halogens (3 reels, 32 min.)
- Preparation and Properties of Hydrogen (1 3/4 reels, 18 min.)
- Preparation and Properties of Nitric Acid (2 reels, 21 min.)
- Principles of Ionization (1 1/4 reels, 13 min.)
- Properties of Acids, Bases and Salts (2 1/2 reels, 28 min.)
- Properties of Solutions (2 1/2 reels, 28 min.)
- Rate of Reaction (2 1/2 reels, 28 min.)
- Standard Solutions and Titration (2 reels, 21 min.)
- Sulfur and Hydrogen Sulfide (2 reels, 21 min.)
- Sulfur Dioxide and Sulfurous Acid (2 1/4 reels, 24 min.)
- Sulfuric Acid (1 1/2 reels, 16 min.)
- Synthesis of a Compound (1 1/4 reels, 13 min.)

# Vocabulary Enrichment Program for Foreign Beginners

This series of 11 minute films is composed of well-known fables, favorite children's tales, and charming original stories—all in clearly spoken Spanish or French, using a carefully selected vocabulary. It is designed primarily for young learners, although high school students will benefit greatly from the films' conversational style. Available in B&W only with foreign language narration script.

- In Spanish:**
- Una Familia de Petirrojos (Mr. and Mrs. Robin's Family)
  - La Gallinita Sabia (The Little Red Hen)
  - Juan y Su Burrito (A Boy of Mexico: Juan and His Donkey)
  - El Patito Feo (The Ugly Duckling)
- In French:**
- L'Automne est une Adventure (Autumn is an Adventure)
  - Le Vilain Caneton (The Ugly Duckling)

# Contemporary Life Series

The four films in this series—two in French and two in Spanish—are planned to acquaint foreign language pupils with the lands and people of Spain, Latin America, and France. They will prove extremely useful in presenting a colorful picture of these countries—and, simultaneously, in strengthening basic vocabulary. All are 11 minutes in B&W only. A foreign language narration script accompanies each film.

- In Spanish:**
- España: Tierra y Pueblo (Spain: The Land and the People)
  - Geografía de Sud América: Los Cinco Países de Norte (Geography of South America: Five Northern Countries)
- In French:**
- France Actuelle: Les Pays et Ses Habitants (Modern France: The Land and the People)
  - La Vie Dans une Ferme Française (Life on a French Farm)

# HOW TO OBTAIN CORONET FILMS

**Preview:** Prints of all Coronet films are available for preview by those wishing to make selections for purchase. There is no obligation except for return postage. Simply indicate on these pages the films you would like to evaluate and send them to Coronet Films, or send a separate list of your selections.

**Purchase:** Prints of all Coronet films on these pages are available at \$60 a reel in black-and-white; \$100 in color. Films in the Chemistry Laboratory Series are \$50 a reel in black-and-white; \$100 in color. Proportional prices apply to more or less than one reel. One reel is 11 minutes running time.

**Rental-Purchase:** Prints of these films may be purchased outright at the prices quoted above, or obtained under the general provisions of the Coronet Rental-Purchase Plan. See Page 2 of the 1960-61 catalogue for details.

*Preview requests or purchase orders should be sent to Coronet Films, Sales Department, Coronet Building, Chicago 1, Illinois or to your authorized dealer.*

# CORONET FILMS

Producers of the Finest Teaching Films for More Than Twenty Years  
CORONET BUILDING, CHICAGO 1, ILLINOIS

**The Magic Camera** sfs WESTINGHOUSE b&w 33.3rpm 12 min. Structure of the eye compared to that of a camera; how the rods and cones in the retina send messages to the brain; proper placement of reading lamps. JH-A **Two Precious Pilots** 12min covers same material on a slightly higher grade level. Supplementary material includes script and "Eyes Are Rationed" 16p five copies free to teacher. JH SH

**Menacing Shadows** mp WESTINGHOUSE 20 min b&w loan. Importance of proper eating habits and diet including 7 basic food groups. Teacher's copy of book of menus, etc., free; extras @ 10c. JH-A

**Metal Shop Safety** mp MH 18min b&w \$105. Several safety rules are deliberately violated to serve as text for instructor. SH A

**Outboard Outings** mp AETNA 18min col loan. Safety precautions and "rules of the road" in boating indispensable to real pleasure in boating. Narrated by Garry Moore. SH A

**Pay the Piper** mp FAMILY 30min col \$300 b&w \$180. Dramatic presentation showing dangers of alcohol in the home. SH A

**Penelope Changes Her Mind** mp NBFU 9min col or b&w apply. A little girl learns about fire hazards. Pri.

**Rabies in Your Community** mp NFBC 18min b&w \$90. A rabid fox brings the dread disease into a north Canadian community; a dog develops the symptoms and a veterinary control is instituted despite some local opposition. JH SH A

**Safe Bicycling** mp IFB 13min col \$135 b&w \$75. Proper size, essential equipment, good riding habits (like those of an auto driver). Some examples are light, even humorous. Crawley Films prod. Int.

**Safety Adventures Out of Doors** mp EBF 11min col \$120; b&w \$60. Good safety habits pictures of children swimming, boating, camping and on playgrounds. El Pri.

**Safety or Slaughter** mp IFB 14min col \$135. Actual accident scenes shown, and their causes discussed—speed, fatigue, irritation, recklessness, discourtesy. Plea for lane marking, safety belts. SH A

**Stop Driving Us Crazy** mp MBTEMP 12min col \$125. (May be rented METHODIST \$6) Man from Mars, shaped like an automobile, is flabbergasted at earthmen's "crazy" driving and drinking habits. Religious-moral approach, ultra-modern presentation techniques. Original jazz score on 45rpm at \$1.25. Exceptionally attractive discussion guide and promotion sheet. SH A

**That They May Live** mp PYRAMID 27min col \$250 b&w \$125. Training in currently recommended methods of artificial respiration. JH SH C A

**This Will Kill You!** sfs TRAUD 16" LP 30min col \$25. Cartoon treatment of the potential hazards in improper use of electricity in everyday life. Safety award winner. JH SH A

**To See Ourselves** mp AETNA 14½min col loan. Driver, put in position to see himself from the other fellow's point of view, finds the "other driver" is not always at fault. SH A

**To Smoke or Not to Smoke?** sfs kit CANCER loan deposit 84fr 10" LP guide, poster, reprints. Shows how injurious substances in cigarettes affect the lungs; research studies in relationship of smoking and cancer; "seeks to teach, not to preach—to inform not to reform." JH-A

**Tommy Gets the Keys** mp GOODRICH 13½min b&w loan through local Goodrich Tire dealers. Teen-ager convinces his parents, with aid of a sports car racing champion, that all youngsters are not necessarily bad drivers. SH A

**To Your Health** mp CMC 10min col \$100. Evils of alcoholism told in WHO cartoon. SH A

**Understanding Heart** mp METHODIST 29min b&w r \$3. Loretta Young television program shows how one alcoholic helps another, and how a non-alcoholic wife can help her drinking husband. A

**We Have the Cure** mp CMC 14min b&w \$25. WHO mass campaigns against yaws, syphilis, and pinta. C A

**What's Your Driver Eye-Q?** mp AETNA 13 or 30 min versions b&w loan guide. Provides for active individual viewer participation as 15 different traffic situations, photographed from front seat of moving car, call for individual decisions. In the "public" version the correct answers are supplied by the film; in the classroom version they are confined to the 36p instructor's guide. SH A

## HOME ECONOMICS

**American Women — Partners in Research** mp ASSOCIATION col loan. Operation of the Research Opinion Center to ascertain likes and dislikes of housewives. Sponsored by Corning Glass. SH C A

**Arranging Flowers in Your Home** mp CORNELL 25min col \$199.50. Step by step procedures for making basic arrangements; treatment before arranging, choosing holders and vases; selecting the right position. SH A

**Building the American Dream** mp MODERN 30min col loan. The role of the home builder, improved methods

of construction, economic importance of the building industry. U. S. Gypsum sponsored. SH C A

**Choice in China** mp IDEAL col loan. SH and women's groups. Bride-to-be learns distinction between different ceramics; how china is made; collectors' items including White House service. SH A

**The Dawn of Better Living** mp WESTINGHOUSE 16min col loan. Walt Disney production showing evolution of the home from log cabin to present electrified existence. 40-page booklet contains full script and color picture. Teacher's copy free, extra @ 10c. EI-

**40 Billion Enemies** mp WESTINGHOUSE 26min col loan; free copies of 6p leaflet on household refrigeration. Role of refrigeration explained first by science teacher then by home-instructor. JH-A

**The Great White Way—To Good Laundering** mp MODERN 13½min col loan. The role of bleaches in laundering. Sponsored by Purex. SH

**HOW We Get Our Homes** 4fs SVE col set \$16.25 ea \$5 captioned. Titles: Planning the Home; Building the Foundation; Building the Shell; Finishing the Home. SH A

**Light As You Like It.** mp SUPEL 24min col loan. Decorative home lighting that borrows some of its inspiration from lighting effects in the theatre. Mass distribution booklet "The Light Side of Decorating" included. SH A

**Mealtime Magician** mp IDEAL 14½min col loan. Talking blender, with assistance from Sterling Holloway's voice, tell amusing story of its work in meal preparation. SH A

**Mystery in the Kitchen** mp NFBC 23min Col \$180 b&w \$90. Humorous, satirical treatment of improper family nourishment due to poor choice and preparation of food by the housewife. An invisible "crime detective" wrestles with this mystery. SH A

**Send Off** mp ASSOCIATION 12min col loan. Two youngsters prepare a going-away dinner from around the world recipes. Booklet of recipes for each member of class on request. SH A

**Three-Minute Cook Book** 6mp ASSOCIATION col loan. Titles: How To Select Oranges; How To Use Orange Concentrate; How To Prepare Grapefruit; How To Use Grapefruit Sections; How To Use Tangerines; How To Use Tabasco. Florida Citrus Commission. SH

**V-Men** mp WESTINGHOUSE 17min b&w loan. Importance of proper cooking methods in the preservation of essential vitamins is demonstrated in science lab tests. Folders (8p) "American Families Are Eating Their Way To Poor Health," free. SH-A

our Ticket To Better Buying mp WESTINGHOUSE 24min b&w loan. Consumer information on purchase and functioning of an electric range and a quick trip through the factory where it is made. JH-A

## INDUSTRIAL ARTS

**Automotive Electrical Fundamentals** 5sfs JAM 12" LP Set (5) \$49.50 Indiv fs & rec \$10.90. Titles: Introducing Automotive Electricity; The Cranking Circuit; The Ignition Circuit; The Regulation and Charging Circuit; The Lighting and Accessory Circuits. SH For Auto Shop and Driver Education Classes.

**Commutation of D-C Machines** mp WESTINGHOUSE 24min b&w loan. Theory and maintenance of D-C motors and generators shown in live and animation photography. SH A

JH-A
- The Story the Bible Tells** 4sfs EYEGATE two 10" LP col set \$25. For Protestant churches and church schools.
- Subi** fs CHURCHCRAFT 40fr col guide \$5. Leprous child and her dying father expelled from village are helped by Mission hospital. El JH
- Successful Teaching** 8sfs MOODY col set 8 fs 4 LP 10" @ \$48.50 with manual and lesson outline. Indiv fs \$6, rec \$2.95, manual \$1. Titles: The Teacher I & II; The Pupil; The Language; The Lesson; The Teaching Process; The Learning Process; Review and Application; The Final Test. TT A
- Sumo, A Boy of Africa** fs METHODIST 57fr b&w \$3. African boy in typical village life; goes to a mission school. Elem.
- Teaching the Bible** (series) 4 sfs CONCORDIA b&w two 78rpm records with each fs. guide. Set (4) \$40. Indi @ \$12. Titles: Teaching the Bible to the Preschool Child; . . . to Children 6-11; . . . to High School Youth; . . . to Adults.
- Teenage Challenge** mp FAMILY 30min b&w r\$9. Young sports editor of high school newspaper braves disfavor with essay on religious theme. Interesting, persuasive treatment of church-sta issue faced in youth life terms. J SH A
- Teenage Code** mp FAMILY 30min b&w r\$9. High school student tempted to cheat finds a better "code" as guide to right conduct. An answer to the argument that "everybody" cheat JH SH A
- Teen Age Rock** mp GOSFILMS 59min b&w r\$25 (free for school hour S showings). Effect on American students when an other lander gives them his sincere reactions to of younger generation. SH A
- Teenage Witness** mp FAMILY 30min b&w r\$9. Two Christian high school students help classmate beat temptation to follow a flashy tempter in delinquency. SH A
- Teenagers' Choice** mp FAMILY 30min b&w r\$9. Engaged couple plan elopement and a "dare" but become convinced that a church wedding offers better start for lasting marital happiness. SH C A
- The Ten Commandments** 10sfs CATECHETICAL col 5LPs set \$97.50. Each commandment treated in one film strip and one side of record. Roma Catholic imprimatur. JH-A
- Ten Commandments Visualized** 10 CHURCHCRAFT b&w \$20. Meaning and application to life.
- This Sustaining Bread** sfs FRIENDSHIP 73fr LP. Fs \$6 with record \$11. Symbolism of universal need for bread is expressed in modern forms to picture man's dependence on God and his fellowman. C A
- This Sustaining Bread** sfs UChC 72 LP col r \$2.50; sale with script only \$6, requires choric choir of three readers. Bread as symbol of Jesus Christ and of the brotherhood man. Prepared for use with missionary theme "The Church's Mission Town and Country."
- Three Happy Boys of Malaya** METHODIST col \$5 r\$2. A Chinese, Tamil Indian and a Malay, church are seen at play and in their varied home background. Pri Elem
- Three Sacred Objects of Judaism** JFCLA 36fr col \$6. The story of the Mezuzah, Tallit and Tefillin. Int .
- To Every Creature** mp MOODY 45min col r\$10. Difficulties faced by front-

missionaries and how modern transport and communication methods help meet them. A SH

**To Rekindle the Gift** mp METHODIST 30min col r\$8. Work of the Methodist Women's Division with emphasis on medical, educational, evangelistic and rural work. SH A

**Town and Country Cousins** fs UNCHC si 60fr col reading script \$6 r\$1.50. As rural children prepare for their harvest festival they come to better understanding with visiting youngsters from town. Elem.

**Tumba of Africa** fs UNCHC 62fr si col \$6 r\$1.50; guide. African boy moves with his family when his father is mission-trained for a kind of work available only in a larger center. Role of the church in village and town life. Elem.

**Two Dollars** sfs METHODIST two 78 rpm records and color fs r\$2.50. Cartoon type drawings tell of the stewardship of money and its uses. SH A

**The Unfinished Task** mp CONCORDIA 30min b&w r \$9. Wealthy father angered when son decides to become a missionary instead of entering family engineering firm. Designed to win support for stewardship and mission programs and to encourage young people to enter full-time Christian service. SH A

**Unto the Hills** sfs METHODIST 85fr LP col \$11 r\$2.50. Home mission work in southern U.S. mountains. Elem-A

**Upriver in Sarawak** mp METHODIST 30min col r\$8 b&w r\$6. Efforts to expand mission work into the interior of Borneo. JH-A

**Venturing Beyond Violence** sfs FELREC 58fr col 7½ips tape. \$7.50 r\$2.50. Cartoon treatment shows many ways to meet threat of violence and points up the psychological basis of non-violence. JH-A

**A Visit to Vellore** mp METHODIST 14 min col r\$6. Rajput boy's injuries fail to respond to native cures; he is healed at the Vellore Christian Hospital. JH-A

**The Visiting Teacher** fs CONCORDIA si caption. No guide. b&w \$2. Suggests methods by which teachers can heighten interest and cut down absenteeism. TT A

**The Way He Should Go** mp CONCORDIA 30min b&w r\$9. Conflict over emphasis on strict Christian training in the home is resolved when its effect is seen in action of small son returning articles he accepted without knowing they were stolen. El-A

**The Way of Nonviolence** mp FELREC 14min b&w \$35 r\$2.50. André Trocmé draws upon his experiences in East

Germany and Algeria to counter the charge that nonviolence is "Christian but impractical." JH-A

**We See His Lights** fs CONCORDIA col si \$5: Visualized worship service brings promise of hope, peace and joy. Selected hymn frames included.

**What is a Christian?** mp CONCORDIA 30min b&w r \$9. Church member hesitates to embark on personal evangelism assignment until basis of his own beliefs is clarified. SH A

**What You Ought To Want** mp METH-ODIST 14min r \$5. Bishop G. Bromley Oxnam discusses ways in which history, experience and faith help youth make the right choices. SH C

**When It Rains in Burma** sfs METHO-DIST LP col \$11 r\$2.50. A varied, colorful missionary program proceeds even during periods of frequent rains. SH A

**When Jesus Was Born** 4sfs FAMILY 20-24fr two 7" 33.3 rpm records 4min ea col Kit (4 sfs) \$19.50. Titles: **Jesus Is Born; The Shepherds' Visit; The Wise Men Bring Gifts; Growing Up In Nazareth.** K Pri

**Where Trails Meet** (10min) and **A Life for Gueve** (12min) mp UNCHC col r\$2 (both). In the first film an African mother hesitantly follows her friends into a mission clinic. The second shows the plight of a mission-educated African girl who is not accepted by the women of her village. JH SH A

**Working Together** sfs METHODIST 80fr LP col \$11 r\$2.50. Si with script \$5. Town and country churches helping each other through a group ministry. SH-A

**The World of Man: Religions** rec FOLKWAYS 10" LP. Second in series of recordings that aim at better understanding among the world's peoples. Similarities and differences in religions explored through the music of many faiths. SH C A ■

**Worship Backgrounds** 4sl CHURCH-CRAFT col set (4) \$2; ea 75c. Titles: **The Triumphant Christ; Jesus and the Children; Head of Christ; "Master,"** Mood slides for worship programs.

**Worship Programs—Christmas, Easter** CHURCHCRAFT apply. Choice of 6 color filmstrips, 2 slide sets, 2 hymnslide sets for Christmas cantata or other worship application; Choice of 4 filmstrips and 2 hymnslide sets for Lent and Easter.

**Youth Audio-Visual Kit** sfs UNCHC LP r\$2.50 ea. Titles: **We Have This Fellowship; The Faith of a Guy; Gallery of Witnesses; I Found a New World; The Measure of a Man; How Wide Is Our Circle; and Big Enough to Tackle.** SH A

**Zen Buddhist Ceremony** rec FOLKWAYS Two 12"LP \$11.90. Recorded in Japan. Extensive notes and explanatory material. C

## SCIENCE Biology & Physiology

**Anatomy** (transparencies) TWEEDY 8-x10" acetate build-ups for overhead projectors. 11 units \$69; also **Botany** 6 units, titles: **Root System, Leaf System, Flower System, Seed System, The Stem, and Use of the Microscope,** \$36. JH SH C

**Animal Town of the Prairie** mp EBF 10min col \$120 b&w \$60. Prairie Dogs and their neighbors. El-A

**Animals** 6fs CREATIVE col set \$36. Discussion base for study of mammals, reptiles, amphibians, sea animals, reptiles, birds, insects. Live photography. Int.

**Animals Move in Many Ways** mp FA 10min col \$110 b&w \$60. A few of the many methods of locomotion. El.

**Animals of Prehistoric America** mp MH 15 min col \$170 b&w \$85. Children find fossil, paleontologist explains it. Elem.

**Arctic Wildlife Range** mp THORNE 20min col \$200 r\$10. Wilderness refuge in northeastern Alaska. Caribou, grizzly bear, ptarmigan, gyrfalcon in natural habitat. Conservation principles. SH C A

**Balance in Nature** mp FILMSCOPE 17 min col \$170. Life cycle of the aphids and their enemies, the ladybird beetles. SH C

**Battle of the Bugs** mp MIDDLEHAM 11mm col \$110. War against aphids in a rose garden as waged by Ladybug, Parasitic Wasp, Syrphid Fly and Green Lace-wing. Photomacrography in color. JH SH C

**Between the Tides** mp CONTEMPORARY 20min col \$175 r\$7.50. Aquatic and beach life in tidewater area. JH SH

**Biology I** 6sfs WEDBERG b&w LP \$30. Titles: **Digestion; Respiration and Blood Circulation; Food and Health; Carbohydrates; Fats and Proteins; Vitamins and Minerals.** Recorded with DuKane discussional controls. JH SH

**Biology II** 6sfs WEDBERG b&w LP (Discussional Control) set \$30. Titles: **The Frog; Fertilization and Embryo; . . . Growth and Metamorphosis; Hydra; Protozoa; Digestion in Mam-**

mals; Digestive Adaptation in Mammals (pig, dog, cat, cow, horse). JH

**Birds and Their Songs** 4sfs MES with two 12" LPs and 24p guide \$29. Titles: **Larger Birds of Woods and Gardens**; **Smaller Birds of Woods and Gardens**; **Birds of the Open Fields and Meadows**; and **Birds of Rivers, Marshes and Shores**. More than 40 birds are pictured, with actual recordings of their calls and songs. Pri-A

**Birds: How We Identify Them** mp CORONET 11min col \$110. Two boys, with glasses and guide book, see and identify numerous species by appearance, sound and actions. Pri Int

**Birds and Their Songs** 4sfs EYEGATE col two 12" LP. Set (4 fs 2 rec) \$29. Titles: **Larger Birds of Woods and Gardens**; **Smaller . . .**; **Birds of Open Fields and Meadows**; **Birds of Rivers, Marshes and Seashores**. Int JH A

**Circulation—Why and How** mp C-W 10 min col \$110; b&w \$60. The body cells' need for food and oxygen, rest, exercise, waste disposal—and the role of the circulatory system, heart, veins, arteries, capillaries, lungs. JH SH

**Darwin Discovers Nature's Plan** fs LIFE col \$6 (lecture notebook). Life of Darwin, his books, "Origin of the Species" and trip around the world. JH SH

**Dust or Destiny** mp MOODY 42min col r\$17.50. Fascinating and mystifying phenomena of the human eye, ear and heart, as well as the bats that "see" in total darkness, and fish and bird marvels. Designed to "create a sense of awe and reverence for God's creation." SH A

**Ecology (series)** 3mp MH col Titles: **The Changing Forest** (19min \$210); **The Spruce Dog** (23min \$250); **World in a Marsh** (22min \$250). NFBC production. SH C

**The Enchanted Isles—The Galapagos** fs LIFE col \$6 (lecture notebook). Darwin's visit to this "living laboratory of evolution" and a revisit 123 years later. JH SH

**Experience With an Eel** mp MOODY 24min r\$12.50. Blind Amazonian eel locates prey by "radar" and then electrocutes it. Spiritual message relates science and the Word of God. SH A

**The Flow of Life** mp ETS 20min col \$210. Basic research in the micro-circulation of the blood and the capillary beds. JH SH

**From Generation to Generation** mp MH 30min col \$225. The human reproduction process. Film involves emotional and spiritual as well as physical aspects. A SH C

**Frog Anatomy** mp INDIANA 17min col \$150 b&w \$75. Dissection of a bull frog. SH C

**Fundamentals of the Nervous System** mp EBF 16min col \$180 b&w \$90. Functions, divisions and major tasks of the nervous system shown by means of live and microphotography, animated drawings and medical techniques. JH SH C

**The Grass Blade Jungle** mp BAILEY 11min col \$120. Microscopic plant and animal life close at hand everywhere. Elem JH.

**The Great Polar Whale** mp AV-ED 10-min col \$100. The importance of the whale to Eskimo life. E1-A

**Happy Little Hamsters** mp PORTA-FILMS 13½min col \$135 b&w \$75. Told as a story suitable for lower elementary grades, the film follows a female hamster in detail through her courtship, motherhood and the raising of her family of eight children. Elem-A

**High Arctic: Life on the Land** mp EBF 22min col \$240 b&w \$120. Plant and animal life in struggle for survival under harsh climate. JH-A

**The Honeybee** mp AV-ED 16min col \$150 b&w \$75. Complete story, including the Von Frisch experiments concerning the bees' color perception. E1-C

**The House Fly** mp EBF 17min col \$180. Second edition of well known subject. JH SH

**The Human Body: Excretory System** mp CORONET 13½min col \$137.50 b&w \$75. Main organs, the kidneys; filtration of wastes; reabsorption of needed nutrients; regulation of composition of the blood. Role of the skin in removing water from the body. SH JH

**Life Before Birth** mp CAROUSEL 26-min b&w \$135. Chick embryo reveals mechanism by which the complex individual develops from the single cell. A CBS "Conquest" program. SH C

**Microorganisms That Cause Disease** mp CORONET 11min col \$110 b&w \$60. Fungi, bacteria, viruses, rickettsiae, protozoa. How pathogenic microorganisms cause infectious disease through the destruction of cells. SH JH

**Migration of Birds—The Canada Goose** mp EBF col \$120 b&w \$60. Complete cycle, northward flight to nesting grounds, raising the young and teaching them to fly, defending against natural enemies, flocking and finally the southward flight. Elem JH

**Mother Love** mp CAROUSEL 26min b&w \$135. The infant-mother relationship; studies in rhesus monkey colony demonstrate that the most important factor is bodily contact, holding and nestling, with dire results if this is denied. SH C A

**Poultry on the Farm** mp EBF 11min col \$120 b&w \$60. A day in the life of chickens, ducks and turkeys, including closeups of incubators hatching. Pri Elem

**Sounds of Insects** rec FOLKWAYS 12" LP \$5.95. Records by Albro T. Gaul. Courting, eating, proclaiming territorial rights, motion, etc. SH C

**Principles of Endocrine Activity** mp INDIANA 16min col \$150 b&w \$75. Location and function of the seven important endocrine glands; derivation and effect of three hormones; the "target organ" concept; coordinating and controlling functions. SH C A

**Voice of the Insect** mp CAROUSEL 26-min b&w \$135. Science now knows how insects communicate with one another and can duplicate their sounds as a means toward their greater control SH C A

**The Worlds of Dr. Vishniac** mp ETS 20min col \$210. Microbiologist shows life functions of one-celled animals; satisfactions to be found in pursuit of the life sciences are highlighted. JH SH

## FULL - COLOR 2" x 2" SLIDES

227. External Parts of Fish

### To MAKE YOUR BIOLOGY TEACHING EASIER AND MORE EFFECTIVE.

- A new and outstanding series of beautiful Kodachrome Slides are now available for your audio-visual program.
- Each slide has the specific aim of imparting a definite bit of knowledge.
- A 36-page Manual is provided that explains each in detail.
- Write for our brochure in color that lists over 700 unusual 35-mm. slides that cover every phase of BIOLOGY . . . plant and animal structures, physiology, functions, and classification of all major groups.
- More than 80,000 sold first year! None returned.

A SELECTED SET OF 170 SLIDES WITH MANUAL — \$85.00

Serving education, science & industry for more than a third of a century.

## SCIENCE General

**Adventures in Science: The Size of Things** mp FA 10min col \$110 b&w \$60. The relationships of size, bulk, weight and strength interestingly pictured and discussed in terms of a mouse or a beetle enlarged to the size of a man. JH SH

**Air** 5fs VISUAL col set \$19.50. Titles: What Air Is; What Air Does; What Air Pressure Is; Using Air Pressure; Using Compressed Air. Int

**Airplanes, Jets and Rockets** 6fs JAM col set \$31.50; indiv fs \$5.75. Titles: What Makes an Airplane Fly? How Is an Airplane Controlled? Safety in Flight; How Do Helicopters Fly?; How Do Jets Fly?; Rocket Power for Space Travel. El JH

**Airplanes: Principles of Flight** mp CORONET 11min col \$110 b&w \$60. Aerodynamic principles demonstrated by in-flight and animation photography as applied in airplane propellers and helicopter wings; lift, thrust, gravity and drag; aircraft controls. Int. JH.

**Aristotle and the Scientific Method** mp CORONET 13½min col \$137.50 b&w \$75. Departing from Plato's ideas, Aristotle observes, experiments, classifies, generalizes on basis of experi-

ence; the scientific method; foundations for such sciences as botany and zoology. JH SH

**Atomic Energy** (series) 5fs VISUAL b&w Set \$13.50. Titles: Atomic Concepts—Early Ideas; Atomic Concepts—Modern Views; The Nucleus; Story of the Atomic Bomb (Atomic Energy); Survival During an Atomic Attack. JH SH

**Barrel Number One** mp VWF 29min b&w loan. Documentary treatment of drilling and processing oil. JH SH

**Basic Electricity** (series) 4mp UWF b&w. Titles: AC Parallel Circuits (5-min \$10); AC Series Circuits (4min \$10); Capacitance on AC Circuits (5-min \$11.40); Inductance on AC Circuits (7min \$15.75). (U.S. Navy) SH A

**Basic Primary Science** 6fs SVE si col set (6 boxed) \$24.30 indiv \$4.50. **Finding Out How Plants Grow; . . . How Animal Babies Grow; . . . How You Grow; . . . About Things Around You; . . . About Land, Air and Water; . . . About the Sky** Pri Gr I&II

**Black Patch** mp BRANDON 18min b&w \$95 r \$5. A little mountain goat grows up to lead his herd against the dangers of wolves and human hunters in the Tian-Shan Range in Central Asia. Survival in stern habitat, conservation, respect for courage and resourcefulness of wildlife. Eval. ESAVG, EFLA. Pri-A

**Blazing a Trail to the Stars** mp BRAN-DON 46min col r\$35. Leningrad Popular Science Studios production, English narration. The story of the Sputniks and of a proposed space station, with biographical introduction about pioneer rocket theorist Tsiolkovsky, an obscure country school-teacher. JH SH C

**Boy Scientist** (series) 5fs LONG col set \$23.50 indiv \$5. Child cartoon characters, captioned. Titles: **Bob Builds a Telescope; Bob's Rocket; Bob Visits the Moon; Bob's Microscope; Bob Visits an Atom.** El (3-5)

**The Compass** mp MH 11min col \$130 b&w \$65. Boy learns about principle and use of compass and applies the knowledge in meeting a camping trip emergency. Elem. JH

**Conserving Our Forests Today** mp CORONET 10min col \$110 b&w \$60. Value of the forests for lumber, grazing, water and soil conservation, recreation; recent advances in protection include use of helicopters and plastic hose in fire fighting, insecticides, aerial seeding and mechanical transplanting. JH Int.

**Crystals—An Introduction** mp BELTEL 25 min col load. Demonstrates the orderly arrangement of atoms in the crystalline state and relation of this arrangement to the physical properties of the substances. For students of electrical engineering and some

- courses in physics, chemistry and metallurgy. C
- Down to Earth** mp MODERN 13min col loan. Cartoon treatment of problem of re-entry and recovery of rocket nose cone, sponsored by the Avco Corporation, SH C A
- The Earth (Series)** 4mp CORONET 11 min col \$110 b&w \$60 (except Its Oceans" 13½min col \$137.50 b&w \$75. Titles: **Changes in its Surface; Resources in its Crust; Its Structure; Its Oceans.** JH INT
- The Earth and its Moons** 6fs FFE col set \$42, indiv \$7.50. Titles: The Earth's Shape and Size; Motions of the Earth in Space; The Earth as a Planet; Exploring the Space Around the Earth; Information from Satellites; The Moon. JH SH
- The Earth—Our Planet** mp BRANDON 20min b&w \$110 r\$5. Polish-made instructional film proceeds from Copernicus' theory to present day knowledge of the nature of our earth. Noteworthy score by Polish composer Panufnik. JH SH
- Earth Satellites—Explorers of Outer Space** mp EBF 17min sd col \$180 b&w \$90. How man-made satellites stay aloft, what we learn from them, what we may look forward to, Int JH SH A
- The Earth's Surface** 4fs FH col. Titles: The Land and Water We See; Rocks and How They Change;" Soil for Plants; How the Earth's Surface Changes. Pri Elem
- Electricity: How to Make a Circuit** mp EBF 11min col \$120 b&w \$60. Three primary grade students set up a telegraph between their house and a tree house in the yard. Emphasizes uses and principles of the dry cell. Pri Elem
- Elementary Science Laboratory** 6 cardboard 4-color cutout kits available free from (some) local Coca-Cola bottlers. Models, accessories, assembly instruction sheets, teachers' guides and take-home material for students on 1) Earth in Space; 2) Communication by Sound and Light; 3) Weather; 4) Magnetism and Electricity; 5) Living Things; 6) Machines. El
- The Ever-Changing Earth** 6fs SVE col set \$32.40 indiv \$6. Titles: **Work of Running Water; Work of Wind; Work of Ground Water; Work of the Sea; Work of Snow and Ice; Work of Internal Forces.** Text, vocabulary and question frames. Captions. Int JH
- Explaining Matter: Molecules in Motion** mp EBF 11min col \$120 b&w \$60. Relates the characteristics of solids, liquids and gases to molecular motion. Uses materials common to everyday experience of the students, plus animation to explain more complex ideas. JH Reviewed ESAVG 9/59
- Exploring the Edge of Space** mp ETS 20min col \$210. Plastic balloon technology as applied to space reconnaissance. Interdependence among scientific disciplines. JH SH
- Exploring the Moon** mp MH 16min col \$180 b&w \$90. Imaginary flight; areas are identified with superimposed labels; simulated landing JH.
- Exploring With Science "shortstrips"** EBF 12 fs (ea 14fr) col set \$19.90. Filmstrips are mounted in transparent envelope parallel with quiz-explanatory card for individual hand viewing; but may be removed for group projection. Pri.
- We Explore the Stream** mp CORONET 11min col \$110 b&w \$60. Boy and girl find snails for their aquarium and observe interdependence of plant and animal life along a stream near their home. Pri
- The Fallout Atom** mp CAROUSEL 26min b&w \$135. Tests on human guinea pigs to determine how much radio active material the human can tolerate and what Strontium 90 fallout may do to the nation's health. JH SH C A
- The Far Side of the Moon** mp EBF b&w 55 ft. This supplementary footage, photographed by the Russian "moon-shot", is furnished free to be added to in-service prints of **A Trip to the Moon.**
- Fire Magic** mp IDEAL 12½min col loan. Science Show of the late Dr. Llewellyn Heard preserved on film. The fire "triangle" (fuel, oxygen, kindling temperature); types of combustion and how they are harnessed to perform useful tasks. SH C (Midwest)
- First Soviet Earth Satellites** mp BRANDON 28min b&w r\$7.50. A review of principal attempts at space travel from the 19th century through the launching of Sputnik II, including the training of the dog it carried. JH-A
- The Formation of Ferromagnetic Domains** sfs BELTEL 45min 132fr 2LP. Discusses the physical principles of domain formation with particular emphasis on the energies involved in the process. C
- Fundamentals of Science—Grades 3 and 4** 9fs EYEGATE col \$25. **A Visit to a Weather Station; Weather Maps and Forecasting; Living Things Need Food; Our Earth Is Part of the Solar System; Simple Machines; Messages Travel and Are Recorded.**
- Galileo** mp CORONET 13½min col \$137.50 b&w \$75. The struggle for the right of the scientist to question tradition. Disproves Aristotle, confirms Copernicus, by experiment and demonstration. JH SH
- General Science** sl CREATIVE VISUALS col apply. Fifty slides with 102 progressive overlays on astronomy, anatomy, meteorology, Electricity, Botany, the Atom. On 8" x 10" color-impregnated plastic sheets for overhead projector. SH
- General Science L** 6sfs WEDBERG b&w LP discussion control. Titles: **Energy of Muscles; Energy of Air and Water; Heat—Conduction and Convection; Heat — Radiation; Making Thermometers; Reading Thermometers.** JH
- Heat** 4fs FH col. Titles: **How Heat Helps Us; Where Heat Comes From, How a Thermometer Works; How Heat Moves.** Elem.
- Horizons of Science** 10mp ETS 22min ea col set \$2,000. Produced in association with the National Science Foundation. Titles: **Visual Perception; The Worlds of Dr. Vishniac; Exploring the Edge of Space; The Mathematician and the River; Project Mohole; "Thinking" Machines; Rocket Combustion; New Lives for Old; The Astronomer's Universe; The Capillary Bed and Microcirculation of the Blood.** JH SH
- How Electricity is Produced** mp DOWLING 11min col \$110. Friction, chemical, and mechanical action demonstrated. Induction principle discovered by Faraday. Simple magneto generator. Hydro-electric plant. El JH
- How Seeds Are Scattered** mo MH 10 min, col \$125, b&w \$60. The many ways in which seeds are dispersed by wind, water and animals. EL JH
- How To Collect and Preserve Plants** mp ILLNAHIST 13½min col loan on 38c prepaid postage and insurance. Techniques and equipment needed for a beginners' plant collection; classification; mounting of specimens. SH
- How Vast Is Space** mo ATLANTIS 18min col \$200. Based on the book "Cosmic View" by Kees Boeke. For JH and SH science and math.
- The Inquisitive Giant** mp CONTEMPORARY 28min b&w \$125 r\$7.50. The workings of the giant radio telescope at Jodrell Bank, England, on basis of analysis of radio waves from outer space. SH C
- Insect Collecting** mp DOWLING 14min col \$135. Collecting as an important part of any study of insect life. Where to look and how to capture. How to raise to adult stages Int JH SH
- Journey Into Spring** mp CONTEMPORARY 30min col \$250 r\$10. Animal, pond and plant life on the English countryside at springtime. JH
- Life Among the Penguins** mp BRANDON 20min b&w \$110 r\$7.50. Life cycle of the Antarctic Imperial penguin. JH
- Life on a Dead Tree** mp FA 10min col \$110 b&w \$60. Two boys explore an old dead tree and find it the home of many plants and animals. Lizards, beetles, crickets, slugs, ants, salamanders and many more. El JH
- Life Long Ago** 6fs SVE col set \$32.40 indiv \$6. Titles: **Up Through the Coal**

Age; When Reptiles Ruled the Earth; Mammals Inherit the World; How We Know about Life Long Ago; **Hunting Fossils; Stories that Fossils Tell.** Correlate with Row-Peterson Basic Science readers. Int JH

**Magnets** 6fs JAM col set \$31.50 ea \$5.75. Titles: Discovering Magnets; Different Kinds of Magnets; Magnets Help Find Direction; Magnets Can Attract Through Objects (K through 3); and What Is Magnetism?; Magnetic Fields (4 through 6).

**Microscopic Wonders in Water** mp DOWLING 11min sd col \$100. JH SH

**The Months Before Birth** (series) 8mp INDIANA-NET ea 29min b&w @ \$125. Titles: **The Physiology of Reproduction; The Beginnings of Pregnancy; The First Visit to the Doctor; Nutrition and Dental Care in Pregnancy; The Middle Months of Pregnancy; The Birth of the Baby; The Weeks After Birth.** SH C A

**Mystery of the Sun** mp CAROUSEL 26min b&w \$135. Rocket astronomy reveals constantly new solar information. A CBS "Conquest" production. JH SH C

**Mystery of Three Clocks** mp MOODY 29min col r\$12.50. The uncanny time sense of the cicada compared with the "alarm clock" mechanism of the human brain. The spiritual point is made that although man can make his own choice he cannot control the result of that choice. SH A

**Nature Stories for Primary Science** 6fs LONG col. Titles: Annie the Ant; Sammy Squirrel; Lano the Fish; Betty Butterfly; Freddie Frog; Chippy Chipmunk. Pri.

**Isaac Newton** mp CORONET 13½min col \$137.50 b&w \$75. Researches in the binomial theorem, differential and integral calculus, theory of light, law of gravitation, and laws of motion dramatically reenacted; the impact of Newton's genius on physical science and mathematics. JR SH

**The North American Buffalo** fs STANBOW col \$5. Habits, growth, historic role, domain, conservation in park lands. NBC production E1-JH

**The Ocean of the Air** mp UWF 13½min col \$135. Thousand mile thick blanket of gases, dust and moisture, its role as a life-supporting and protective element, and in the conquest of space. JH SH

**On the Border of Life** mp FILM IMAGES 9min col \$125. Biological research on the embryo cell (France). C SH

**The Onion** mp IFB 11min b&w \$50 r\$2.50. Life cycle shown in time lapse and microphotography. BIS production. JH SH C A

**Origin of Weather** mp CAROUSEL 26min b&w \$135. Three of the nation's

foremost weather experts explain in layman language the creation and effect of storms, calms and freak weather. CBS "Conquest" program. JH SH C A

**Our Outdoor Friends** 6fs CURRICULUM si col \$3.95 ea. Birds and animals in their natural habitat. Evaluated ESAVG 6/59. JH

**Partnerships Among Plants and Animals** mp CORONET 11min col \$110 b&w \$60. Explores the concept of adaptation through interdependence; examples include "partnerships" between termites and protozoa, ants and aphids, hermit crab and bryozoa, algae and fungi in lichen, tick bird caraboas, red clover and nitrogen-fixing bacteria. Int

**Project "Mohole"** mp ETS 20min col \$210. Geologists and geophysicists plan to drill through the earth's crust, through the Mohorovic Discontinuity and on into its mantle. The ocean floor is studied to locate a good starting place. JH SH

**The Race for Space** mp MH 54min b&w \$250. American and Soviet rocket films, Hitler's V-2; Sputniks I and II; our Explorer I. Academy Award nominee. SH A

**Reaching for the Moon** mp CAROUSEL 26min b&w \$135. Chronology of man's efforts culminating in Cape Canaveral and the Soviet lunar explorations. Scientists discuss plans for landing and what we could learn there. CBS "20th Century" program. JH SH C A

**The Realm of the Galaxies** mp ETS 2min col \$210. An inquiry into the farthest reaches of the universe with Dr. Allan R. Sandage of the Mt. Wilson and Palomar Observatories. JH SH

**Red River of Life** 2mp MOODY col Part I, 29min r\$17.50; Part II, 33min r\$17.50; both r\$30. Story of circulation, with astounding pictures taken inside the human heart. In Part II radioactive tracer atoms show the speed with which the blood carries food and oxygen to the trillions of body cells. A positive Christian message concludes each film in this "Sermons from Science" series. SH A

**Rockets and Satellites** mp UWF 13½min col \$135. The structure of the rocket and function of its various parts; principles of jet propulsion; solar batteries; instrumentation; launchings; orbit and problems in outer space. Others in this elementary science series, same length and price: **The Ocean of Air; Weather Scientists: Electricity in our Lives; Way Stations in Space; Light, Heat.** Int JH

**Rockets—How They Work** mp EBF 16min sd col \$180 b&w \$90 Action-reaction principle, Rocket Fuels. Guidance methods. Int JH SH A

**Rocks and Gems** mp AV-ED 10min col \$100 b&w \$50. How to recognize different types by color, lustre, hard-

ness, weight and crystal formation. Where they are found, how they were formed, how they are used. EL-C

**Science** (transparencies) TWEEDY acetate build-ups 8x10" for overhead projector. **Astronomy** (9 units) \$33; **Meteorology** (7 units) \$36; **Atomic Science** (7 units) \$36; **Electricity** (10 units) \$33. Also available are series on Botany, Anatomy. Complete general science "100 Set," 50 units, mostly multiple overlays, \$231 including leatherette carrying case (separately @ \$9.75). JH SH C

**Science Course** 37fs VISUAL b&w. Physics (7fs 243fr) \$12; Chemistry (10fs 460fr) \$18; Biology (9fs including Microbiology 338fr) \$20; General Science (11fs 436fr) \$20. JH SH-1

**Science for Better Living** 8fs SVE si col set \$39.50 indiv \$5.50 96pp guide. Correlated with Harcourt-Brace "You and Science." JH.

**Science Opens New Doors** fs NYTIMES 59fr b&w \$2.50. Impact on man's way of life caused by new science discoveries. JH SH

**Science Slides** FILMSCOPE col ea 50¢. Several hundred 2x2. Animals, birds, reptiles. JH SH C

**Seasonal Changes in Plants** mp MH 11min col \$125; b&w \$60. Why and how plants change with the seasons—annuals, biennials, perennials. EL JH

**AS NEW AS TOMORROW!**

Write for preview

**Secrets of a Volcano** mp CAROUSEL 26min b&w \$135. Spectacular eruption of Kilauea volcano, studied by U.S. scientists results in significant new discoveries about the inside of our earth. JH SH C

**Semi-Conductors** mp BRAY 43min b&w \$100 r\$10. **PART I** (21min) gives each part basic physics of electron flow in semi-conductor materials and its application as an amplifying device; **PART II** (22min) fundamental of low-frequency amplification; P-N Junction characteristics and transistor symbols; common emitter, base and collector circuits. SH C

**The Solar System** 6fs FFE col set \$42 indiv \$7.50. Titles: Introduction to the Solar System; Mercury and Venus; Mars; The Giant Planets; Between the Planets; Our Sun. JH SH

**Sound for Beginners** mp CORONET 10-min col \$110 b&w \$60. Vibration as explanation of sound phenomena, through air, solids, liquids. Pri.

**Space Guidance and Control** mp UWF 10min col \$90.27. Simulated space flight of a manned vehicle; explanation of the guidance system, inertia, acceleration, deceleration, control problems. SH C A

**Spider Engineers** mp MOODY 15min col The Orb-weaver, the Diving Spider and the Trapdoor Spider demonstrate the skill and versatility of their species. Part of "Science Concepts" series. Int JH SH

**Stars and Star Systems** mp EBF 16min b&w \$90. The vastness of the heavens as observed by the astronomer's telescope, the radio telescope and the observation balloon, the expanding universe. JH SH

**The Story of Hurricanes** mp PATHE 6min b&w \$30. The big winds, where they come from, how they arise, how their courses are charted, how advance warning minimizes damage. E1 JH SH

**The Story of Soil** mp CORONET 11min col \$110 b&w \$60. Animation is used to develop story of evolution of soil, and man's interference with natural partnership between soil and suited vegetation. Need to preserve natural balance of climate, soil, plants, animals and man. JH SH

**Surface of the Earth** mp AV-ED 10min col \$100 b&w \$50. The great variety of surface and the causes that contributed to these formations. E1-C

**Tide Pool Marine Life** 12 flat pictures 11x14" in color, captioned, text on back, rounded corners and pinhole punched, **FILMSCOPE** \$11.95 discounts to schools, etc. Titles: Shoreline, Sea Anemone, Brittle Star, Knobby Starfish, Sea Urchin, Hermit Crab, Shore Crab, Cancer Crab, Goose Barnacles and Mussels, Fixed Snail Tubes, Chitons, Sea Hare.

**Time and Eternity** mp MOODY 43min col r\$20. The "time microscope" magnified a split second, and the

"time compressor" squeezes days and weeks into minutes. Religious message at end presents the reality of eternity as scientific fact. SH A

**Transistors: Low Frequency Amplifier** mp UWF 15min b&w \$29.79. Application in common base and common emitter amplifiers. SH C

**A Tree is Born** mp UWF 29min col \$137.28. USDA production showing techniques used by research scientist to produce hybrid pines through controlled pollination. HS C TV

**Trees and Forest Conservation** 4f DOWLING 23-48fr b&w \$10.50 ea \$3. Titles: Trees — the Oldest and Largest Living Things; How Trees Grow Why Trees Are Important; Growing Trees for Tomorrow. Int.

**A Trip to the Moon** (revised) mp EBI 16min col \$180 b&w \$90. The lunar probe footage, including Soviet pictures of the dark side of the moon are included in the revision. Owner of the 1958 release may obtain supplemental footage to update their print Int-A

**Understanding Electricity** 7fs JAM col set \$36.50 indiv \$5.75. Titles: What Is Static Electricity?; What Is Current Electricity?; How Most Electricity Is Produced; Producing Small Amount of Electricity; Electromagnets and How They Work; How Is Electricity Used in the Home?; and Using Electricity Safely. Int JH

**Volcano** mp STERLED 20min b&w \$45 Various types of volcanoes, their causes and effects. JH SH

**Water and Soil** 4fs DOWLING 25-41fr b&w \$10.50 ea \$3. Titles: The Water Cycle; How Water Power Produces Electricity; Why Water Is Important Conserving Water and Soil. Int.

**Weather Scientists** mp UWF 13min col \$135. Work of the U.S. Weather Bureau and cooperating scientists and agencies; so many teletype reports are received that an electronic computer is required to process them for immediate results. JH SH

**What's Inside the Earth** mp FA 13min col \$135 b&w \$70. Wells, mines, volcanoes, seismographs; crust, mantle core. Elem JH.

**The Whooping Crane** fs STANBOW col \$5. Live photography and paintings of past flocks; stern measures to prevent extinction of rare species. Evaluated ESAVG 12/59. NFBC production. E1-A

**Wind at Work** mp DOWLING 11min col \$110. What makes wind; effect of heat and cold; erosion; rain, snow, seed dispersal; how boats sail and planes fly. Elem Int

**The Wonder World of Science** (For Grade 5) 12fs SCRIBNERS col. Titles: Soil for Plants; Nongreen Plants; Keeping Correct Time; Exploring the

20 Nassau Street, Princeton, New Jersey

he sternum is removed, revealing the frog's heart. From "Frog Anatomy" produced by the Indiana University Audiovisual Center.

Rocks Around Us; Exploring Matter; Air, Our Ever-Present Servant; Why Winds Blow; Why an Airplane Flies; How Did Our Solar System Begin?; Natural and Man-Made Moons; What Will Hatch from That Egg?; Mineral Riches of America. Int.

he Wonderworld of Science (For Grade 6) 12fs SCRIBNERS col. Titles: New and Old Ways of Preserving Food; Let's Build a Weather Station; Exploring Storms; Exploring Magnetism; Electromagnetism at Work; Producing Electricity; Electricity at Home; Making Music with Wind and String; Exploring the Sky; Sunset and Eclipse; The Doctor Examines You; Weapons Against Disease. Int. JH

one Melting sfs BELTEL 45min 133 fr 2 LP. Loan. Describes new methods of ultra-purifying solids and controlling the distribution of impurities. Four parts, may be shown singly or consecutively: I: Introduction, II: Theory; III: Techniques; IV: Leveling, Melting, refining. C

## SCIENCE

### Physics & Chemistry

acids, Bases, and Salts. mp CORONET 22min col \$220 b&w \$120. The classical Arrhenius theory (1887), Bronsted and Lowry, Gilbert Lewis. Preparation of acids, bases and salts in laboratory and commercially, and their household and industrial uses. SH

Ammonia mp CORONET 18½min col \$175 b&w \$87.50. Physical and chemical properties shown by a variety of reactions. Ammonia water as a base and as a precipitant. Equations. C SH

Animals Protect Themselves mp CORONET 11min col \$110 b&w \$60. Boy's trip through woods turns up examples of protection by flight, coloration, structure, defense. Pri Int

Atomic Energy (series) 5fs VISUAL set b&w (290 fr) \$13.50. Titles: Atomic Concepts—Early Ideas; Atomic Concepts—Modern Views; The Nucleus; Story of the Atomic Bomb—Atomic Energy; Survival During an Atomic Attack. JH SH C

Atomic Energy in Canada mp NFBC 28min col \$260 b&w \$130. The research

center at Chalk River, Ontario, and site of Canada's first reactor. Principles of nuclear fission and their applications. JH SH A

Atomic Power and the United States mp UWF 27min b&w \$71.10. (USIA). The United States offers atomic fuel and research findings to other countries, under international agreement, on the five types of nuclear reactors designed by government agencies and private industry. SH C C

Brattain On Semiconductor Physics mo BELTEL 30min b&w loan. Nobel Laureate Walter H. Brattain demonstrates thermal emf, photo emf, and rectification, and introduces a simple mathematical model which describes the observed properties of semiconductors. The history, impact and new semiconductor phenomena are also briefly treated. C

Chemical Change mp MH 12min col \$140; b&w \$70. Difference between chemical and physical change; tests used by chemists. EL JH

Chemistry Film Set 18mp CORONET col b&w steel cabinet inel when set is bought. Titles: Introduction to Chemistry; Using the Laboratory; Laws of Conservation of Energy and Matter; Laws of Gases; Oxygen; Hydrogen; Properties of Water; Water for the Community; Acids, Bases and Salts; Ionization; Solutions; The Halogen's; Nitrogen and Ammonia; Nitric Acid and the Nitrogen Cycle; Carbon and its Compounds; The Colloidal State; Metals and Non-Metals; Sulfur and its Compounds. SH

Chemistry Laboratory Series 27mp CORONET 11 to 37½min col b&w. The series was made at the University of Akron by Thomas Sumner, Ph.D., produced and tested with the aid of a grant from The Fund for the Advancement of Education. Titles are listed and described individually. CORONET also offers 16 earlier films in the same subject area.

Chromium and Manganese mp CORONET 37½min col \$350 b&w \$175. Oxidation-reduction is central theme in discussion of properties of these elements. Ion-electron half reaction method. Chromic-metachromite chromate-dichromate relationships. C.

The Colloidal State mp CORONET 16 min col \$165 b&w \$90. Particle size relative to solutions and suspensions. Photomicrography and animation illustrate reactions and interactions. Survey of industrial applications of colloidal chemistry. SH

Demonstrating the Gas Laws mp CORONET 21min col \$200 b&w \$100. Boyle's Law; Charles' Law; Combined Gas Law demonstrated and discussed. Produced by University of Akron. C.

Determination of Atomic Weight mp CORONET 18½min col \$175 b&w \$87.50. Specific heat of copper, determined experimentally, is used to

calculate an approximate atomic weight for copper. The equivalent weight is determined by reducing a known quantity of copper oxide with hydrogen to calculate atomic weight in conventional way. C.

Electromagnetic Spectrum chart WESTINGHOUSE 40x30½", 8 color on vellum ready for hanging, \$2. Spectra shown: Photographic; X-ray; Radio; Induction Heating; Ultraviolet; Infrared. Their range, relationship, definitions, formulas. Glossary. SH C

The Electron Tube chart WESTINGHOUSE 25x36" printed in 8 colors on heavy linen paper, reinforced for hanging. Basic information on operation, types and applications. SH C

Electronic Dynamic Demonstrator TRANSVISION 5 ft x 3 ft board mounting circuits for operating radio and TV receivers, built step by step in teaching principles of physics, electricity and electronics. Solderless connectors. SH C

Electronic Mock-Ups kits SCIENCELECT. Do-it-yourself kits for students include assembly boards and all necessary components. Basic Electricity (29 experiments) \$85; Basic Electronics (31 experiments) \$165, with tubes \$180; Basic Radio (60 experiments) \$195, with tubes \$210; Basic Television (12 experiments) \$119. SH C.

Elements, Compounds, Mixtures mp CORONET 30min col \$275 b&w \$137.50. Iron and sulfur are the elements chosen to illustrate chemical and physical properties. C.

Evolution of Power mp AV-ED 10min col \$100 b&w \$50. Man's progress from muscle power to the jet age. EI-C

Explaining Matter—Atoms and Molecules mp EBF 14min col \$150 b&w \$75. Elements, compounds and mixtures explained in terms of atoms, molecules. The "building blocks of matter" in varied combinations, producing varying results. Int JH SH

Glass Eyes That See mp MOODY 13min col r\$6. Demonstrations of nature and properties of light by aid of the electronic eye, e.g., sound is piped across a room on a beam of invisible light. SH A

God of the Atom mp MOODY 40min col r\$12.50. Equipment and techniques used in atomic research; actual pictures of the Nagasaki and Bikini explosions. Also Revised Version 28min col r\$12.50 including obliteration of a test city and of a South Pacific isle. Religious note is on man's spiritual bankruptcy and need for rebirth. SH A

Hard Water mp CORONET 28min col \$250 b&w \$125. Operation of ion exchange columns in water "softening." Methods of determining total, permanent and temporary hardness in a sample of tap water. SH C

Kevin Smith, executive producer of films for the Physical Science Study committee of Education Services Incorporated, presents an American Film Festival Blue Ribbon award for the high school physics film "Crystals" to director Richard Leacock of Andover Productions and the Physical Science Study committee, and to the film principal, Dr. Alan Holden of Bell Telephone Laboratories, also a committee member.

**Heat of Solution** mp CORONET mp 16 min col \$150 b&w \$75. Heat evolved in dissolving zinc sulfate in water is measured and the molar heat calculated. Principles and construction of calorimeter. C SH

**Hydrogen** mp CORONET 13½min col \$137.50 b&w \$90. Discovery; three methods of production from water; industrial application; role in nuclear developments. SH

**I Choose Chemistry!** mp BAILEY 15min col \$150 r\$7.50; b&w \$75 r\$5. A ninth-grader gets a chemistry set for his birthday and takes it to school. His interest in the subject leads to a career. JH SH

**Indicators and pH** mp CORONET 28min col \$250 b&w \$125. Effect of varying concentrations of hydrochloric acid on methyl violet and methyl orange indicators. The pH of a solution of acetic acid is determined and ionization constant calculated. C SH

**Ionic Equilibrium** mp CORONET 16min col \$150 b&w \$75. "Common ion" effect demonstrated with acetic acid and acetic salt, hydrochloric acid and chloride salt, along with appropriate indicators. Formation and solution of precipitates. C SH

**Ionization** mp CORONET 18½min col \$192.50 b&w \$105. Background (Faraday, Arrhenius). Demonstration of how ions form. Electrolytes, dissociation, electrovalence, covalence. Applications in electroplating, Thyatron tubes, Geiger counters. The ionosphere. SH

**Ionization and Ionic Equilibrium** mp INDIANA 15min col \$150 b&w \$75. Animation photography elucidates concepts of ionization, dissociation, and equilibrium, and leads into the more difficult concepts of the ionization constant and buffered solutions. SH C

**Learning Physics** (series) 41mp MODERN (for PSSC) approx 20 min. r\$6 ea. Titles: Learning Physics: Short Time Intervals; Long Time Intervals; Measuring Large Distances; . . . Short Distances; Change of Scale; Measurements; Straight Line Kinematics; Vectors; Definite and Multiple Proportions; Atoms and Spectra; Molecules; Crystals; Behavior of Gases; Introduction to Optics; Pressure of Light; Speed of Light; Simple Waves; Forces; Inertia; Inertial Mass; Falling Bodies; Deflecting Forces; Simple Harmonic Motion; Frames of Reference; Solar System Kinematics; Elliptic Orbits; Energy and Work; Mechanical Energy and Thermal Energy; Conservation of Energy; Coulomb's Law; Millikan Experiment; Coulomb Force Constant; Electric Fields; Electric Lines of Force; Moving Charges; Electric Energy; Magnet Laboratory; Electrons in a Uniform Magnetic Field; Mass of the Electron; The Electromagnetic Spectrum; Photons; Interference of Photons; The Franck-Hertz Experiment. These are the films developed by the Physical Science Study Committee, Watertown, Mass. SH C

**The Magnetic Bottle** mp UWF 11min b&w \$48.59 (USIA). Research seeking a fusion process for development of unlimited hydrogen power; experimental fusion machine in this new magnetic pressure field are described. SH C A

**Magnetism Demonstrator.** EDMUND. Three circular magnets of varying diameter and thickness, plus a Kraft-board tube, are used to demonstrate attraction and repulsion, non-material force and other principles. JH SH.

**Molecular Weight of Oxygen** mp CORONET 11min col \$100 b&w \$50. A weighed sample of potassium chlorate is heated, the oxygen produced displaces water which is measured, the loss of weight of the potassium chlorate is determined and the molecular weight of the oxygen calculated. C SH

**Molecular Weight of Solutes** mp CORONET 8min col \$75 b&w \$37.50. Methods for the determination of molecular weights of non-volatile solutes. C SH

**The Naval Research Laboratory Reactor** mp UWF 21min col \$123.61. Construction, operation and use. SH C

**Neutrons and the Heart of Matter** mp ETS col \$210. Exploring the nature of matter and the significance of the neutron's behavior, with Dr. Donald J. Hughes of Brookhaven National Laboratories. JH SH

**Nitric Acid Compounds and the Nitrogen Cycle** mp CORONET 18½min col \$192.50 b&w \$150. Laboratory methods of nitrogen fixation, making nitric acid, and the Ostwald process by oxidizing ammonia. Various compounds and their uses—in gunpowder, photography, dyes, fertilizer. The nitrogen cycle in nature. SH

**Nitrogen and Ammonia** mp CORONET 16min col \$165 b&w \$90. Laboratory

production of ammonia demonstrated. Industrial preparation (Haber). Uses in explosives, refrigerants, cleaning agents, water purification, dry cells, dyes, fertilizers. Other nitrogen compounds. SH

**Nitrous Acid and Sodium Nitrite** mp CORONET 18½min col \$175 b&w \$87.50. A test to distinguish a nitrite from a nitrate. Sodium nitrite is prepared by reduction of sodium nitrate with lead and isolated. Chemical properties of nitrous acid as oxidizing and as reducing agent. C SH

**Oxides of Nitrogen** mp CORONET 18 min col \$150 b&w \$75. Physical and chemical properties of three oxides—nitrous oxide prepared from ammonium nitrate, nitric oxide prepared from dilute nitric acid and copper, and nitrogen dioxide prepared from nitric oxide and oxygen. C SH

**Periodic Table of the Elements** chart CENSCI 62x52", 4-color on heavy plastic coated stock, \$7.50, spring roller mounted \$12.50. Includes numbers of naturally occurring radioactive and stable isotopes, atomic numbers, weight, density, boiling and melting points, electronic configuration, half-life and other atomic constants. SH C

**Phosphorus** mp CORONET 18½min col \$175 b&w \$87.50. Physical and chemical properties of white and red phosphorus compared and contrasted. Calcium phosphide is treated with water and phosphine is prepared. The ammonium molybdate test for the phosphate ion. C SH

**Physical and Chemical Change** mp CORONET 28min col \$250 b&w \$125. Chemical reactions of direct union, displacement, decomposition, and double decomposition are shown. C SH

**Preparation and Properties of the Halogens** mp CORONET 32min col \$300 b&w \$150. Physical and chemical properties of chlorine, bromine and iodine, their relative activity equations. C SH

**Preparation and Properties of Hydrogen** mp CORONET 18½min col \$175 b&w \$87.50. Electrolysis of water; reactions of sodium and calcium with water, several metals with hydrochloric acid, and several acids with zinc. Construction of a hydrogen generator. C SH

**Preparation and Properties of Nitric Acid** mp CORONET 21min col \$200 b&w \$100. Preparation from sodium nitrate and sulfuric acid in a retort. Solutions of nitric acid in water; properties of various concentrations. Equations. C SH

**Principles of Ionization** mp CORONET 13½min col \$125 b&w \$62.50. Effects of different types of solute on the boiling point of water and on electrical conductivity. Ion migration during electrolysis demonstrated, using a mixture of copper sulfate and potassium dichromate. C SH

**Properties of Acids, Bases and Salts.** mp CORONET 28min col \$250 b&w \$125. Conventional properties and tests for solutions of acids and bases. Reactions demonstrated: calcium oxide and water, zinc oxide and water, sulfur dioxide and water formation of salts. C SH

**Properties of Solutions** mp CORONET 28min col \$250 b&w \$125. Nature of solutes and solvents, factors influencing solution, effect of temperature. Supersaturation; extraction. C SH

**Rate of Reaction** mp CORONET 28min col \$250 b&w \$125. Factors affecting reaction rate. Among the reactions demonstrated: potassium permanganate and glycerine; oxalic acid solutions and permanganate solutions at various temperatures. C SH

**Standard Solutions and Titration** mp CORONET 21min col \$200 b&w \$100. A sodium hydroxide solution is standardized against potassium hydrogen phthalate, and is used to determine the acetic acid concentration of a sample of white vinegar. The equivalent weight of an unknown acid is determined. C SH

## Classroom TV Troubles

Three RCA engineers have outlined some of the troublesome conditions confronting receivers intended for classroom use. In a paper before the SMPTE they pointed out that as compared with home receivers the classroom situation generally involves (a) more viewers per receiver, (b) greater viewing distances, (c) more ambient illumination, (d) greater ambient noise and inferior acoustical treatment. While projection receivers are capable of producing much larger pictures it is at such low brightness level that room darkening is required.

Portable school furniture was recommended so that up to 40 students may be grouped around a single 21-inch or 23-inch receiver within a maximum viewing distance of 20 feet and a maximum viewing angle of 90 degrees. Height from floor should range from 4½ feet for first graders to 7 feet for 12th-grade or college classrooms. A master antenna system was urged.

## Five for Family

Family Films received five of the 1960 awards by the National Evangelical Film Foundation for the best Christian audiovisuals. Three were for its feature film "Power of the Resurrection"—for best picture, best actor and best direction. Family's "Teenage Witness" was judged the best youth film, its "Geography of the Holy Land" the best single filmstrip.

## Victor Animatograph's 50!

The Victor Animatograph Corporation, now a division of Kalart, Plainville, Conn., devotes the current issue of its house organ, "News Reel," to the highlights of its 50 years of service to the audiovisual field. Included are a dozen photographs of early Victor models and a reproduction of its first advertisement of a 16mm camera and projector, August 12, 1923.

## Photo Show Discontinued

New York's annual National Photographic Show, the biggest consumer show of its kind, has been discontinued by its sponsor, the Photographic Manufacturers and Distributors Association. Wilfred L. Knighton, association secretary for the past 22 years, has resigned to give his attention to his own enterprises, among them the very successful and effective Photographic Credit Institute, Inc., which will continue to operate from PMDA quarters, 480 Lexington Ave., New York 17.

In coming to their decision, the directors found that although the show, accounted for the major revenues of the organization, it also took up a great deal of the time and effort of the staff. Net revenues have declined in recent years owing to mounting costs. Edward A. Donovan, assistant in the office, will carry on the association's work. Knighton's record of service to the photo field includes secretaryship for some years

## India Films for U. S.

The International Communications Foundation, a non-profit organization with headquarters in Beverly Hills Calif., has started production in India on audiovisual teaching materials for the U. S. Department of Health, Education and Welfare. These materials will include a motion picture and 40 sound filmstrips. They will be used by the University of California, Berkeley, for the development of a new college-level course on the Hindu-Urdu language and significant aspects of the culture of northern India, and when completed will be made available through ICF.

Lawrence Van Mourick, Jr., president of ICF, is in India heading a complete production staff which includes writers, still and motion picture photographers and technical consultants. He is assisted by Dr. John Gumpers, assistant professor of South Asian languages at the University of California, who is directing all linguistic aspects of work with the assistance of two Indian linguists.

Delegates to the National School Board Association convention in Chicago the latter part of April viewed the general meetings from more than a dozen different rooms and meeting halls. The means to this end was an elaborate closed circuit TV system which included three Dage television cameras placed strategically in the Conrad Hilton ballroom.

For more information on the materials in this issue, clip the coupons and send them to EDSCREEN & AVGUIDE, Readers' Service Dept., 2000 Lincoln Park West, Chicago 14, Illinois.

National Audiovisual Convention  
Chicago August 6-9

Annual Directory of Audiovisual  
Equipment and Services

# MONITOR—For Linguistic Excellence

## MONITOR FEATURES . . .

- SIMPLICITY OF OPERATION
- RELIABLE PERFORMANCE
- RUGGED CONSTRUCTION
- FUNCTIONAL FLEXIBILITY
- EXCLUSIVE, PATENTED DUAL-CHANNEL DESIGN

### INSTRUCTOR'S MONITORING CONSOLE

**1** MONITOR's standard Console gives the teacher control of the laboratory without requiring him to be an engineer or a switchboard operator. It can simultaneously conduct five separate course programs thus providing a variety of teaching materials to meet individual student needs. The console offers exclusive circuitry for private two-way communication, individual booth monitoring, program distribution to each booth or by rows and remote control of booth recorders for mass tape duplication.

### STUDENT UNIT—TYPE I

**2** Type I features the MONITOR E-3CS *patented* dual-channel recorder which enables students to listen to the master channel while simultaneously recording their own voices. Just two controls plus an on-off, volume switch assure simplicity of operation. Thus, students can perform operations by reflex action—and concentrate solely on the lesson material.

### STUDENT UNIT—TYPE II

**3** Type II includes a tube or transistorized amplifier and an activated headset-microphone. It enables each student to speak and listen to his voice simultaneously. It also provides for intercommunication between the student and teacher.

### Additional System Oriented MONITOR Equipment

MONITORET—A simplified version of the MONITOR E-3CS for home study with prerecorded tapes . . . REMOTESTER—Automates testing by stopping student tapes during questions and restarting them for recording answers only . . . AUDIO-VISUAL SYNCHRONIZER—Automatically coordinates visual presentations with prerecorded tapes or with the instructor's microphone.

Our rapidly expanding school population makes a teacher for each student an idealistic concept. Yet, educators agree there is an increasing need for teaching techniques that meet the varied capabilities of each student.

In the field of language teaching, the MONITOR Language Laboratory System offers the teacher the best means to achieve this objective. MONITOR today is the *only* language laboratory standard of the United States Government . . . the result of twelve years of product design and development. MONITOR is the product of first hand experience in installing, maintaining and directing hundreds of language laboratories in 51 countries.

To the student, MONITOR means more intensive learning through repetition, active use of new word sounds, and objective comparison of his own voice in playback.

To the teacher, MONITOR means the opportunity to meet student needs on an individual basis. As an easily operated and highly flexible teaching tool, MONITOR adds a new dimension, *tutorial supervision*, to the science of language teaching.

The coupon below is for your convenience in obtaining more information regarding a MONITOR Language Laboratory for your school . . .

**Be Sure...**

To keep for file purposes the Directory of Audiovisual Equipment and Services which begins on 444. A true 'one of a kind,' this listing of more than 600 manufacturers and suppliers for the AV field is probably one of the most complete, most practical and—to the AV specialist—most valuable ever compiled.

An exhaustive listing of AV equipment, supplies and services includes a cross-indexing of all companies and organizations supplying each item.

Take a look. Page 444.

# DON'T WORRY, HE WON'T GET IT OUT!

To remove a LEVOLOR bottom rail clip, one must know how. No amount of yanking and pulling on the tape can get them out. But to the maintenance man who knows how, it is as simple as A. B. C.

Information that insures the best installation possible is a service all LEVOLOR representatives will give you. They will submit a prospectus covering every detail of your Venetian Blind installation—help with the specifications and make a final inspection after the blinds are installed. It is a service that guarantees good specifications and good Venetian Blinds.

## Convention Keynote Theme: "The Challenge of the 60's"

The 1960 National Audio-Visual Convention in Chicago August 6-9 is expected to draw an attendance of 3,000 audiovisual specialists from the fields of education, religion, industry and business, according to Harvey W. Marks, general convention chairman.

A few of the highlights:

Keynoting the first general session will be a visual presentation entitled "The Challenge of the Sixties," prepared and presented by James W. Hulfish, Jr., NAVA Director of Information. The presentation will cover the development of the audiovisual industry to its present stature as well as a review of current trends and future prospects.

"Meet the Challenge!" is the title of an address to be made by Dr. G. Herbert True, nationally famous writer, psychologist and lecturer. The address will cover ways AV people may today gird themselves to meet the dramatic changes which will take place during this new decade.

In addition to the regular meetings of the NAVA board of directors and executive committee, there will be meetings of the NAVA Religious Council, Harvey Marks, chairman, and the NAVA Industry and Business Council, Robert Abrams, chairman. The NAVA Canadian members meeting will feature an informal breakfast, and the board of governors of the Na-

Dr. G. Herbert True

tional Institute for Audio-Visual Selling will hold a luncheon. Other NAVA groups meeting include the Association's educational committee, the religious dealers, the NAVA past presidents, and the western AV dealers.

## Harvey Marks Nominated As Next NAVA President

The election of new officers of the National Audio-Visual Association for 1960-61 will take place during the convention. Announcement will be made of the result of a mail ballot circulated previously to the association membership.

Dr. Richard B. Lewis, left, and Herrold E. Kemp will be part of a team from San Jose State College presenting "Selling to Industry" at the convention. W. G. Kirtley, NAVA president, says, "This presentation promises a practical and interesting analysis of AV utilization in industry."

## Cover Scene

Night views of Chicago are not uncommon, but this one shows an especially attractive range of lights and towers in 'the big city at night.' Traffic on Lake Shore Drive at left, with the Wrigley building shimmering in white in the distance.

Photographer: Hedrich-Blessing, Chicago.

Nominated are the following:

President: Harvey W. Marks, Visual Aid Center, Denver, Colorado; first vice-president: Mahlon Martin, M. H. Martin Co., Massillon, Ohio; J. Howard Orth, Midwest Visual Education Service, Des Moines, Iowa. Second vice president: Harold A. Fischer, Photosound of Orlando, Orlando, Florida; M. G. Gregory, Sound Photo Sales Co., Lubbock, Texas.

Secretary: Robert P. Abrams, Williams, Brown & Earle, Philadelphia, Pennsylvania; Peter Allinger, View-sound Supplies, Vancouver, B. C., Canada. Treasurer: Earl Harpster, Harpster Audio-Visual Equipment, Inc., Cleveland, Ohio; Mrs. Ruth B. Walsh, Hartley's Motion Picture Division, Bethlehem, Pennsylvania.

Directors-at Large: Mrs. Eloise Kcefe, T.E.A. Film Library, Dallas, Texas; Paul Cox, Coast Visual Education Co., Hollywood, California; R. Kenneth Cromar, Audio-Visual Center, Denver, Colorado; Joseph Meidt, Cousino Electronics Corporation, Toledo, Ohio.

Middle Atlantic Regional Director: Charles F. Appel, Appel Visual Service, Inc., Pittsburgh, Pennsylvania; Murray O. Cunningham, E. J. Barnes Co., Inc., New York, N. Y.; Rutherford K. Clarke, The Rud Clarke Co., DeWitt, N. Y. Midwestern Regional Director: Stephen J. Bartha, Bartha Visual Education Service, Columbus, Ohio; E. C. Carlton, Carlton Films, Beloit, Wisconsin; R. V. Reed, Reed Audio-Visual Company, Webster Groves, Missouri.

Southwestern Regional Director: Hilton McCrory, Stanley Projection Co., Alexandria, Louisiana; M. W. Huseman, South Texas Visual, Inc., Corpus Christi, Texas; I. L. Miller, Jr., Miller's Visual Aids, Inc., Ft. Worth, Texas. Canadian Regional Director: George Gibson, Toronto Camera Ex-

# Is he learning...

*or just being entertained?*

*He's learning...if* the classroom audio-visual equipment is designed, as only Bell & Howell equipment is, to be an active educational aid rather than a medium of entertainment. The full benefits of teaching with audio-visuals can be achieved only through built-in features and controls that make the teacher the *complete master* of the lesson rather than a bystander. Only Bell & Howell gives these to you, along with unmatched ease of operation.

The school administrator gets the assurance of long, trouble-free equipment operation, and the certainty that the school has

gotten the best value for its money. Program assistance and service is provided by an expert Bell & Howell Audio-Visual Representative in your area.

If you're going to specify audio-visual equipment soon... if you're interested in the added teaching power audio-visuals can give your school... write us today. There's no obligation. Education Dept., Bell & Howell, 7117 McCormick Rd., Chicago.

Qualifies for purchase under  
Public Law 864. (National  
Defense Education Act).

399AV. Stops on single scene for class discussion. Reverses instantly, lets you repeat scenes until they are clearly understood.

Filmosound 302. Add high-fidelity magnetic sound to any 16mm film, automatically. Doubles the value of language teaching film.

786AV-1. 2-Channel Tape Recorder. Teacher records lesson on one channel. Student listens, records answers on second channel.

724 Slide and Filmstrip Projector. Simple instructions on projector. Projects even in semi-lighted room to permit note-taking.

### Many Langlab Manufacturers To Exhibit at Convention

There will be close to 30 different displays of language laboratory equipment, accessories and materials at the 1960 National Audio-Visual Convention and Exhibit. Firms planning to

exhibit language lab equipment and accessories include Advance Furnace Company, American Gelson Electronics, Inc., Audio Teaching Center and Films for Education, Audiometrics Corporation, Chester Research and Development Corporation, Cousino Electronics Corporation.

Also Educational Equipment Division, Edwards Company, Inc., Fleetwood Furniture Company, Hamilton Electronics Corporation, Instructomatic, Inc., International Film Bureau, Inc., Jentzen-Miller Company, Magnetic Recording Industries, Mobile-Tronics, Monitor Language Labora-

### Calendar

August 3-4 — NAVA Entertainment Film Meeting, Highland Park, Ill.  
August 6-9 — National Audio-Visual Convention, Chicago.

August 17-23—International Religious Executive Consultation, Boulder, Color.

August 23-26 — Annual meeting, Biological Photographic Association, Salt Lake City.

August 31-September 11 North American International Photographic Exhibit.

September 28-30—Illinois Audiovisual Education Association, Aurora, Ill.

October 14-17—National Association of Public School Adult Educator—Adult Education Association, Denver.

October 28-29—Southern Section Conference, Audio-Visual Education Association of California, Pasadena.

tories, Neumade Products Corporation.

Also Pentron Sales Co., Inc., Radio Corporation of America, Robert H. Redfield, Inc., Rheem Califone Corporation, Viking of Minneapolis, Inc., V-M Corporation, Webcor, Inc., and Webster Electric Company.

### Other Groups Gathering For Meetings During Convention

A special meeting of educational audiovisual directors will be held in connection with the convention, according to an announcement by Illinois University. The one-day meeting, which is being sponsored by IAVA, will be held Saturday, August 6, at the Morrison Hotel. Several other state associations have been invited to co-sponsor the event which will be open to educational AV directors throughout the Nation.

Other organizations meeting during the 1960 convention dates will be: AV Workshop for Industrial Training Directors, Industrial Audio-Visual Association (Midwestern Region), AV Conference of Medical and Allied Sciences, Department of Audio-Visual Instruction (NEA) executive committee and board of directors.

### Two AV Books Available

Educational Screen has a limited supply of two volumes, *Picture Values in Educational and Comparative Effectiveness of Some Visual Aids in Seventh Grade Instruction*, both by Joseph J. Weber. One or both are available upon written request at a cost of one dollar each to cover postage and handling.

**Rugged construction plus ease of handling equals...**

Everyone working with audio-visual equipment knows that your best buy is *the best you can buy!* In the case of projection screens, that's Da-Lite... a full line of wall-type and tripod models with exclusive features developed over the past 50 years by men who specialize in improved picture projection. See the all-new Da-Lite Jr. Electro—the finest electrically-operated medium-sized wall screen ever produced. Your Da-Lite A-V dealer will gladly demonstrate!

An  
Open  
Mind,  
Man!

*Paul C. Reed*

You can't be for or against a hammer. You can't be in favor of a saw or not in favor of it. These are tools, man! These are tools for doing a job. The only legitimate questions you can ask about a hammer are those related to its use. Can you use it to do the job that has to be done? Who should use it? How can he learn to use it better? How can you make a better hammer? One that's easier to use or one that will work better? Can you use it more effectively if you use it in combination with other tools?

It's the same thing with equipment and developments in the audiovisual field, man. These are tools and ideas for doing a job. How can you be for or against such communications tools as a projector, a tape recorder, a television receiver. They're tools. You can't be for or against them. The only legitimate questions are those related to what you use these tools for and how you can use them to accomplish the most.

With brand new tools or improvements on the old ones, you've got to keep an open mind, and use your imagination. That's hard to do, man. It's much easier to say "the way we're doing it already is better." "We tried it once and it doesn't work." "It's too small, too big, too complicated, too something else."

Take 8mm sound on film, for instance. Here's a new communications tool. A real audiovisual challenge for the Sixties. What are people saying about it? What do you think? Have you seen and heard it? Is the picture too small? For what group? Where? What *about* the sound? Are the educational film producers going to make 8mm sound films available? Do you know what the 35mm advocates said about 16 back in the Twenties? How are you going to find your answers? Or is your mind already made up!

But 8 mm sound film is just one of the new developments providing audiovisual challenge for the Sixties. There are learning machines, called "teaching machines" if you prefer. New and improved and varied adaptations of recording and language laboratory equipment. There is the challenge of the video tape recorder. Various combinations of multiple purpose equipment in single units for more efficient operation. Systems approaches to instructional problems.

All of these new tools and new ideas have got to be faced with an open mind if we are going to even begin to meet the challenge of the Sixties. Not only the new equipment ideas already here and on display at the 1960 NAVA exhibit, but the increasing number of new developments that will be on display each succeeding year of the Sixties.

NAVA time in the summer time at Chicago is an exciting time. It's a challenging time. Especially in 1960. It's a time for exposing new products and expounding new ideas. It's a time for open minds and for imaginations to soar, man!

Advance announcements have promised the greatest opportunities ever at the 1960 National Audiovisual Convention and Exhibit for everyone in the audiovisual field. A wide variety of meetings, the most and most interesting exhibits, and the best time for everyone. We hope we'll be seeing you there.

**Kodak**  
TRADEMARK

*At the new Kaibab Elementary School, Scottsdale, Arizona, selected by A.A.S.A. for its exhibit of outstanding school designs, Mr. Marvin Osborn, Audio-Visual Director says:*

**“In operation 75% of the school day, these Kodak Pageant Projectors just keep running...without fail!”**

“Once-a-year checkups seem to be all they need to keep them operating the way we like, with no breakdowns, no disruptions of classroom order.

“Projection Club, 6th, 7th and 8th grade students handle showings. They catch on fast to the Pageant’s simple operation.”

Stresses on audio-visual equipment are extraordinary, even in normal use. Constant usage, hard usage, and usage by many different people mean that projection equipment must be built specifically for Audio-

Visual work, if it is to endure.

That’s the way we have constructed Kodak Pageant Projectors. First, to be sturdy . . . with quality sound and screen image for all types of A-V usage. Then, to be simply operated . . . even by children. Finally, to be easily maintained . . . with only occasional checkup.

*Kodak Pageant Projectors are sold through Kodak Audio-Visual dealers, who will demonstrate at your convenience. Or, you can write for Bulletin V3-22; no obligation, of course.*

*Kodak Pageant Projector* } **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

## National Audiovisual Convention and Exhibit

# National Audio-Visual Association

### *Program*

#### Saturday, August 6

- 8 a. m. Breakfast in the Terrace Casino. Entertainment program under the direction of Martin S. Mendro. Midwest Visual Equipment Co., Chicago, Ill., featuring the Mid-States Four.
- 9 a. m. First General Session: The Terrace Casino. Presiding: Harvey W. Marks, Denver, Colo., General Chairman of the Convention.
- 9:05 a. m. Keynote Presentation: "The Challenge of the Sixties." An audiovisual presentation to be prepared and presented by

James W. Hulfish, NAVA Director of Information.

- 9:45 a. m. "Selling to Industry." A practical and interesting analysis of the various uses of AV devices, demonstrated in rapid-fire manner by a top team: Dr. Richard B. Lewis, Tom Clemens and Jerry Kemp, of the AV Center, San Jose State College, San Jose, Calif.
- 10:45 a. m. First General Session ends.
- 11 a. m. to NAVA Ladies' Sherry Party and 1 p. m. Open time.
- 2 p. m. NAVA Board of Directors meets.
- 1 to 6 p. m. National Audio-Visual Exhibit open: Mezzanine, 1st & 3rd floors.

NAVA officers for the 1959-60 term: from left: Robert P. Abrams, Williams, Brown & Carle, Philadelphia, treasurer; Mahlon Martin, M. H. Martin Co., Massillon, Ohio, second vice president; W. G. Kirtley, D. T. Davies Co., Louisville, Ky., president; Harold A. Fischer, Photo-Sound of Orlando, Fla., secretary; Harvey W. Marks, Visual Aid Center, Denver, first vice president.

8:30 p. m. Annual NAVA Dance Party: Terrace Casino.

### Sunday, August 7

- a. m. Religious Council Meeting.
- a. m. Canadian Members' Breakfast.
- 9:30 a. m. NAVA Educational Committee Meeting.
- 11 a. m. Audio-Visual Worship Service: The Terrace Casino. Conducted by Rev. Paul Kiehl, Church-Craft Pictures, Inc., St. Louis, Mo.
- 12 to 6 p. m. National Audio-Visual Exhibit open: Mezzanine, 1st & 3rd floors.
- 12:30 p. m. Luncheon for NAVA Institute Board of Governors.
- p. m. Industry and Business Council Meeting.
- 8:30 p. m. NAVA Religious Dealers Meeting.

### Monday, August 8

- a. m. Breakfast in The Terrace Casino. Entertainment program under the direction of Martin S. Mendro, featuring the NAVA Orchestra.
- a. m. Second General Session: The Terrace Casino. Presiding: W. G. Kirtley, Louisville,

Ky., President of the National Audio-Visual Association.

- 9 a. m. Annual Business Meeting of the National Audio-Visual Association.
- 9:30 a. m. Address: "Meet the Challenge!" By Dr. G. Herbert True, nationally famous writer, psychologist and lecturer of 1255 E. Madison St., South Bend 17, Ind.
- 10:30 a. m. Second General Session ends.
- 12 to 6 p. m. National Audio-Visual Exhibit open: Mezzanine, 1st & 3rd floors.
- 12:30 p. m. NAVA Luncheon for Past Presidents.
- 5:30 p. m. Hotel Morrison Reception for all Convention registrants: The Terrace Casino.
- 8 p. m. Special screening of outstanding films on sales, business management and similar topics: The Terrace Casino. In Charge: Keith Smith, Modern Sound Pictures, Inc., Omaha, Neb.

### Tuesday, August 9

- 8 a. m. Western A-V Dealers Breakfast.
- 9 a. m. to National Audio-Visual Exhibit
- 1 p. m. open: Mezzanine, 1st & 3rd floors.
- 1 to 5 p. m. NAVA Board of Directors meets.

## "...The Challenge of the Sixties"

by W. G. "Bill" Kirtley  
President  
National Audio-Visual Association

Pause a moment. Think back over the dramatic changes which have taken place in the AV world during the past ten years. You will begin to appreciate the scope of the challenge before us, this "Challenge of the Sixties." It is inevitable that by 1970 we will have progressed as far beyond 1960 as we have today passed beyond the AV industry of 1950. In fact, this progress is certain to be much greater because it is constantly accelerating. The prospect propels the imagination!

Yet, because our youthful industry, strongly sensing its own impending accomplishment, has remained steeped in today while keeping a steady eye on tomorrow—because we have been tightly concerned with the past recognizing that our ultimate promise of maturity rests with the future—perhaps we are not fully aware of just how far we have come in a brief decade. Breakthroughs are rarely recognized as such at the time they occur. Only in retrospect does their full significance dawn. Therefore, in anticipating the promise of the Sixties, it is appropriate to recall some of the advancements which set apart the "Fabulous Fifties" as a crucial decade in AV history.

For instance, ten years ago filmstrip sales in the United States were, comparatively speaking, negligible. Few then could possibly have imagined the extent to which they would be used by 1960. But the development of filmstrip projectors which were simpler, easier to use, and less expensive made the use of filmstrips as an instructional aid vastly more desirable. In addition the development of the fully automatic filmstrip projector, and later the sound slide film projector, contributed heavily to the market expansion of this item. Today filmstrips are among the most frequently sought of audiovisual aids.

When the Fifties began, the opaque projector was in limited use. Not until the light output was greatly increased did interest begin to approach today's proportions. Now the opaque projector is an AV staple.

Introduced during the period were 16mm film projectors with magnetic sound. With this significant advance it became easier for the talented, creative instructor to produce his own sound motion pictures tailored to his special needs. Local production took a giant stride forward.

Coinciding with the automation of filmstrip projection came similar advancements in slide and transparency units. An outgrowth of the fully automatic slide projector and the synchronized sound slide projector was the repetitive projector with its enormous implications for creating AV markets in sales and merchandising. The role of

W. G. Kirtley

the slide projector expanded to include the exhibit hall, display window, and showroom floor in addition to the lecture room.

Another now-familiar audiovisual item which really came into its own only during the past decade is the overhead projector. Of minor importance before 1950, the overhead's special characteristics—use of overlays, ability to work right on the projected transparency—were finally discovered by alert AV users. Making their contribution to full acceptance of the overhead were a variety of new transparency-making devices and systems, simplifying local materials production and lowering costs. Today, overheads are rightfully in great demand and sales of local production equipment and materials are steadily growing.

AV advances were not restricted to visuals. Remarkable improvements were made in the fidelity of record and transcription players, so much so, actually, that the description "high fidelity" lost all meaning in defining sound quality. Stereophonic sound became a major feature of both record players and tape recorders lending greater flexibility to aural presentations of all kinds. Today recorded sounds may be reproduced with the full brilliance of the original source.

But product development is only half the story. Industry progress results from a combination of product development *and* market acceptance. For without a fundamental change in the viewpoint of AV users and potential users, it would have been impossible to have realized gains made during the Fifties. Take three relatively recent AV entries as an illustration:

In 1950, if you broached the subject of educational TV your listener probably suggested that you "come back down to earth." At a reference to language laboratories he would pronounce, with little fear of contradiction, "impractical." And if you were caught musing about teaching machines, your eavesdropper would likely have

wondered what you planned to teach them. In fairness, it must be admitted that these items—educational TV, language labs, teaching machines—were largely unfamiliar within our own industry ten years ago. It is not surprising that to "the man in the street" they were just so much gobbledygook. But today he is informed and enthusiastic.

What about AV and "the man in the street?" A scant decade ago he would have declared himself of the opinion that audiovisuals were gimmicks, that their chief value was in their novelty. However unjust such a conviction may have been then is irrelevant, because today even our "man in the street" is becoming convinced of the value of AV aids. He is beginning to demand audiovisuals for his schools, is impressed with the better education they make possible for his children. He is personally growing acquainted with audiovisuals through their extensive use at his church, appreciates the way they have contributed to his own religious understanding. Finally, he is obtaining audiovisual equipment to help him in his own business, and can point to cold statistics to prove that they are improving sale and cutting training costs.

In short, the audiovisual industry began to come of age in the Fifties. It improved its products, coupling this advance with an upgrading of its services, and the market responded with soaring interest. In the wake of this, spectacular things began to happen.

General school construction began to include provision for audiovisual instructional materials and equipment. Architects began to reappraise school design with AV utilization in mind, and this in turn was in response to a new demand by school administrators for these AV facilities. Colleges of education greatly increased their programs to train teachers in the use of audiovisual aids. Congress appropriated funds for AV purchases. With, perhaps, less fanfare, corresponding increases in AV interest began to take place among religious and industrial users.

Most significant of all is the fact that the young people of today are being constantly exposed to audiovisuals in their schools and at their churches. If we do our job right, they will grow into adults pre-sold on the value of audiovisuals to communication.

In the final year of the Fifties an estimated \$287 million was spent for AV products—easily twice the amount spent in 1950. In a single decade our industry had doubled! Yet some responsible business leaders have predicted that the industry will double again in the next *two* years. Who then would be so bold as to hazard a forecast of the AV picture for 1970?

"The Challenge of the Sixties" is the many new things it will bring, the varied problems which will arise and be overcome, the new friends AV will win. The future will see materials of every type, more readily available to more people, on every subject under the sun. Equipment will be more streamlined, simpler to operate, easier to transport, and a cinch to service. There are many promising areas of advancement. But most exciting of all is the certainty that by 1970 we will be using wonderful, yet un-dreamed of audiovisuals.

# Audiovisual Education Forum

## Program

### Saturday, August 6

9:00 a.m. Registration.

Fee—\$3—covers three days or any part thereof, screenings, forum, trade show, NAVA dance party  
9:30 - noon Saturday night and Morrison Hotel  
2 - 5 p.m. party Monday afternoon. Screenings and discussion of "Blue Ribbon" winning films at the American Film Festival, conducted in New York City by the Educational Film Library Association. 'Pro' and 'con' critics, designated from the audience prior to each screening, will lead a discussion period following each film. Moderators: Richard Edmundson, director of AV training, Illinois Public Aid Committee; Reynolds Hungerford, visual instruction division, Chicago Public Schools.

Among these "best of show" films:

- World in a Marsh* (Natural Resources) NFBC-McGraw Hill.
- The Changing Voice* (Arts, Crafts, Household Arts) Florida State University.
- The New Girl* (Government) President's Committee on Government Contracts.
- Eternal Children* (Child Development) NFBC-International Film Bureau.
- The Middle East* (Geography) International Film Foundation.
- I Am A Doctor* (Guidance) Sterling Movies.
- Women on the March* (History) National Film Board of Canada.
- Overture and Power Among Men* (Foreign Affairs) United Nations—Contemporary Films.
- The Poisoned Kingdom* (Literature) Encyclopaedia Britannica Films.
- Between the Tides* (Nature and Wildlife) Contemporary Films.
- Rockets: Principles and Safety* (Elem-JH) Film Associates of California.
- A Conversation with Dr. Harlow Shapley* (NBC TV-EBF).
- Crystals* (SH-College) Physical Science Study Committee—Modern Talking Pictures, Inc.
- The Old Order Amish* (Sociology) Vedo Films.
- Navajo Silversmith* (Social Studies) ACI Productions.
- The Living Stone* (Graphic Arts) NFBC.
- The Red Balloon* (Children) Brandon Films.
- A Portrait of Hector* (Ethics) The Methodist Church.
- An American Museum* (Public Relations) City Art Museum, St. Louis.
- Second Chance* (Health) American Heart Association.

*There Was a Door* (Mental Health) Contemporary Films.

9:30 p.m. NAVA Dance Party—Terrace Casino, Morrison Hotel. Your badge admits you.

### Sunday, August 7

11:00 a.m. Non - denominational Audiovisual Church Service

1:00 p.m. Tour of NAVA Exhibits

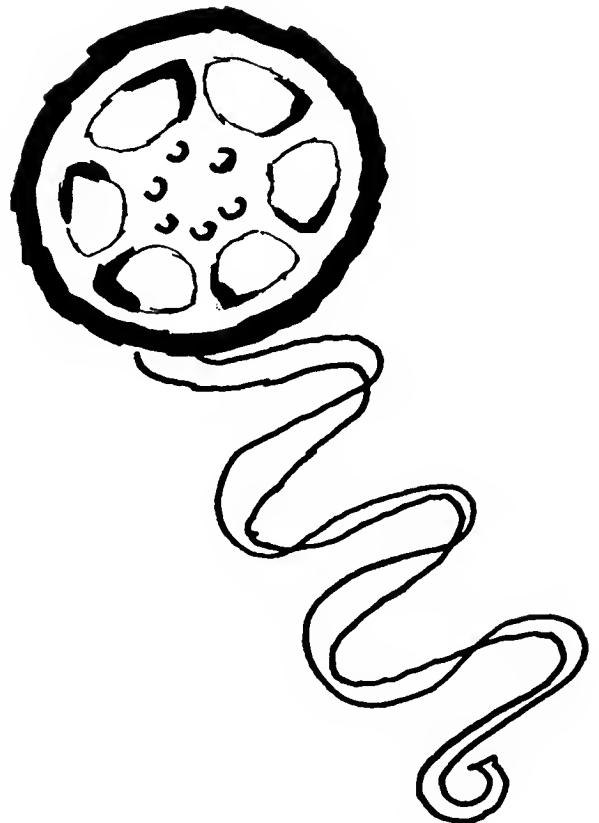

### Monday, August 8

9:00 a.m. "Town Hall" Forum on some of AV's to noon "hot potato" topics. "Teaching" Machines—programs—audio-visuals? Experience reports on National Defense Education Act. Technological progress? The 1960 NAVA Exhibits? Does current math-science stress de-emphasize the Humanities?

2 - 5 p.m. Do teachers know how to use audio-visuals? If not, whose fault? Airborne TV? Questions, anyone? What's doing in our present CCTV installations? Where does A/V fit into the school library set-up—or is it vice versa?

Moderators: Wm. F. Kruse, Educational Screen & Audiovisual Guide; Verne Stockman, Eastern Illinois University, president, Illinois Audio-Visual Education Association

(see following page)

# “...a bridge linking AV user and maker”

by Verne Stockman  
President  
Illinois Audiovisual Education Association

Although a newcomer among the professional groups meeting at Chicago this year, the Audiovisual Education Forum really has a substantial background as well as a unique and important role. It represents in one sense a revival of the Midwest Forum on Audiovisual Education which approximately twenty years ago served as a vehicle for close cooperation between the then users of AV materials and techniques and the commercial and manufacturing people who developed those materials and stimulated their use.

The need for this close relationship is at least as great today, and though it is fostered on the national level by DAVI, there remains a need for educational emphasis at the annual Chicago audiovisual complex, along with that on industry, agriculture, medical and allied sciences, religion and kindred applications of the medium.

In past years the meetings of the Educational Film Library Association provided this educational facet to a considerable degree, but since EFLA's discontinuance of its Chicago summer meeting a need exists for some other organized means to assure this interchange of thought and experience between AV-using schoolmen and the industry that serves them.

The NAVA exhibits represent an educational opportunity unequalled anywhere in the world for any AV professional to update his knowledge of the technological and ideological advance in his chosen field and of the lines along which progress is to be anticipated. To end this opportunity would represent an irreparable loss.

Another compelling reason why the Illinois Audiovisual Education Association considers preservation of this contact imperative is audiovisual's own "expanding universe" of new techniques and resources, new recognition and responsibilities, and new questions—with some answers supposedly found and many admittedly still to be sought. Productive as are our professional national, state and local gatherings they tend to cover so much territory, and generally in so impressively an organized manner, that there is too little chance or inclination for free and frank informal nonconformism.

At Chicago last year the Illinois Audiovisual Education Association joined with the Chicago Film Council in sponsoring an 11th hour traditional EFLA-type film screening program. The response was such that our annual fall meeting authorized an expansion of this participation. In response to spontaneous encouragement from AV workers in nearby states our spring meeting voted to invite co-sponsorship from DAVI affili-

ates in adjoining states. At this writing acceptances have been received from Minnesota and Michigan and others will likely be added.

We are all *thinking* about these new challenges, new techniques, new devices and materials. We need a chance to compare, contradict, collate. This Audiovisual Education Forum represents such a chance. If it works out as we hope it should become an annual event to which all dedicated workers in this field, whether in school, commerce, industry, government, science or civic affairs will look forward, a place where they will bring their ideas and experiences, their hopes and their misgivings, to meet with and on occasion clash with those of their peers.

The subjects suggested for discussion are designedly those on which the last word has not yet been spoken. A discussion technique is proposed that is a departure from customary "presentation" procedure (panelled or unpanelled). Instead a procedure is suggested that might be described as a "Great Books" graft on the Town Meeting tree, with an added touch of the film critique format of the UFPA. The "program" consists largely of a list of discussion topics. Time permitting, others may be added from the floor. Two spokesmen are to be designated for each topic, pro and con, a missionary and a gadfly. They, plus a moderator, will fence the topic's field and outline their idea of ground rules. Those desiring to speak will make this known in advance in order to allot time to advantage, but with a generous provision, we hope, for rebuttal and hindsight.

Ours is a three-day program. Saturday will be given over largely to critical screening of new materials. Here, too, pro and con evaluators will be designated in the manner UFPA has found so rewarding—and exciting. Sunday allows for an AV worship service and all afternoon at the exhibits. Monday is "town meeting" day, with time out for further exhibit viewing if the group so decides, and in any event a report-back session on this year's exhibits for discussion on what is, will be and perhaps ought to be.

Because this is a new approach we have no way of knowing our personnel resources in advance of the meeting. So any reader who plans to be in Chicago August 6-8 and wants to attend is urged to drop a note right away to one of our co-chairmen, Bill Kruse, *Educational Screen and Audiovisual Guide*, 2052 N. Lincoln Park West, Chicago 14, Illinois. (Reynolds Hungerford, Chicago Public Schools, is the other). Besides our excellent Illinois and Chicago local talent, the nationally prominent AV pros heard from to date include Lee Cochran, Neville Pearson, Ford Lemmler, Phil Lewis, Ralph Creer, James Boula, L. D. Miller, Charles Miller, John Hedges, Robert C. Snider, Mickey Bloodworth, Robert A. Bauman, James Fitzwater, Herb Jackman, Paul C. Reed, Seerley Reid and Paul Wendt. A lively and productive time is in prospect.

# Audiovisual Conference of Medical and Allied Sciences

## *Program*

### **Monday, August 8**

- 8:45 a. m. Registration  
9:00 — 1959-60 In Review—Exchange of information: five-minute comments on highlights in AV programs of participating organizations  
10:30 a. m. Coffee break  
10:45 a. m. Report of executive committee  
11:00 a. m. The Bio-medical Communication Specialist: Seymour Friedberg, Production Supervisor of AV Center, Indiana University  
11:45 a. m. The NAVA exhibits—Commentators: Robert Getty DVM, Professor and Head, Veterinary Anatomy, Iowa State College; John Franklin Huber, M.D., Professor

and Head, Department of Anatomy, Temple University

- 12:00 - 2:00 p. m. Lunch and NAVA exhibits  
2:00 p. m. Principles in Group Dynamics: Dorothy Stock, Ph.D., Assistant Professor of Psychology, University of Chicago  
3:00 p. m. Coffee break  
3:15 p. m. Meetings That Bring Results: Allen K. Heydrich, Director of Education and Training, Link-Belt Company, Chicago  
4:30 p. m. On Winning Cooperation: Panel: J. Edwin Foster, Ph.D., American Heart Association; Herbert Jackman, American Dental Association; James Rothenberger, American Medical Association; Kathryn Linden, ANA-NLN Film Service  
6:00 p. m. Dinner  
8:00 p. m. General discussion  
9:00 p. m. Business meeting  
9:30 p. m. Election of officers

## “... steady growth of AV programs”

by Kathryn Linden  
Chairman, AV Conference of  
Medical and Allied Sciences

The Audiovisual Conference of Medical and Allied Sciences, held annually under auspices of NAVA, was organized in 1953 to further audiovisual education in these areas and to keep the member organizations informed of new developments. Toward this end, annual meetings are held which feature an exchange of information among the members, and workshops on signal advances in the field.

The results of these annual meetings have been electrifying. Progress reports by one organization have frequently led to similar experiments in other professions. The free exchange of ideas, and the open discussion of mutual problems have proven both helpful and stimulating. It may be said that, over the years, the annual reports have reflected a steady growth of the AV programs in all the sciences represented.

Special workshops of the conference have dealt with national and international distribution problems, methods of film evaluation and film programming, utilization of the various AV media, bottlenecks and how these can be broken, educational television, planning and production of professional films, principles in education.

Prominent guest speakers have come from uni-

versities and industry. They have included educators and psychologists, film producers and potential sponsors. Among them have been Richard S. Angell of the Library of Congress; L. C. Larsen, director of the Audio-Visual Center, Indiana University; Glenn E. Mills, director of visual education at the University of Colorado School of Medicine; Dr. Robert C. Snider, director of the AV Center of the University of Chicago; Peter Hickman, former director of the Smith Kline & French medical library; and Warren Sturgis of Sturgis-Grant Film Productions. Last but not least, special sessions of the conference have been presented by its members.

In response to repeated requests from producers and AV directors of other organizations, the afternoon sessions of the conference have been opened to the public since 1959. This year the workshops will explore the 2-way theme of cooperation. Dorothy Stock, Ph.D., assistant professor of psychology at the University of Chicago, will speak on *Principles in Group Dynamics*. Allen K. Heydrich, director of education and training at the Link-Belt Company, Chicago, and a frequent speaker for the American Management Association, will discuss *Meetings That Bring Results*. In closing, there will be a panel presentation on *Winning Cooperation*, in which the following will take part: Dr. J. Edwin Foster, director of AV education, American Heart Association; Herbert Jackman, director, Bureau of AV Services, American Dental Association; James

Panel at Film Forum of recent American Nurses' Association convention: from left, Hildegard E. Peplau, director of graduate program in advanced psychiatric nursing, College of Nursing, Rutgers University; Dr. Bryce Ryan, chairman of department of Sociology and Anthropology, University of Miami; Mrs. Frances G. Brown, director of nursing education, Oregon State Hospital; Nina Bethea Craft, nursing consultant, Rosemead, Calif.

Rothenberger, assistant director, Department of Motion Pictures and Medical Television, American Medical Association; and Kathryn Linden, director, American Nurses' Association—National League for Nursing Film Service.

The AV activity of conference members is reflected in highlights from their reports. The American Medical Association, American College of Surgeons, and American Hospital Association co-sponsored with Johnson & Johnson production of such films as *Hospital Sepsis* which won a 1960 American Film Festival Award (Churchill-Wexler Film Productions.) The American Nurses' Association—National League for Nursing co-sponsored with the Smith Kline & French mental health education unit the film *Psychiatric Nursing*, a 1959 Academy Award nominee and winner of the Chris Award (Dynamic Films).

With the increasing use of educational films

in the medical and allied sciences, distribution has in some instances reached remarkable proportions. The American Medical Association, for example, reports over 6,000 bookings a year, and both the AMA and the nursing organizations have shown annually a 600-booking increase over previous years. The American Dental Association, with over 3,000 bookings a year, reported an increase of 21 percent in their distribution for 1959.

Films have been used also at convention film programs. The American College of Surgeons for years has conducted cine-clinics in which surgeons discuss their filmed operations. The AMA runs 3 theaters concurrently during their conventions. Ralph Creer, AMA director of medical motion pictures and television, has been invited to plan and conduct international medical film programs in Europe and Asia. The American Nurses Association and National League for Nursing conduct theme film sessions throughout their conventions, with an average attendance of 800 to 1,000—and as high as 1,500—at film forums.

Increasing AV activities have been evident in the programs of other members of the conference also, which include representatives from the national associations of veterinary medicine, podiatry, colleges of pharmacy, dental schools, osteopaths, anatomists and bacteriologists.

Membership in the AV Conference is open to national non-profit and non-governmental associations or groups devoting resources to AV materials and programming in the medical and allied fields. Two representatives from each participating organization are invited to the annual conference. As mentioned earlier, the afternoon sessions beginning at 2 p.m. are open to the public.

Officers of the 1960 Conference are Kathryn Linden, director, American Nurses' Association and National League for Nursing Film Service, chairman; Herbert Jackman, director, Bureau of Audiovisual Service, American Dental Association, vice chairman; and Dr. Marvin W. Shapiro, president, American Podiatry Association, secretary.

This year's conference will be held on Monday, August 8th, at the Morrison Hotel, Parlor F.

## Illinois Training Directors' Association Audio-Visual Workshop

### *Program*

#### **Monday, August 8**

9:00 a.m. Welcome to Workshop — I.T.D.A. president, G. W. Plank, Caterpillar Tractor Company

9:15 a.m. "The Range of Experience"—Gerald Young, Partner, Kottcamp and Young. Examples and demonstrations of new, exciting audiovisuals and some of the old standbys

10:15 a.m. "What Every Young Man Should Know . . ."—E. L. Hirsch, Chicago Transit Authority. The "production" of a short training program during the Workshop hours

0:45 a.m. Coffee Break—Enjoy coffee and rolls and watch artists preparing materials for "What Every Young Man Should Know"

11:15 a.m. "It All Depends on You"—Gordon S. Sargent, Spiegel, Inc. Presentation of a sound-slide film currently being used at

Spiegels. Mr. Sargent will explain the reasons behind the development of this specific program

12:00 noon Showing of "What Every Young Man Should Know . . ."

12:30 p.m. Visit audiovisual exhibits

## "... to supply best possible training"

by Eliot L. Hirsch

Secretary

Illinois Training Directors' Assn.

Throughout the years, personnel in industrial training and personnel in the audiovisual field have had much in common. One group is ever dependent on the other and both have the same objective: to supply the best possible training to our fast-moving industry where yesterday's ideas become realities today and obsolete tomorrow.

Without practical and effective training, industry would find it necessary to shorten its stride. Without the versatility and wide range of audiovisuals, training would be long, dull and ineffectual.

Illinois Training Directors' Association is privileged to be part of NAVA's annual convention. For the past five years, our annual Audiovisual Workshop has offered our members and friends an opportunity to exchange ideas with the AV people. It has been the means whereby the training man can see everything that's new and important in the AV field. This, our sixth annual workshop, again offers these same advantages.

Each year our workshop has drawn AV people as well as training people. Here the AV man can get a better understanding of how training people use their products; what they think of their products; and, perhaps, what additional AV needs they have.

Again, this year, I.T.D.A. extends a cordial invitation to everyone—training and AV people

alike—to attend our AV Workshop on Monday, August 8, 1960, 9:00 a.m. to 12:15 p.m., in the Venetian Room, 2nd Floor, Morrison Hotel.

This year's workshop theme is "Making Your A-V I.Q. Pay Off." A panel of I.T.D.A. members will present a most different type of workshop, with emphasis on "What We Must Know *before* We Select An Audiovisual."

This often-neglected phase of program planning will be dramatically presented through: (1) examples and demonstrations of new, exciting audiovisuals and some of the old standbys; (2) the "producing" of a short program during the workshop hours; (3) presentation of a training program currently in use by a member's company.

Illinois Training Directors' Association is affiliated with the American Society of Training Directors. Established in 1943, I.T.D.A. has a membership of more than 200, mostly from the metropolitan Chicago area.

The purpose of I.T.D.A. is to advance the profession of education and training in industry and commerce. In striving for this objective, provision is made for the professional development of its members through the discussion of mutual training problems, the interchange of experiences, ideas and methods, and the general stimulation of interest in sound education and training.

Anyone with an interest in training is most welcome to additional information about the association. Write I.T.D.A. membership chairman Henry E. Hlavaty, Administrator of Personnel Programs, Visking Company, Div. of Union Carbide Corp., 6733 W. 65th Street, Chicago 38, Illinois.

# Industrial Audio-Visual Association

## *Program*

**Monday, August 8**

The Central Region of the Industrial Audio-Visual Association annually hosts a meeting of the association at the time of the National Audio-

Visual Convention for the convenience of those national members who will be in town for the convention.

The Industrial AV Association will meet in Room 440 at the Morrison. There will be an informal discussion during the luncheon hour, after which the members will be able to devote their time to visiting the exhibits.

(see following page)

when you specify:

**"BESELER, or EQUAL"...**

The Beseler

## VU-LYTE II

OPAQUE PROJECTOR

When your specification sheet for Opaque Projectors reads, "Beseler, or Equal" it can only mean Beseler Vu-Lyte II. We are proud that our name is used as a standard. But, we take even more pride in the fact that Beseler Vu-Lyte II Opaque Projectors have not been equalled, though often imitated.

### Here is the proof:

**1. UNIVERSALLY ADJUSTABLE PLATEN.** Vacuumatic platen\* holds single sheets flat, without flutter — eliminating copy holders. Platen mechanism lowers parallel to desired copy plane. Holds steady in preset position without locking — no fear of snapping closed. The problem of annoying light leaks around the platen has been solved by the new Beseler Flashield which attaches permanently in one minute and holds in every ray of light.

**4. LIGHTWEIGHT, RUGGED CONSTRUCTION.** All wrought and riveted aluminum construction, contoured to hug optical path, for maximum compactness. Weight only 29 lbs., with two carrying positions. As an added convenience it has a permanently attached 15 ft. power cord with molded on right angle plug, and storage space provided in the projector.

**2. PROJECTS ALL SUBJECTS.** Feed-O-Matic\* conveyor belt, crank-feeds continuous copy. Built-in drawer accepts glass plate for projection of books and glossy photographs. Large rear door for oversize specimens and easy access to projection lamp. Heat reflecting filter available for projection of temperature-sensitive materials.

**5. HIGH LUMINOSITY OPTICAL SYSTEM.** Delivers 140 lumens, for uniform projection even in lighted rooms. Secondary reflection system features unbreakable "Alzac" mirrors. Cooling system reduces heat to minimum. Virtually no fan noise!

**3. SPECIALLY DESIGNED LENS.** 5" diameter, 18" focal length f3.6 color-corrected, coated anastigmat for overall sharp image, with Double Rack and Pinion focusing. Permanently attached lens cap offers permanent lens protection.

**6. BUILT-IN PROJECTION POINTER.** Dust-proof Pointex produces bright, sharp arrow image that moves anywhere on screen. Optical system\* utilizes same lamp for protection and pointer — no extra lamps or external wiring.

\*Patent or Patent Applied For

There's only one way to get Beseler Quality on all features and to get these 6 advanced design "exclusives". When you order Opaque Projectors specify: "Beseler Vu-Lyte II — No Substitutes Accepted."

# "...AV media permit these ideas to be seen as well as heard"

by Chas. N. Shaw

Director, Central Region

Industrial Audio-Visual Association

Modern business is becoming more and more complex and urgency is the order of the day. There is increasing need for quicker and more accurate means of getting information from headquarters to the field and of presenting programs and promotions to buyers. Audiovisual media permit these ideas to be seen as well as heard, allowing more accurate and longer retention of information.

The development and use of audiovisuals is growing at a rate comparable to that of electronics and plastics. We of the Industrial Audio-Visual Association can be proud of the part audiovisuals have already played in our respective companies; however we have only scratched the surface, as there are still many phases or departments of most businesses that have not yet taken advantage of these modern tools of communication.

As brought out in our constitution: "The purpose of the Industrial Audio-Visual Association shall be to study all means of audio and visual communication, including creation, production, appreciation, use and distribution; to promote better standards and equipment and to establish a high concept of ethics in the relations of, our members with associated interests."

Among those present at the spring meeting of the Industrial Audio-Visual Association: from left, Willis H. Pratt, Jr., American Telephone & Telegraph, 2nd vice president; James Craig, General Motors, secretary; Alan W. Morrison, Socony-Mobil, president; Ralph Fairchild, LeTourneau-Westinghouse, assistant secretary; Fred Woldt, Illinois Bell Telephone, treasurer.

BY

**DRAMATIC NEW DEVELOPMENT IN TAPE RECORDERS!**

- Unique advance for modern teaching and learning!
- Develops oral skills and promotes retention!
- Excellent for language and speech students—speeds learning!
- Helpful to music students—helps improve technique!
- Benefits teachers—saves time and energy!

Exclusive V-M "Add-A-Track" is the big *new* feature in tape recorders! Opportunities for powerfully effective teaching methods are limitless! Record on one track, rewind the tape and record again on another track *while listening* to the first recording through the V-M recorder's own speakers or through

another speaker system. Then play-back again and you hear *both* recordings *simultaneously!* The student can rerecord his voice or instrument, repeatedly, without affecting the first (or master) track in any way. He can even play a duet with himself!

For budget-conscious administrators, here is the economical way to begin a completely effective modern language laboratory. Here, in one compact portable case, simplicity of operation is combined with practical versatility for the many uses it will find in every school.

Ask for a thrilling demonstration of V-M "Add-A-Track"—an engineering advance that benefits both in the classroom and at home. Investigate *today!*

V-M/"ADD-A-TRACK" 'tape-o-matic'®  
4-TRACK STEREO-PLAY TAPE RECORDER—  
Records and plays-back monophonically on  
four tracks. Plays stereophonic tapes. High-

Box 11150, St. Petersburg 33, Fla., Telephone: 7-1144  
*Exhibiting:* Oravisual easels  
*Personnel:* George J. Pippert
- Orr Industries Company** Booth M-85  
Division of Ampex Corp., P.O. Box 190, Opelika, Ala., SHERwood 5-7643  
*Exhibiting:* Irish Brand High Fidelity Recording Tape  
*Personnel:* Charles H. Donahue, Jr., J. Reynolds Carey, Warde Adams, J. J. McBride
- Ozalid, Audio-Visual Products** Booths M-93 & N-94  
Anso Rd., Johnson City, N. Y., SW. 7-2301  
*Exhibiting:* New overhead projector; Projecto-Printer transparency equipment; Ozamatic 60 duplicating machine; Audiovisual supplies and sensitized materials  
*Personnel:* James LeMay, Arthur Smith, Eric Burtis, Guy Lam, James Gillespie
- Paillard Incorporated** Booth C-27  
100 Sixth Ave., New York 13, N. Y. CA. 6-8420  
*Exhibiting:* Bolex Motion Picture Equipment  
*Personnel:* George Schectman
- Paulmar, Incorporated** Booth A-1  
4444 W. Chicago Ave., Chicago 51, Ill., CA. 7-5400  
*Exhibiting:* Model 60 automatic film inspection machines, automatic splicers, film conditioners, and other miscellaneous film library equipment  
*Personnel:* R. F. Menary, George Hauck, E. H. Simonsen, Joseph Firyck, Mrs. Paula Menary
- Pentron Sales Co.** Booth L-81  
777 S. Tripp Ave., Chicago 24, Ill., SA. 2-3201  
*Exhibiting:* Magnetic tape recorders, Repeater machines, Language laboratories, Stereo recording equipment, Sleep teaching equipment  
*Personnel:* George R. Royster, Irving Rossman, Howard Vierow, Hope Borows, Wm. Mullen, Theodore Rossman
- Phillips Catalogs** Booth B-18  
33 W. 60th St., New York 23, N. Y., PL. 7-3700  
*Exhibiting:* Audio-Visual Catalog for Dealers  
*Personnel:* Edwin M. Phillips, Daniel Katz, Jim Falconer, Arthur Silverstadt
- Photo Methods for Industry** Booth N-104  
33 W. 60th St., New York 23, N. Y., PLaza 7-3700  
*Exhibiting:* PMI magazine  
*Personnel:* Milton Astroff, Bill Parris, Robert Parris, Jules Wartell, Ralph Bergen
- Picture Recording Company** Booth M-86  
1395 W. Wisconsin Ave., Oconomowoc, Wis., LOGan 7-4416  
*Exhibiting:* Model PRC Tape Repeater; Models of PRC projection cabinets and projectors, including two continuous advertising projectors for 2x2" slides; 1000 watt Filmstrip Projector  
*Personnel:* George Howie, G. E. Musebeck, Mrs. Thelma Curtis
- Plastic Products, Inc.** Booth S-145  
1822 E. Franklin St., Richmond 23, Va., MILton 8-8059  
*Exhibiting:* Classroom light control Vinyl draperies  
*Personnel:* R. L. Withers, Sr., C. L. Truesdale
- Polacoat Incorporated** Booth N-96  
9750 Conklin Rd., Blue Ash 42, Ohio, SY. 1-1300  
*Exhibiting:* Lenscreen for rear screen projection in lighted rooms. Portable screens and Lenscreen materials for In-Wall or custom use  
*Personnel:* L. M. Heath

- Polaroid Corporation** Booths R-133 & R-134  
730 Main St., Cambridge 39, Mass., UN. 4-600  
*Exhibiting:* Polaroid Land Transparency System—finished slides in 2 minutes; Polaroid Land 3000 speed film—available light photography  
*Personnel:* Rolf M. Augustin, Jr., Robert S. Quackenbush, Jr., Joan H. Smith, Kemon P. Taschioglou
- Projection Optics Co.** Booth M-92  
271 Eleventh Ave., East Orange, N. J., OR. 6-6500  
*Exhibiting:* Transpaque and OpaScope Projection Equipment  
*Personnel:* Philip Berman
- Projector Belt Co.** Booth H-61  
Box 176, Whitewater, Wis., TUrner 3-2920  
*Exhibiting:* Replacements belts both spring wire and fabric type for 16mm and 8mm projectors; Rewind-takeup and motor drive belts  
*Personnel:* Helen Joy Dwinell, Richard Dwinell, Bill Dwinell, Jr.
- Psychotechnics, Inc.** Booth D-31  
105 W. Adams, Chicago 3, Ill., DE. 2-6277  
*Exhibiting:* Reading machines, films, and other teaching equipment related to reading improvement  
*Personnel:* Samuel N. Stevens, Jr., Samuel N. Stevens, Sr., Adeline Pruyne
- Quick-Set, Inc.** Booth E-38  
8121 N. Central Park, Skokie, Ill., OR. 3-1200  
*Exhibiting:* Tripods, Projectors and Projector Stands  
*Personnel:* Anthony J. Briglia, Paul C. Mooney, Edward Schultz
- Radiant Manufacturing Corp.** Booths J-70, J-71, J-72, J-73  
8220 N. Austin Ave., Morton Grove, Ill., IRving 8-9000  
*Exhibiting:* Audio Visual Projection Screens  
*Personnel:* Milt Sherman, Adolph Wertheimer, Herschel Feldman, Seymour Jacob
- Radio Corporation of America** Booths F-51 & F-52  
Front & Cooper Sts., Camden 2, N. J., WO. 3-8000  
*Exhibiting:* 16mm Projectors, Record Players, Tape Recorders, Language Laboratory Equipment, Educational TV Receivers, Electronic Lectern  
*Personnel:* A. J. Platt
- Robert H. Redfield, Inc.** Booth C-26  
1018 S. Wabash Ave., Chicago 5, Ill., HA. 7-2691  
*Exhibiting:* Portable Language Laboratory equipment  
*Personnel:* Robert H. Redfield, Dave Stevenson
- Rheem Califone Corp.** Booths B-20, B-21, B-22, B-23  
1020 N. La Brea, Hollywood 38, Calif., HOLlywood 2-2353  
*Exhibiting:* Automated teaching devices; language laboratory equipment; phonographs, tape recorders, radios  
*Personnel:* Robert G. Metzner, Robert J. Margolis, Geri Langsner, Charles Phillips, Harold Ort, O. X. Pitney
- Rutherford Duplicator Co.** Booth Y-200  
P.O. Box 13087, Houston 19, Texas and Chicago, Ill. JACKson 6-1021  
*Exhibiting:* Rudco Projection Tables  
*Personnel:* Gus Rutherford, Mrs. Gus Rutherford
- Safe-Lock, Inc.** Booth N-103  
870 W. 25th St., Hialeah, Fla., TUxedo 8-9532  
*Exhibiting:* Safe-Lock Project-O-Stands and Tripods  
*Personnel:* D. I. Welt, R. L. Welt, J. Childs, B. Childs
- Sawyer's Inc.** Booth R-14  
P.O. Box 490, Portland, Ore., MITchell 4-1181  
*Exhibiting:* Sawyer's correlated classroom materials  
*Personnel:* George H. Patton
- Seal, Inc.** Booth L-8  
8 Brook St., Shelton, Conn., RE. 4-1643  
*Exhibiting:* The making of transparencies using Transpa film; Sealamin laminating film and dry mounting presses and materials  
*Personnel:* Arthur M. Willoughby, Walter F. Miehle
- Allan E. Shubert Company** Booth N-9  
3818 Chestnut St., Philadelphia 4, Pa., EVergreen 6-297  
*Exhibiting:* Your Church; International Journal of Religious Education  
*Personnel:* Allan E. Shubert, William B. Shubert, Robert Lunn, William S. Clark, Rev. J. Martin Bailey
- Slide and Filmstrip Productions Ltd.** Booths X-192, X-193 & X-194  
292 Merton St., Toronto 7, Ont., Canada, HU. 3-6288  
*Exhibiting:* Slides, Filmstrips, Animated transparencies (Technamation)  
*Personnel:* C. Redford, Chas. Corn, Cecil Matthews, Howard Reichard, Stanley Schwartz, Geo. Baker
- Society for Visual Education, Inc.** Booth R-13  
1345 Diversey Pkwy, Chicago 14, Ill., LAkeview 5-150  
*Exhibiting:*  
*Personnel:* John C. Kennan
- Southern School Service, Inc.** Booth B-1  
Canton, N. C., MISSION 8-6400  
*Exhibiting:* Filmstrip filing cabinets, 16mm Film Storage Racks, Projection Tables and A-V Equipment Specialties  
*Personnel:* Kin McNeil, John M. Rigdon, Wallace W. Peck
- Spindler & Sauppe, Inc.** Booth M-9  
2201 Beverly Blvd., Los Angeles 57, Calif., DUmkirk 9-1288  
*Exhibiting:* Selectroslide professional automatic slide projection equipment  
*Personnel:* Norman A. Sauppe, George A. Sauppe, Albert Schnurpfeil
- Squibb-Taylor, Inc.** Booth 0-12  
1213 S. Akard, Dallas 2, Texas, RI. 7-3595  
*Exhibiting:* Taylor Spotlight Opaque Projector, Model TS-4 Taylor Spotlight Pointer, Taylor Adjusto Stand, Taylor "Spotlight" Projection Table  
*Personnel:* Clif Squibb, Jody Damton
- Stanbow Productions, Inc.** Booth M-8  
12 Cleveland St., Valhalla, N. Y., WH. 6-2600  
*Exhibiting:* Filmstrips and records produced by Stanbow Productions, Inc., the United Nations and the National Film Board of Canada  
*Personnel:* Bill Reimann
- Standard Projector and Equipment Co. Inc.,** Booths F-55 & F-56  
7106 Touhy Ave., Chicago 48, Ill., NIlles 7-8928  
*Exhibiting:* Combination Filmstrip and Slide Projectors, Filmstrip Projectors, Filmstrip Viewers, Projector Accessories, and Screens  
*Personnel:* Pat J. Kilday, Jim Reyord
- Sterling Educational Films** Booth N-9  
6 E. 39th St., New York 16, N. Y., MU. 3-3642  
*Exhibiting:* Journey Into Time—Dr. Jekyll & Mr. Hyde—The General  
*Personnel:* Leonard Feldman

- Strong Electric Corporation** Booth P-129  
87 City Park Ave., Toledo 1, Ohio, CH. 8-3741  
*Exhibiting:* Strong Universal Carbon Arc Slide Projector  
*Personnel:* N. E. Alexander
- Superscope, Inc.** Booth W-188  
8150 Vineland Ave., Sun Valley, Calif., TR. 7-1313  
*Exhibiting:* Sony Stereorecorder 300, Sony Tape recorder 262-S, Sony CR-4 Wireless Microphone, Sony C-37A Condenser Microphone  
*Personnel:* Irving Rose, Sheldon Shack, Fred Tushinsky
- Sylvania Electric Products Inc.** Booth D-35  
Photolamp Division, 1740 Broadway, New York 19, N. Y., JUDson 6-2424  
*Exhibiting:* Full Sylvania line of Projection Lamps  
*Personnel:* R. W. Lockman, Al Gordon, Rodger Kramer, Preston Reed, Carl Nelson, Harold Carter, Rush Munder, Curtis Oaks
- Synchro-Mat Equipment Corp.** Booth B-19  
1316 Wildwood, Jackson, Mich., ST. 4-3721  
*Exhibiting:* Synchro-Mat line  
*Personnel:* D. Siegel, A. Shadley, R. Rogers, B. Rutter
- Transvision, Inc.** Booth R-141  
31800 W. Eight Mile Rd., Farmington, Mich., KENwood 3-8800  
*Exhibiting:* 16mm Sound Motion Picture Projectors  
*Personnel:* Paul E. Ruedemann, Edward H. Lerchen
- Technical Service Incorporated** Booths I-66 & I-67  
460 North Ave., New Rochelle, N. Y., NE. 6-6000  
*Exhibiting:* TV classroom Receiver; TV Mobile Stand  
*Personnel:* Alvin Reinberg, Herbert Suesholtz, Stanley Marks
- Underwriters Films** Booth N-105  
2025 Glenwood Ave., Toledo 2, Ohio, CHerry 8-3361  
*Exhibiting:* Audio-Visual Sound-Slide productions for the insurance industry  
*Personnel:* Robert W. Miller, Robert E. Harrison, A. J. Ruhfel, Jane Ruhfel
- United States Office of Education** Booth E-39  
Educational Media Branch, 7th & D Sts., S. W., Washington 25, D. C., EXecutive 3-3600  
*Exhibiting:* Reports on Title VII Activities and Publications of the Educational Media Branch of the U.S. Office of Education  
*Personnel:* Roger L. Gordon, J. J. McPherson
- V-M Corporation** Booths B-14 & B-15  
280 Park, Benton Harbor, Mich., WA. 5-8841  
*Exhibiting:* Tape Recorders, Language Lab Applications, Phonographs  
*Personnel:* C. J. Stevens, M. B. Cain
- Victor Animatograph Corporation** Booths R-131 & R-132  
a division of Kalart, Plainville, Conn., SHERwood 7-1663  
*Exhibiting:* Complete line of Victor and Victor-Soundview Motion Picture and Sound Slidefilm equipment and Accessories  
*Personnel:* John J. Harnett, Hy Schwartz, Morris Schwartz, Mort Goldberg, Ted Gromak
- Victorlite Industries, Inc.** Booths N-112 & N-113  
4117 W. Jefferson Blvd., Los Angeles 16, Calif., RE. 2-4033  
*Exhibiting:* Visual Cast Daylight Overhead Projectors and Packaged Transparency Course Materials  
*Personnel:* James J. Fitzsimmons, Robert J. Brady, George Post, Joseph Haslinger
- Viewlex, Inc.** Booths 0-116 & 0-117  
35-01 Queens Blvd., Long Island City, N. Y., EXeter 2-0100  
*Exhibiting:* Slide and filmstrip projectors and sound filmstrip equipment  
*Personnel:* M. R. Abrams, Ben Peirez, Fran Welch, Russ Yankie, John Conlan
- Viking Of Minneapolis, Inc.** Booth A-5  
9600 Aldrich Ave., S., Minneapolis 20, Minn. TU. 1-2636  
*Exhibiting:* Viking of Minneapolis language laboratory equipment  
*Personnel:* John L. MacAllister
- Wallach & Associates, Inc.** Booth S-148  
1589 Addison Rd., Cleveland 3, Ohio, SW. 1-5580.  
*Exhibiting:* Cabinets for: Records, tapes, films, filmstrips, combination cabinets, mobile units and mobile A-V center  
*Personnel:* Charles D. Wallach, Mrs. Chas. Wallach, Larry Oliver, Alvin Tengler, Mrs. Alvin Tengler
- Webcor, Inc.** Booths R-139 & R-140  
5610 W. Bloomingdale, Chicago 39, Ill., TU. 9-8500  
*Exhibiting:* Educator tape recorder for language lab installation. Portable tape recorders, portable fonographs  
*Personnel:* Ed Normandt, George Simkowski, Lou Burdick, Martin Jensen
- Webster Electric Co.** Booths R-142 & R-143  
1900 Clark St., Racine, Wis., ME. 3-3511  
*Exhibiting:* Electronic teaching equipment, tape recorders, communications  
*Personnel:* C. W. Stacey, Rob't. Baldwin, W. E. Dent, H. C. Stacey
- Westinghouse Lamp Division** Booths H-64 & H-65  
1 MacArthur Ave., Bloomfield, N. J., HUMBoldt 4-3000  
*Exhibiting:* Light sources for audio-visual educational equipment  
*Personnel:* W. R. Wilson, F. H. Rixton, R. D. Barr, W. A. Cramer, A. Frankel, R. L. Allen, J. J. Burke, R. D. Reynolds
- H. Wilson Co.** Booth M-87  
106 Wilson St., Park Forest, Ill., PI. 8-2706  
*Exhibiting:* Portable classroom rear projection unit and complete line of projection tables  
*Personnel:* Howard Wilson
- Wood-Regan Instrument Company, Inc.** Booth T-171  
184 Franklin Ave., Nudley 10, N. J., NO. 7-2460  
*Exhibiting:* Wrico Sign-Maker and accessories; Wrico lettering guides and pens  
*Personnel:* Arthur J. Lempeler
- World Wide Pictures** Booth T-164  
P. O. Box 1055, Sherman Oaks, Calif., STATE 4-5515  
*Exhibiting:* Religious motion pictures  
*Personnel:* Brunson Motley, Dick Ross, Dave Barr
- Your Lesson Plan Filmstrips** Booth A-4  
1319 Vine St., Philadelphia, Pa., and 14-20 Glenwood Ave., Raleigh, N. C.  
*Exhibiting:* New color filmstrips with "built-in student participation" for science, mathematics; and foreign language—sixty French and Spanish language training filmstrips with recordings and student development books  
*Personnel:* E. E. "Jack" Carter, John P. Voorhees, Donald Kunz, Ruth Hentz

# We Must Educate for Survival of Democracy

by Maj. Gen. J. B. Medaris, USA (Ret.)

Chairman of the Board

Electronic Teaching Laboratories, Inc.

The history of man is that of infinite struggle—struggle against poverty and disease and disaster. Long ago, perhaps in even those unrecorded days of primitive existence, man began to discern that ignorance is the root of his troubles. Man then surely concluded that his ultimate survival depended upon his ability to acquire and transmit knowledge, that this was the challenge of his time.

Ignorance is still our fundamental challenge, and I would guess it to be the challenge of our kind in the years 2060 or 9060. Ignorance is elusive. Knowledge is not stable. The child born tomorrow will be as ignorant as dirt and the sum of mankind's knowledge is meaningless unless it is transmitted to the child.

But aside from the generalities of the need for learning, I believe that the American of 1960 has a unique challenge in education, a challenge posed by the prospect of world Communism.

As participants in a democracy we demand certain freedoms of individual thought and action and association. We count these freedoms holy, and we have defended them with human sacrifice. We are prepared to continue the defense of these freedoms. However, one of the by-products of our demand for freedom is a mechanism of government which cannot function without our will. This is right and proper, and only in circumstances of extreme threat have we willingly suspended our individual freedoms so that our government might function without our immediate consent.

There is a very practical limit to which the individual can contribute to the processes of democratic government: he can vote; he cannot administer. Thus his single vote must be an intelligent, knowledgeable vote. That vote must include some understanding of the principles of good government and some evaluation of a candidate's ability to administer good government. It is an awesome responsibility for a single vote to bear, but it is an inescapable one if we are to

retain individual freedom. By voting, we simply decide who will decide for us.

In the past few years we have become disturbed by the economic and technological growth of the Communist world. Their growth is cleanly planned and executed, uncluttered by indecisive policy. Our government appears to be floundering, and about the only thing on which all Americans agree is that something radical must be done before Communist successes reduce us to an enfeebled power in world affairs.

What can be done? Several things, I believe; but first, let us consider whether or not our government actually is floundering. To begin with, we are following precisely the same principles of action that we have followed since 1776. We have not substantially changed in that respect. We elect intelligent and informed men to office and they execute our desires. We are rich and healthy and insulated, at least temporarily, against the probability of destruction by an aggressor. Our cup runneth over, to the benefit of millions of destitute people all over the world.

But something *has* changed, and that something is the formulation of a Communistic process of government and the demonstration of that government's effectiveness in mapping a plan of action and proceeding to its fulfillment, unencumbered by demands of individual freedoms. This does not mean that a Communist government is either immune or indifferent to public opinion. On the contrary, having usurped the will of the people in gaining power, the Communist government thus has in its control those means by which public opinion can be shaped to appropriate the very policies of government. The Communist government can give the peasant bread and convince him that he is eating cake.

Further, the Communist government can impose all manner of sacrifices on the individual in the name of diverting national energies and resources to "the race with capitalism." It is folly to underestimate the impact on the individual

General Medaris

Communist of Soviet accomplishments in technology. What can the individual Communist conclude from U. S. failures and Soviet successes in the space field except that his leaders were right all along—that capitalism is innately ineffective and democracy is decaying? It does not matter that this is one small area in the vast field of science, and that the Soviet Union is far behind in many other areas of science. The point is that this is an example of what Soviet government can do when it makes up its mind to do it.

Against this backdrop of fanatical dedication to immediate, radical action, our own processes of decision-making and execution appear belabored and untimely. We are changed simply by contrast. We are doing business as usual, but "as usual" is no longer good enough.

Clearly, we must acquire the capability to define national aims and to pursue those aims with the same enthusiastic dedication that our competitors are enjoying.

How? The easiest way would be to strengthen the powers of our own government, to surrender a measure of our individual freedoms so that our government could decide what is best for us without fear of being thrown out of office. This would relieve the individual of much of the responsibility of intelligent choice of leadership, and assure him of positive, dynamic government. It would not guarantee him that he would like what his government did, or that he could retrieve his right to disagree once he had surrendered that right.

The other choice is more difficult. If we refuse to part with those individual liberties and at the same time demand more decisive and dynamic leadership from our government, we must be prepared to fulfill the responsibility that is thus entailed. In other words, the burden of providing more effective government lies with the individual. It means that he cannot be ignorant of na-

tional and international affairs. It means that he must develop some higher loyalty to national interest that is not purely a reflection of his own economic, religious, or ethnic interests. It also means that his interest in government must not be something that is only evinced every four years. It means that his vote in a national election must be a decision based on real knowledge of the issues involved, and that his vote, once cast, is not *carte blanche* consent that will not be questioned for the next four years.

To be realistic, I must admit to some misgiving that we will ever be able to maintain substantial national concern over the full breadth of national and international affairs. It is simply not the nature of most of us to be philosophically concerned with abstractions. We are concerned about the space race only when we are behind. We are concerned about economic trends only when they have caught up with us. We fear war only when we see the possibility of it. We live with the immediate.

However, the more knowledge an individual has the more inclined is he to look behind and beyond the immediate—to seek causes for political and economic defect and to attempt to prevent their recurrence in the course of tomorrow's events. One can therefore conclude that the creation of a more knowledgeable electorate would result in the creation of a more responsible and effective electorate. I believe this to be the peculiar challenge of the Sixties: How can we educate for the survival of democracy?

If knowledge were stable this challenge would be easier met; it is not. The generation of knowledge is not geared to a timetable. The sheer bulk of learning which tomorrow's child will have to absorb is in itself staggering, all because of the explosive growth of modern science and technology.

Even the arts are not immune to change. In the field of languages, for example, there is an unprecedented demand for people who are not linguistically crippled by knowledge of only their native tongues. It is often said that the world is shrinking under the impact of transportation technology. It is to be hoped that the result of the shrinkage will be more intelligible communication among peoples and not merely the movement of pig iron to Japan and fireworks to North Africa.

Thus, the educator of the Sixties has a dual burden. On the one hand he is required to teach more to the child, and on the other he is expected to do it in less time in the name of national urgency. What is the answer to this paradox?

I submit that the answer to this problem is the increased application of technology to the teaching process.

Because we have progressively more to teach, because we have progressively more children to be taught, and because our survival depends upon a knowledgeable citizenry, it is imperative that professional educators make maximum use of those techniques which technology is offering.

As long as ignorance is our fundamental challenge, we cannot afford anything less than objective consideration of any means by which ignorance can be overcome.

# Closed-Circuit Conference

by Wm. F. Kruse

A nationwide conference on prospects and practices of closed-circuit television for instructional purposes was held June 19-22 in Evanston, Illinois. All but the opening and closing sessions were held in giant Evanston Township High School where, under direction of Miss Wanda Mitchell, an extensive foundation-supported CCTV program has been in operation for several years.

The National Education Association's Division of Audiovisual Instructional Services sponsored the conference; 150 invitations were issued, approximately 135 accepted, some 85 attended, all professionally interested in this specific segment of the AV field.

Lee A. Campion, NEA's consultant on ETV matters, explained informally that this type of conference was precisely what was needed to serve the special interests of the educator-specialists who now work in a sort of professional "no man's land" midway between DAVI and NAEB (Department of Audiovisual Instruction; National Association of Educational Broadcasters). They are closer to DAVI, he felt, because most CCTV programming has classroom instruction as its end. But while NAEB primary interest is in mass communication its technical practices and resources are very similar to those of the CCTV specialist.

The conference program was very well planned. Three groups rotated in three sections—on Program Origination, Production and Distribution respectively—with each participant getting a full session in each of the sections. The preliminary program had also called for a section on "receiving" CCTV.

An effort was made to form homogeneous interest groups. Thus there was one comprised mainly of college and university people, the second predominantly participants from secondary schools and city systems, and the third most everyone else.

The general opening dinner session was addressed by Lloyd Michael, superintendent of the host high school; another evening session featured William Brish, county school superintendent at Hagerstown, Maryland, on "Four Years of Experimentation in CCTV." Afternoon general sessions were conducted by Miss Mitchell and by Dr. Sherman Swarthout and John R. Manley. The closing general session, conducted by Lee Campion and Neal Balanoff, chairman of the TV-Radio-Film department, Stephens College, summarized some of the findings and gave everyone a final chance to talk.

At another general session six representatives of the AV-TV industry presented a joint program on equipment resources and prospects. Alan Finstad (Dage) was moderator; William Sadler (Miratel), Glenn Hoxie (Ampex), Louie Lewis

(RCA), Dan Meadows (Sarks-Tarzian) and Lloyd Matter (Dage) each presented a specific phase of technology and economics.

It was noteworthy that the questions raised were not so much on technology as on professional status, philosophy and utilization. They boiled down to just four major concerns: (1) relative "status" between the CCTV production specialist and the TV teacher; (2) just how much production "quality" should be required in intra-school program production and transmission; (3) should the modern school aim at giving the student his "entire" education via TV; and (4) how to condition the classroom teacher to accept and where designated, effectively help create CCTV programs. These four questions were found to be interrelated. Status differentials and quality-tolerance may be viewed as facets of the "content versus communication" controversy. Food for the mind, as for the body, should first of all be nutritious, but lots of good vittles have been known to be ruined by bad cooks and sloppy service.

There was quite a contrast between a color slide presentation of the CCTV facilities and staff at Penn State and those actually demonstrated at Evanston High, where one student crew sets up the studio and an entirely different one, unrehearsed, shoots the program. Under such an arrangement considerable unevenness in end result is inevitable. In one case a "live" program (stage make-up for male actors) came through as smoothly finished as anything on the networks, but another, through faulty lighting or training or both, had the poor librarian-teacher painfully blinking into the lights in a way that must have detracted from the material she sought to present.

There was room for improvement also in the presenting of visuals—printed matter too small to be read, violation of the 4x3 dimension ratio and of contrast range for projected visuals, and stills covering so little of the screen that they became the picture of a picture rather than a presentation of action or situation described. Nor were the 'pros' free of these faults in their demonstrations, indicating a need for upgrading of CCTV technical communication skills on all levels.

One of the speakers defined CCTV as "a means of transmitting an image for a purpose." Under the conditions in which it operates, the Evanston High School production staff is doing a commendable job that, in the main, achieves its purpose. Allowing for some rationalizing in the snubbing of network "spit and polish," there was fairly general agreement that a school's own CCTV production quality ought to be at least adequate to hold students' attention and to pass across its lesson effectively.

Technical guidance literature such as put out by Hagerstown, Stephens College and other centers was in lively demand. A series of N.E.T. films on production techniques, distributed by

Indiana University, was recommended. The Electronics Industry Association reportedly will distribute 20,000 copies of a new book on ETV fundamentals authored by Philip Lewis, director of instructional materials for the Chicago public schools (also technical director of *Educational Screen and Audiovisual Guide*).

There was interesting discussion on the role of "visuals" in educational TV. One production consultant stated his preference for holding a dynamic TV teacher on camera full face by the hour rather than bring in a lot of distracting "visuals." Miss Mitchell and Mr. Balanoff, on the other hand, stressed the use of good visuals.

There was no support for the idea that TV could or should attempt the whole job of the student's instruction, much less his education. Cooperation in an atmosphere of mutual respect was the accepted answer to teacher-producer relations; as teachers increase their familiarity with the medium and its techniques they are expected to take a more active positive interest in TV

teaching and to improve their contributions to its results.

In his keynote address, superintendent Michael stressed the need for greater investment in "tools of instruction." He did not expect CCTV to save money, but did look to it for "better quality education." It would re-deploy and re-orientate teachers but not replace them. This was not, in his opinion, a panacea to overcome all present classroom problems but, with television tape making possible the storage of "superlative" teaching, TV should make a substantial contribution to better schooling.

In the future, he felt, students would spend 40 percent of their time in individual training, 20 percent in small groups of 10 to 15, and 40 percent in large group situations.

The conference wound up with a recommendation that further meetings of this type be arranged, preferably with each CCTV craft "pro" accompanied by a classroom teacher involved in TV lesson production and/or use.

At left, planning for CCTV. Left to right, Neal Balanoff, Stephens College; Wanda Mitchell, Evanston, Ill., Township High School; James Lynch, Indiana University; William Mavrides, TV coordinator, Akron University; Lee Campion, ETV consultant, NEA; William Pohts, TV Engineer, Penn State University; Alan Finsted, Dage Television Division.

# Assignment:

## DAVI

# Personnel:

## 1970

by James D. Finn  
Professor of Education  
University of Southern California  
and  
President  
Department of Audio-Visual Instruction  
National Education Association

*(The Board of Directors of DAVI will meet in closed session during the National Audiovisual Convention and Exhibit in Chicago. In further observance of one of the major AV events of the year, Dr. Finn presents this view of DAVI's responsibilities during the coming decade.)*

*The disease in all professions is stagnation, a failure to grow in professional wisdom and competence. (Edgar Dale, 1960)*

TO begin with a cliché, the Department of Audio-Visual Instruction is *people*. As I have said elsewhere, these people are a wonderful conglomerate; there are teachers of the first grade who are audiovisual building coordinators in small schools; there are communication theorists working on the campuses of large universities; there are audiovisual directors in school systems and colleges with operations so vast that all bookings are handled by IBM, and others so small that slide production is carried on in the director's kitchen on week-ends; there are producers, librarians, misplaced curriculum specialists, military officers with a training aids specification number, religious audiovisual workers, broadcasters, government information specialists, applied psychologists and at least one college president. And this is but part of the list.

DAVI, since it began to grow up about 1952,

has provided a home for these many different people who have a common interest in audiovisual communication. Looked at another way, of course, DAVI is an organization; it is a national office of growing importance in the NEA; it is a host of committees working on projects ranging from cooperative libraries to educational networks; it is a publishing house and it is the national posture for the educational profession on matters of instructional technology. Fundamentally, however, as old and tired as the concept seems, DAVI is people—the people that make up the organization and the committees and who write for the publications and who develop the national posture.

When assessing the “challenge of the sixties,” as this symposium is attempting to do for the audiovisual movement as a whole, it is fitting, I think, that the DAVI contribution should concern itself with the people involved, with the future requirements of the audiovisual profession, whatever they may be. The future of any movement depends on the quality of the people who support and develop it.

Actually, even when confining the discussion to the educational (as opposed to the commercial) personnel needs for audiovisual specialists in the next decade, it is obvious that we will need, first of all, a much larger number than during the past ten years. Second, we need all the talent and quality in this larger number that we can get. Our first problems, then, not at all new to the educational scene, are the twin problems of quantity and quality of personnel.

The need for large numbers of highly qualified people is a function of a technological society as a whole and is not limited to a small segment such as that portion of the educational profession represented in the audiovisual specialist. C. P. Snow has recently pointed out that,

“There is one curious result (of technology and industrialization) in all major industrialized societies. The amount of talent one requires for the primary tasks is greater than any country can comfortably produce, and this will become increasingly obvious. The consequence is that there are no people left, clever, competent and resigned to a humble job, to keep the wheels of social amenities going smoothly round. Postal services, railway services, are likely slowly to deteriorate just because the people who once ran them are now being educated for different things. This is already clear in the United States, and is becoming clear in England.”<sup>1</sup>

The talent needed for the primary audiovisual tasks is very great indeed.

A professional organization must address itself to the work of developing the competence of its members. This, then, is one of the big jobs for DAVI in the decade ahead. A start has already been made with the first Invitational Seminar on Professional Education which was held in conjunction with the 1960 DAVI Convention in

<sup>1</sup> C. P. Snow, *The Two Cultures and the Scientific Revolution*, New York: Cambridge University Press, 1959, p. 58.

Cincinnati. The Seminar was the brain-child of L. C. Larson of Indiana University and was authorized by the action of the Seattle convention in 1959.

The first seminar began a study both of the content for the professional education of the general audiovisual specialist and the pattern in which this content must be developed. Much remains to be done even to lay the groundwork, and plans are now underway for a series of such seminars which will eventually, we hope, specify pretty clearly the pattern of training and experience that the new instructional technology will require of its leading practitioners.

By 1970, the demands on the audiovisual specialist—the learning technologist—are going to be rigorous. First class talent will be needed to fulfill a first class demand. This means that, in addition to a rigorous pattern of training, we will need standards of admission, especially to full-fledged standing in the profession. Until very recently, the educational profession as a whole has been very reluctant to adopt this characteristic of other professions. Now, however, signs of a new attitude may be seen in several places.

The American Association of School Administrators has already taken the step of setting up admission standards; naturally, in all such arrangements, there is a "grandfather clause" to avoid threatening many existing and dedicated people in the profession. Eventually, however, the new standards take over. It is especially significant, I think, that Dr. Richard Batcher, immediate past president of the Classroom Teachers (the largest NEA division), has been advocating immediate adoption of minimum professional standards for admission to his organization. It is my personal position that we need to begin immediately studying the problem of standards of membership in DAVI; we will end up, I think, before 1970, with classes of membership and standards of admission to these classes; only by such a procedure may we develop and provide the much-needed talent for the primary tasks of audiovisual communication in the future.

A rigorous pattern of content and training for the general audiovisual specialist to achieve competence, and enforcement of this competence by selective standards of admission, provide the form of the solution to the audiovisual manpower problem of the next decade. The substance of the solution is another matter, a matter that must be worked on very hard. DAVI, through its seminars, through contact with other branches of the educational profession and with industry, through the thought and research of leading thinkers in our own and related fields and through general discussion among the membership, must come up with a content for audiovisual professional training.

It is easy enough to list some of the items in this content: communication theory, learning psychology, systems theory, curriculum, technical areas like production, etc., etc., etc. We need, however, a pivot on which to swing this content, whatever it may be. That pivot must deal with the leadership role that the members of DAVI must play in the next ten years. How does our organization provide leadership? How

Dr. Finn

does it provide leadership not only for the audiovisual group as a whole, but for the entire educational profession in matters touching our specialty? Make no mistake about it. DAVI—the people who make up DAVI and the posture the organization takes—is important today, nationally and internationally. Our time has come. The demand for leadership is here. How shall we exercise it?

One thing is certain. L. C. Larson, in his series of memoranda on the professional education problem, has insisted that the audiovisual professional must be a *change-agent* in education. I would go one step further and define the audiovisual professional as a learning technologist who is essentially an *innovator*. Change-agent or educational innovator, the audiovisual specialist faces daily (and will continue to do so) the problems of the most rapid change occurring in American education. Almost all the current educational changes are related to, caused by or, are part of our developing instructional technology. And this whether we are talking about the current problems of TV, teaching machines and language laboratories, the immediately anticipated 8mm sound film, thermo-plastic recording and instructional systems development, or the future applications of computers as teaching machines, facsimile communication between schools and data-retrieval and cataloging systems.

It is apparent that the next ten years will demand that the pivot of our professional core be based upon an ability to deal with change and innovation throughout education. The end of the decade of the Sixties should see the true audiovisual professional come into being. The membership of DAVI, then, as learning technologists, as innovators, as change-agents will be, God willing, supplying American education with the needed leadership from the individual school through state systems to the federal government.

This leadership imperative to close with another cliché, is a great challenge. It is also a great adventure. There is, it seems to me, little place in the audiovisual future for the faint-hearted or those who prefer the good old days of the carbide gas slide lantern. There is a large place for those who want growth in professional wisdom and competence.

## Campaign — 1960

The nominating conventions are over. The candidates for office of president and vice president of the United States have been named and are preparing their campaigns. Internal party political enmities will be temporarily buried while the political faithful rally around the standard bearers and indicate their support of their party's candidates.

Of course we prepared for this in May and June. Despite the approaching school-year end, we found time to begin to delineate major political and social issues which would be emphasized before the conventions and during the campaigns. We followed the several primary contests—West Virginia, Oregon, Wisconsin and the others with our classes as we helped our maturing students prepare to observe this national contest and, in observing and in stating their preferences and opinions, to take part in this event.

Where do we find the best history of past campaigns? In the newspapers? In files four years musty are the records of the second Eisenhower-Stevenson campaigns. In files are the words that each man spoke, the promises made, the story of endless hours

We can refer our students to the papers and to the newsmagazines of that year and to other permanent of campaigning, traveling, speaking, and moving on to the next brief stop. printed data which tell the story but which lack the excitement of the feeling of presence.

Are there films to give life to the campaigns? There are newsclips of the earlier campaign which may be available for school use. There are films describing political campaigns which should be used as interest in the current campaign grows to the climax of ELECTION DAY!

There are recordings which give depth and breadth to previous campaigns and which can be used effectively in schools. First, of course, are the tape recordings made four years ago and carefully stored for just this purpose. Schoolmen throughout the country kept careful audio records of "Campaign-1956" and are ready to bring out the salient recordings of that year and present them to their classes for critical appraisal.

And there are the parallel recordings which have been made this spring as the potential candidates paraded their views before radio and television audiences. Yet, there is a large library

**RUGGED

of recorded material—home recorded but nonetheless effective.

And there are commercial recordings of past campaigns which are most valuable in helping our students prepare to follow and to understand "Campaign—1960."

Let's start with some faraway background material that can be useful. The changing nature of the political scene and of political expression can perhaps be best demonstrated by showing an old time orator and comparing his techniques and presentation with some more recent speakers.

There is the famous "Cross of Gold" speech which was delivered by William Jennings Bryan back in 1896. This was delivered during the Democratic convention of 1896 in Chicago. William Jennings Bryan, "the boy orator of the Platte," made of this famous speech a campaign issue, and as a result of his presentation he became the candidate for president. This speech is read by Ed Begley as part of the album Great American Speeches (Caedmon TC 2016). Also in this album are such other campaign and inaugural addresses as "Washington's First Inaugural Address" (read by Ed Begley), "Thomas Jefferson's First Inaugural Address" (read by Melvyn Douglas), and Carl Sandburg reading both the "House Divided" and "Cooper Union" speeches delivered originally by Abraham Lincoln.

The series I Can Hear It Now can be used effectively to summarize some of the more recent presidential campaigns. Volume III of this series (covering the years 1919-1932) includes such choice items as Daugherty's "smoke filled room" prediction (could it happen in 1960?) as well as the voices of Harding, Coolidge, Hoover, Roosevelt and Al Smith. Volume I (1933-1945) brings the voices of Roosevelt, Landon, Willkie and Dewey to the attention of the student. Volume I continued the chronicle with the years following the close of World War II summarizing the major conventions of 1948 and the Dewey-Truman campaigns of that year. These records are produced by Columbia and are numbered ML 4340, ML 4095 and ML 4261 respectively.

Other recordings worthy of consideration are Mr. President — FDR To Eisenhower (RCA Victor LM 1753) and Veep (Folkways FS 3870).

Coming to the 1956 campaign, there is a recorded history of that event titled Campaign '56 produced by Yale University. The recording presents the voices and sounds in the election of the president of the United States in 1956. Heard in addition to the major

candidates, Eisenhower and Stevenson, are Kefauver, Nixon, Harriman, Stassen, Clement, Langlie, Chandler, Martin, Rayburn, Hoover, Truman, Kennedy and Eleanor Roosevelt. Campaign Fifty-Six recalls for the student and the listener the primary fights, the excitement of the two national conventions, the intensity of the hard fought national campaign, and finally the long awaited night when the nation's choice of a president became

known. It can be used most effectively to orient today's students to the events happening around them.

Finally, inauguration addresses of the modern age come into focus. These are available on Franklin Delano Roosevelt—1933 and 1937 (Spoken Word 115), Franklin Delano Roosevelt—1941 and 1945 and Harry S. Truman—1949 (Spoken Word 112) and Dwight David Eisenhower—1953 and 1957 (Spoken Word 113).

The election campaign will be heard this year—via radio and television—and we can help our students prepare themselves not only to hear but also to understand the nature of the campaigns and the words that are uttered by the candidates.

### Upcoming

Looking ahead to anticipated new recordings is always hopeful. Somehow the recordings you look forward

to hearing are going to be the best yet, always and all ways. We anticipate reporting to you on the continuation of Audio Education's Pathways To Phonic Skills with the early release of Volumes II and III. This material, designed of course for elementary school consumption, will be reported in the near future.

Upper elementary school and junior high school students and their teachers have found the productions of

Enrichment Materials consistently useful. This year there will be eight new titles available for school, library and home use including, in the American history series, Swamp Fox of the Revolution and Custer's Last Stand along with Andrew Carnegie: Age of Steel backed up with America's First World War. In their Great American Documents series Enrichment will offer Northwest Ordinance along with Missouri Compromise on one record and Woodrow Wilson's 'Fourteen Points' on the reverse side of a presentation and delineation of the Preamble to the Charter of the United Nations.

English literature and American poetry stand to have a 'good year' too. Junior and senior high school students will profit undoubtedly from hearing and reading simultaneously the complete Julius Caesar which will shortly be available from The Spoken Word. This and King Lear will both be on the market before schools reopen for the 1960-1961 academic year. Both will be complete—and both performed by the Dublin Gate Theatre group, directed by Anew McMaster and produced by Fred O'Donovan. McMaster, who will play Marcus Brutus in Julius Caesar will also play the title role in King Lear.

Anew McMaster will also be available from Spoken Arts in selections from Shakespeare in a two record album which will offer the exponent of the heroic style of acting as Petruchio in Act II, Scene 1 of The Taming of the Shrew, Othello in Act V, Scene 2 of Othello, Shylock in Act I, Scene 3 of The Merchant of Venice, Romeo in Act I, Scene 4, and Act V, Scene 3, of Romeo and Juliet, the King in Act II, Scene 4 of King Lear, the melancholy Dane in three scenes (Act II, 2; Act III, 1 and 2) from Hamlet, Macbeth in Act I, Scene 7, and Act II, Scenes 1 and 2, of Macbeth, as Jacques in Act II, Scene 7 of As You Like It and as Caesar in Act III, Scenes 1 and 2 of Julius Caesar.

Of course there will be new language records and other materials designed for all grade levels using language laboratory learning techniques. We anticipate that there will be a variety of recordings in French, Spanish, German and Russian with fewer offerings in Italian and other languages.

Basil Rathbone's reading of The Minister's Black Veil and Young Goodman will be offered by Caedmon. There will be many others as the new school year progresses and the first announcements give promise of a banner year in the expanding spoken and instructional records area.

# FILMSTRIPS

by Irene F. Cypher

We have always said that there was great merit to "field trips," and this past week we had an opportunity to prove this, for we went visiting the audiovisual program of Toronto, Canada. There is a fine group of leaders in that city, and we strongly advise our friends to go a-visiting as we did, for it gives you an opportunity to see what is being done in various parts of the globe, as well as to watch a neighboring school system in action. One particular opportunity was given us to watch a second grade in action, and it *was* an opportunity (speaking in terms of filmstrip utilization)!

A lovely tow-headed lass in a blue sailor dress was quietly and efficiently operating the filmstrip projector, and the members of the class were observing, reading, questioning and talking at a fine pace. No one said anything about "watch this filmstrip and it will show you . . ."; no one said anything about "in this filmstrip you will learn about," or anything else of that nature.

The class projectionist was calmly presenting to her classmates an experience which they could share and which helped them to discuss the material about which they were "reading." It was an example of filmstrips in use in a normal classroom situation, without fuss and fanfare.

As we quietly left the classroom we thought how wonderful it was to see modern children actually using mod-

ern instructional materials as part of the everyday course of events and not making a lot of uproar about it. The principal was proud of the fact that every classroom was equipped so that such learning experiences could take place; the class thought nothing about projection (for it was all part of the usual routine), and the result was a group of children really participating in learning. Wonderful, isn't it, to be able to report that perhaps we are making progress in the use of instructional materials as an integral part of normal school work. (And think of how nice it is to find a second grade class as the ones sharing in such an experience).

## "FIBERBILT" CASES "THEY LAST INDEFINITELY"

# YOURS FOR THE ASKING!

Tecnifax Corporation is continuously developing in its Visucom Laboratories new and interesting techniques for using the "overhead" projector. Training in these techniques is available to you, without charge for materials, facilities or instruction, through the following services:

**SEMI-ANNUAL SEMINAR-WORKSHOPS** . . . at these hard-working, three-day seminar-workshops, over 500 attendees acquire information, exchange ideas, and use new visual techniques to solve communication problems . . . 16 held to date.

**VISUCOM PROGRAM** . . . this continuing training program provides first-hand experience in the preparation of "overhead" projectuals . . . five-day course . . . small classes . . . facilities for working out specific projects.

**TECNIFAX LITERATURE** . . . a series of brochures published by Tecnifax to provide useful and interesting information for workers in the field of visual communication.

FOR ADDITIONAL INFORMATION, call or write Tecnifax Corporation, Holyoke, Massachusetts.

Tecnifax equipment and materials are approved for purchase under the National Defense Education Act.

**BRANCH WORKSHOPS** . . . projectual-making workshops are also conducted at Tecnifax' twenty-six sales branches . . . registrations are accepted for groups or individuals.

*Arithmetic Series* (6 strips, color; produced by McGraw-Hill Book Co., 332 West 42nd St., New York 36, N. Y.; \$32.50 per set). The problems of fractions, decimals, measurement and time-telling, percentages and the use of money are an essential part of learning to use numbers. This series is planned to aid in work with number concepts and the practical application of arithmetic to everyday life. Facts are presented in a plain, clear manner and arithmetical processes are shown in their relation to science, trade, personal budgeting and personal living. The material is closely correlated with problems encountered in grades 4 to 6 and will be found helpful when used with any textbook or lesson arrangement in these grades.

*Cat Stories* (3 filmstrips, color; produced by Curriculum Material Center, 10031 Commerce Ave., Tujunga, California; \$3.95 per strip). Anyone who likes cats, anyone who enjoys looking at pictures of cats, and anyone who likes stories about cats will like these filmstrips. *The Cat Who Meets a Wombly*, *The Cat Who Finds a Friend* and *The Cat Who Sleeps All Day* are delightful filmstrips. Actual photography is combined with art work to make the pictorial sequences appealing, and there is a warm sense of humor in the story presentations. This is something a bit out of the ordinary run of story material, it has story value, has a potential for language art work, and will satisfy the desire of younger learners for something that is good to look at and discuss. If we will use material of this type in our reading and story hours, it will help to build up a sense of appreciation for this work and encourage pupils to turn to other story material for enjoyment and for learning.

*Electing a President* (single strip, black and white, one of the monthly series produced by the Educational Dept., New York Times, 229 West 43rd St., New York, N. Y.) The fact that we face a presidential election this November makes a filmstrip such as this of value in social studies classes and for civic groups. This particular strip, which is the May, 1960, unit of the series, traces the process by which the citizens of the United States set about electing a president. Nomination, election campaign, manner of voting, the electoral college and the final result are all presented and discussed in some detail. The strip will help to visualize the election process and serve as a good basis for reading, class discussion and consideration of the American system of gov-

ernment and the manner in which our people participate in carrying out the American form of living. It is probably best suited to junior and senior high school work.

*The Atlantic Region* (2 filmstrips, color; produced by The National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, New York; \$5 per strip). Subtitles of the two strips here considered are *From The Sea* and *From Mine and River*. As the teachers' guide tells us, the atlantic region of Canada provides from 55 to 60 percent of the total

fish caught, and is also one of the oldest mining regions in this same country. The picture gives us a good idea of what both industries mean in terms of national wealth, activity and industry. They are also good for schools in this country, for conditions are similar and both fishing and mining are a vital part of the life of this country. We see how modern fishing and mining methods are put into operation and how men in both occupations set about their work. Good clear factual presentations, with value for social studies units.

## PHILCO advances the science of visual education

### WITH NEW TRANSISTORIZED CLOSED CIRCUIT TV SYSTEMS

Visual education, through the use of closed circuit TV, is being adopted rapidly by schools throughout the nation. Philco's broad experience in educational TV is your assurance of obtaining the greatest flexibility and economy. Famous for Quality the World Over

# AV in the Church Field

by William H. Hockman

## Reaching The Shut-Ins

Many churches would like to get the church services to the home-bound people of the congregation, and many approaches to the solution of this problem have been tried. Would you be interested in our present plan?

In our church this work comes under the Board of Deacons and its arm-of-service is the Christian Service committee. When the CSC sat down and looked this problem over it ran head-on into certain fixed things: (a) the shut-in wanted to hear the entire service; (b) the shut-in was old, in most instances, and wanted to talk with the caller and not listen at *that* time to something which he/she had brought; (c) the home-bound person did not want to receive the church service through any hard-to-operate equipment; (d) they did not want to listen just once but several times; and, (e) they wanted to listen when they were in the mood, and able to, and not when it was convenient for some caller to stop by.

This is a tough order to fill! But with these factors in mind we went to work.

What about a portable tape recorder? We had already installed in the sanctuary a good professional-type tape recorder so there would be no problem at all in transferring services to the smaller recorder. But our real problem was at another point. First, the tape recorder was too 'hard' for these older people to operate themselves, and to reach our shut-ins we would need three or four of them in operation at the same time, pushing our investment in equipment above our limits (so we thought).

Then we checked into a short-wave radio system, with receivers in the homes of our home-bound people. This had possibilities, but the initial cost and the trouble in operation soon eliminated this from further consideration.

About this time we discovered another factor: Some of our aged could not see to read any longer. How could we serve them? We knew that portions of the Bible had been put on records and in this medium could be utilized by many of our people.

This brought us back to records and to a portable record player which could be taken to a shut-in and left

there to be played at her convenience. Now we seemed to be on a rather promising track. All we had to do now was to get the taped church service onto records. Could that be done—within our budget—and would the 'cut' records have a lifetime of usefulness sufficient to justify their production?

We soon found a local firm which would transfer our tapes to records for \$7.50 per record. They could squeeze on to each side about 22 minutes of running time at 33 $\frac{1}{3}$  rpm. We felt we could afford this rate of expense and we set about to create our first "Shut-in Package."

It so worked out that the first 22 minutes of the service went on one side and the second 22, which would be the sermon, on the other. Naturally, something had to be left off, and it was the hymns that got cut, in some instances, to one stanza. At other times it was some other item.

Now, with our first record we only needed a light-weight phonograph record player, and we were in business. Finding it was no trouble, but we required one with a minimum of controls and considerable sturdiness.

For some weeks now this first Package (phono player plus two or three records) has been taken from one home to another by the Minister's Assistant who tells the Christian Service committee that she thinks we have hit upon just the right solution to a knotty problem. She finds that the Package needs to stay with a shut-in about three days, and that in that time it is played many times. She finds that they enjoy both the sermon and the rest of the service equally, but do not miss the parts that must be deleted to reduce an hour to 44 minutes on the record. To our surprise, the operation of the player was not beyond the feeblest if a little care was taken in explaining its operation, and if the record was not cut too close to the edge, making starting difficult.

It wasn't long before our worker ran into the request for the Bible on records. We then put into operation a set of the New Testament records from Audio Book Company, Benton Harbor, Michigan. These records have a speed of 16 rpm, a speed now available on many phono players. This brought not only the church service but the Bible to these people of failing sight, and their gratitude has been profound. This album could easily be divided into two parts, each to be included in a Package.

We are not certain as yet what the lifetime of one of these cut records will be. It is difficult, in the first place, to know how many playings they have received. Again, we find

The KEYSTONE Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Transparencies, Standard (3 $\frac{1}{4}$ " x 4") Lantern Slides, Polaroid Slides, and Hand-made Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2 $\frac{1}{4}$ " Slides, Strip Film, and Microscopic Slides.

It is useful —

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

that they get damaged by the playing arm being dropped, and by handling. We shall retire them when we believe their general condition requires it.

We do not tape every service, only those which we think will have especial appeal to shut-ins. During the coming year we expect to have in circulation throughout our parish of some 2,000 members at least three of these Packages in an effort to carry the worship and message of the church to a shut-in list of more than 70. As of now, we think we have met a significant challenge.

### Vocation Filmstrips

We seem to remember some findings to the effect that many young men and young women wind up in the vocation which interested them when they were about 13 years old or in the 8th grade. Now comes a filmstrip producer (Eye Gate House, Inc., Jamaica 35, N. Y.) with an 8-unit series entitled, "Let's Talk About Vocation," for a target audience of 10-15-year-olds. In the Master Study Guide they say "most children between 10 and 15 years old are not ready to make a realistic decision on vocation," but point out that all of them need to be thinking about it. And right here is where the church comes in: to deepen motivation and broaden perspective. This, and more,

this series has undertaken.

The eight titles and their length, and accent, are: *Phillip's New House*; 13-min.; under God's grace, all work is good and worthy. *Virginia's Day*; 15½ min.; vocation can begin when you are young. *Lucky Carolyn*; 16½ min.; planning a career in music, Carolyn is helped to see that even now she needs to share her God-given talent. *Mike's Decision*, 16 min.; Mike begins to see that after all he may have the courage it takes to be a foreign missionary. *Judy's Journey*; 19 min.; Judy is losing interest in school when a teacher helps her to see teaching might be a good vocation, and revives her interest in study. *Junior Businessman*; 16 min.; Jimmy sees that as a business man there are ways to serve God. *Patty Goes To The Hospital* and begins to see what being a nurse can be like; 18-min. *Heal The Sick* were just words which sounded good but did not mean much until a tour of a hospital reveals real suffering, and the great services performed by modern medicine.

It seems to me that this series is not only for the child but for his parents as well. After all, they stand close to his life; they have a deep interest in his vocational interests and choices, and they desire to help. With a new perspective and with new ideas, they can be helped to see vocation from the child's level-of-view.

What about quality? The color photography is excellent across the series. The color itself is right, and the photos are meaningful. The narration is a fine rendering by one voice of commentaries which have a dialogic and conversational structure. Here we wonder if straight narration might not have done as well, making possible somewhat fewer words with each frame. Yet, the producer is trying at all times to give us nuances of thought and feeling which require conversation. Withall, there is in the series a greater economy of pictures than of words, when leanness is more desired in the latter.

The commentary for the first two frames is the same for each filmstrip. This is good. It gives the context, the point-of-view; it orients the user. There is a Master Guide for the series and a Leader's Guide for each. They are well printed and helpful.

In my judgment the target audience is Junior and Junior Hi. This drops it a grade or two lower than the producer does. On some of these I'd be a little shy about using them with ninth graders and very cautious at the tenth grade level. However this varies with user, with the group, with the purpose and the setting. I am certain that most Juniors will find them to their liking. (Complete with scripts, four LP records, \$50.00 through your AV dealer).

Major denominations cooperate through the Broadcasting and Film Commission to bring you powerful, realistic motion pictures produced with professional skill and dramatic talent. BFC Films are designed for churches to meet specific church needs.

Photographed in India, Africa, and Thailand; this sound color film was produced specifically for the 1960-61 interdenominational foreign mission study theme—INTO ALL THE WORLD TOGETHER.

### HOUSEHOLD OF FAITH

Out across the world, Christians are becoming increasingly aware that they are one fellowship and share one faith. New patterns of missionary expression are evolving as Christians unite in their faith to cross denominational, racial, and national lines.

## Happy Little Hamsters

(Portafilms, Orchard Lake, Michigan) 13½ minutes, 16mm, sound, color or black and white, 1959. \$135 and \$75. Teacher's guide available.

### Description

*Happy Little Hamsters* is the amusing but warmhearted story of Naomi—her courtship, motherhood, and the raising of her family of eight children. It also gives unusual close-up views of the day-by-day development of a hamster litter from birth to maturity.

Naomi and Abdullah “fall in love” at first sight—or rather, first smell—and for a while they are happy. But like all adult hamsters after mating, they soon begin to have family spats. The quarrels get so bad that pretty soon Abdullah, who has been relegated to the role of a “hamster-pecked” husband, is taken away.

Several weeks later Naomi gives birth to eight healthy squirming babies each weighing about one-fifteenth of an ounce. Their skin is loose and transparent and their eyes and ears not fully formed. However, they develop rapidly, and in four days they begin to look like hamsters.

As the babies start to walk, they become quite hard to manage and feed. They scramble about blindly and delight in after dinner romps at the end of which poor Naomi is ready to drop from sheer exhaustion. In two weeks the babies’ eyes open, and since they have learned to eat solid foods by then, they eat everything in sight so that Naomi has to remind them that cedar chips are not for eating. Too, their fights, which they think are lots of fun, get on their mother’s nerves.

By the time the hamsters are three weeks old, they are tired of fighting as a form of exercise. They are more sure-footed and begin to show off in front of an appreciative group of children who love to watch their antics. The children have such fun with them that each child wants one for a pet.

The hamsters are now ready to leave their mama and go out on their own, so they are placed in neat, new cages. As the last child hamster leaves, Naomi feels sad, but proud, too, be-

cause these happy little hamsters will make a lot of children happy.

### Appraisal

Although designed specifically for children on the lower elementary level, the film, because of its unusual treatment, would appeal to people of all ages. The photography is excellent and the narration, along with a clever sound track giving human voices to hamsters, provides just the right amount of humor to keep audience interest high.

*Happy Little Hamsters* is authentic and most informative. It can be used to correlate with units on animal families and habits, value of animals to mankind, and care of pets. There is only one point which might have been more emphasized: the necessity of staying away from the young for a week after birth. Science and biology students would be interested in the day-by-day development of the litter from birth to maturity. They could also use the film as a springboard for discussion and study on individual similarities and differences in various animal families. The Humane Association might be interested in this film,

too, as well as parents who know little about hamsters and hesitate to let their child have one for a pet.

## From Generation to Generation

(McGraw-Hill Text Films, 330 West 42nd Street, New York 36, New York)  
Produced by Cullen Associates. 31 minutes, 16mm, sound, color, no date. \$225.

### Description

From Generation to Generation uses the continuous, natural pattern of nature's rhythmic, seasonal changes to form the matrix in which evolves the two interrelated concepts of the development of a new human life from fertilization to birth and the deep human love within a family that is

both the agent and product of the newly created life. Animation of an "impressionist character" is used to describe the female reproductive system, the development of the embryo and fetus and the birth of the infant. Live-action photography establishes both the seasonal design patterns and the feeling of deep affection within the rural family in which the mother is expecting her second child.

The story of the cyclic patterns of nature begins with the rolling surf at sunrise and moves on to panoramas of fields, woods, streams and ponds. Then close-ups of flowers and foliage establish the first season as spring. The film's total mood is revealed in, "The earth turns, day follows night, the seasons change, and an infinite variety of things unfold." Time-gaps are bridged by characteristically picturing the changing seasons.

The rural family of mother, father and young son provides the symbolism for each animated sequence. The unifying spirit of family love is apparent in family walks through the spring woods; in the warm affection of the husband when he learns they are to have their second child; in the wife as she holds her husband's hand on her abdomen to feel the movements of the new life; in the comforting calm gestures of the husband to his wife as she begins labor; and in the happiness apparent in the family, now four, as they again stroll through the spring woods.

Many cinematic techniques are used to bridge time or shift from one medium to another. The couple sowing the field precedes the description of fertilization by animation. Soft, silky thistle seeds are blown into the wind by the son. As these are fol-

**MICROTRAN** COMPANY  
Inc.  
Valley Stream, L. I., N. Y.

ved, the landscape changes from  
l to winter. The first cry of the  
wborn child signals the shift from  
imation, picturing labor, to a baby  
ing placed in the outstretched arms  
his mother.

Interwoven animation locates and  
cribes the functions of the female  
productive organs and the cycles  
which may or may not result in fer-  
zation. The actual union of sper-  
matozoa and the ovum, the hereditary  
es of chromosomes and genes, and  
e early cell divisions are graphically  
presented. Attaching itself to the  
erine wall, the embryo is surrounded  
the aminoic and yolk sacs, and the  
quence of development during the  
st 25 days is outlined.

Food and oxygen are supplied, and  
waste materials eliminated through the  
centa. Fetal movements are observ-  
within this structure. Labor stages  
e presented in detail with stress  
on the rhythmic sequences of mus-  
contractions.

In concluding, the mood is re-en-  
ced with the reflection that, "In  
s act of renewal the human race  
ads its confirmation."

#### Appraisal

From *Generation to Generation*  
ouples reverent respect for the human  
productive processes with an out-  
standing treatment of visual and ver-  
bal content to produce a film of po-  
tential classic dimensions. Not only  
es it present a comprehensive cov-  
erage of the female reproductive sys-  
tem and of the prenatal development,  
e additionally these concepts are  
presented in such a background of  
family love and natural expectancy  
at this is one of the few films of  
s type whose use should be en-

couraged with mixed groups of high  
school age and older.

Evaluators universally stated that  
it would be an excellent film to set  
the proper atmosphere for the study  
of human reproduction in biology and  
health classes on the high school and  
college level. Establishing this mood  
is done at only slight sacrifice of factu-  
al concept development and nomen-  
clature.

Some members of the preview com-  
mittee regretted the amount of time  
devoted to labor, the omission of the  
male reproductive system and the fail-  
ure to show in detail the stages in  
early embryonic development.

Others, however, indicated that the  
overall picture of embryonic and fetal  
development coupled with the inspira-  
tional values more than offset possible  
criticisms. Likewise they indicated  
that the use of this film as an intro-  
duction would set an atmosphere in  
which not only many other materials  
could be used to develop concepts  
omitted in the film, but the atmos-  
phere created would make presenta-  
tion of the concepts easier and more  
meaningful.

—Richard Gilkey

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to Directory of Sources, page 310. For more information about any of the equipment and materials announced here, use the enclosed reader service postcard.

## CAMERAS—Movies & TV

**Transistorized CCTV Camera**, cylindrical in design, 5½" diameter 11¾" long; withstands shock and noise without special protective housing; 650-line horizontal resolution; operates on only 18 watts input, provides 1.0-volt composite video output; works down to 1.0-footcandle scene illumination; circuitry uses only one tube. GECOMPRO.

## CAMERAS—Accessories

**Safe-look Speed Tripod** features 3-directional head. \$22.50. Heavy duty "Speed-pro" model, max height 68" from

## DON'T TAKE YOUR AUDIO-VISUALS INTO A DARK HOLE

You can now project visuals in normal room light!

Using new, modern LENSSCREEN rear projection screens, visuals are presented easily, efficiently. Audiences are alert and in full control of instructor.

For the first time in A-V history, here is a screen that meets the standards of modern education. Images are sharp, bright, true in color and contrast. Viewing is easy, at any time, with no loss of time, no interruption.

Send for complete kit of LENSSCREEN A-V Ideas—helpful, revealing. You'll be glad you did.

**POLACOAT Inc.**

9710 Conklin Road

Blue Ash, Ohio

closed length of 43"; pneumatic device controls 11" rise in center column. \$44.50. GRAFLEX.

## PROJECTORS—Movie

**Bolex 8mm Sound**, "Sonorizer" unit attaches to Bolex M-8 and some other 8mm movie projectors to add and play sound on magnetic-stripped 8mm film. The 30-mil stripe is added after the film is processed. Aperture to sound takeoff distance reportedly differs from that of the Fairchild and Eastman 8mm sound projectors previously announced. Wt. 28½ lb. \$250. BOLEX.

**Kalart-Victor Series 70** sound-on-film projectors offer choice of 15 watt in single or dual (Classmate) case models; also 25 watt, with inputs for two speakers, phonograph and microphone; and a console combination of motion picture and still projectors, 4-speed record player and tape deck, microphones, either 9" or 12" speaker, all mounted on a wheeled projection stand. VICTOR ANIMATOGRAPH.

## PROJECTORS—Still

**Flashlight Still Projector** operates on 6-volt lantern or 8 flashlight batteries, also on car battery or (with transformer) on AC line. Filmstrip only, with plastic lens \$24.95. Slides only, with Airequipt automatic changer \$29.95. (No combination model). Glass lens, add \$6.50. AC transformer \$7.95. Car battery connection \$1.95. Transistor radio-phonograph, operates on 4 flashlight batteries, \$49.95. MITCHART.

"PhD" Filmstrip-Slide Combination features spring lock framing; spin-back device speeds review and repeat showing; converts instantly to slides, 2x2 or bantam; 500w; 5" f:3.5 lens. Ties into 4-speed, single-case phonograph-amplifier, complete \$169.50; phono-

graph-amplifier, complete \$169.50; phonograph alone \$80. VICTOR ANIMATOGRAPH.

**1200-Watt Slide Projector**. New model "Selectroslide" features 1200-watt lamp. Show up to 48 slides, continuously, automatically; matched condensers for lenses from 1¼" to 12", front-surfaced reflector. Also new 750-1000 watt model. SAUPPE.

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50. With guide, \$7.80.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, black-and-white, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, full color, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**The Glass Slipper**—The charming fairy tale of *Cinderella*, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50. With guide, \$7.80.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$4.00.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Shakespeare Series**—Eight black-and-white filmstrips dealing with Shakespeare's life, theatre, and plays. Each of the filmstrips on his plays is made from photographs taken from a photoplay, presenting a complete synopsis of the play, **Introduction to William Shakespeare** (40 frames); **Shakespeare's Theatre** (43 frames); **Hamlet** (62 frames); **Macbeth** (45 frames); **Romeo and Juliet** (62 frames); **A Midsummer Night's Dream** (53 frames); **As You Like It** (50 frames); **Henry V** (42 frames). Set of 8 filmstrips—\$28.00. Each filmstrip—\$4.00.

# Michigan professor uses Argus TV camera to teach TV instruction

Edward Stasheff, Professor of Speech at the University of Michigan, explains:

**NOW JUST \$595\***—the cost of a movie projector—can bring your school closed-circuit television. This new Argus Direct-Wire TV Camera transmits a clear, vivid picture with ordinary room light. It telecasts up to 1000 feet through standard co-axial cable. It hooks up to any TV receiver without interfering with regular reception. It can produce the same picture on several receivers at once, or as many as four cameras can be channeled to a single receiver. It costs about one third as much as other closed-circuit TV cameras.

*\*price includes 1-inch, f/1.9 lens; telephoto and wide-angle lenses available at modest extra cost*

**argus**  
GENERAL TELEPHONE & ELECTRONICS 

"For my course in TV production, I need a camera that is compact and easy to move between studio and classroom, yet gives me sharp, clear results."

"The Argus Direct-Wire TV Camera gives me the picture quality I need with nothing more than normal room light."

"It attaches to any TV receiver, warms up in just five minutes. And you don't have to be an engineer to operate it."

Available for purchase under the  
National Defense Education Act.

## The Authors

Dr. Bathurst is associate professor of education at Fresno State College, Fresno, Calif., teaching elementary and audiovisual education. He has presented the material in this story to several of his classes at the college and university level and says he has found reflected there the growing interest in building map reading abilities of the young.

Helen Carlton is audiovisual coordinator at St. Petersburg Senior High School, St. Petersburg, Fla. She is an old friend of *EdScreen and AV Guide*; for another of her light but deft contributions see the issue of March, 1956.

Samuel Rubinstein is an instructor at Junior High School No. 104 in New York City.

## AO OPAQUE DELINEASCOPE

### LIGHTER AND BRIGHTER

AO's New High Speed Opaque Delineascope projects a brighter image than any other opaque projector. Improved, large-diameter, coated projection objective delivers a full 145 lumens to screen. You have clearer image definition in tone, contrast and detail... from edge to edge, from corner to corner of the screen. And, it's lighter than ever... only 29 lbs.

### RIGHT SIDE CONVENIENCE

New, modern styling and design places all adjustments on the right side of the instrument... where they belong. You operate switch, focus knob, optical pointer and handy roll feed... quickly and easily. Extra deep copy platform positions and locks instantly at any desired level... accommodates material up to 2½ inches thick. Every detail has been planned for your convenience.

### SERVICEABILITY

Large hinged access door makes it easy to replace bulb and clean reflecting mirrors. All-glass reflecting mirrors will not tarnish or deteriorate. AO's exclusive glass reflecting surfaces plus sturdy "unitized" construction assure projection precision that will withstand vigorous classroom use. You can be sure that your AO Opaque will still produce the brightest screen image, even after years of service.

# AV industry news

#### EBF T/Mc Programs

Encyclopaedia Britannica Films, Inc., has started production of "programs" for use in self-instruction teaching machines. Initial subject areas now ready are high school and college math and foreign languages, the latter with an "added audio component"—a pre-recorded tape cartridge" containing key sounds and phrases which are fed to individual student earphones on cue from the printed program." The EBF "Tcmac" programs are expected to be available soon in two forms (a) for the teaching machine and (b) the programmed textbook, "a unique kind of book which also provides a sequential, organized presentation." Next in line for "program" treatment are similar factual subjects such as English grammar and spelling and Latin.

#### Animation Workshop

More than 100 artists and technicians representing 70 firms and organizations attended a 4-day workshop in film animation techniques sponsored by Florman & Babb June 12-15 at New York's Trade Show building. Film producers and advertising agency executives were the panelists who carried the course from idea to storyboard to camera and eventually to audience.

Warren Portman, designer of the stand used at the workshop, led several sessions; a trip was taken through the Du Art lab; and Arthur Florman outlined the possibilities of low budget in-plant and small studio animation

Ernest Pittaro, Dancer-Fitzgerald-Sample, Inc., talks on animation techniques.

production. The technical up-grading and business building potential of this first animation seminar augurs similar events in the future.

## Front and Center

In the impressive 96-page Chapman study, "Design for ETV," published by the Educational Facilities Laboratories in the course of its work under a \$4.5 million dollar Ford Foundation grant, there are 13 reading references suggested under the heading "Audiovisual Teaching Techniques and Equipment." Five of the 13 are from *Educational Screen and Audiovisual Guide*, four feature articles and our

annual *Blue Book of Audiovisual Materials*. The remainder: Eastman Kodak publications, 3; National Education Association, 3; Ozalid, 1; Modern Language Journal, 1.

## M.R.I.A. Elects

Officers of the Magnetic Recording Industry Association for the coming year are: president: Herbert Brown, Ampex; vice president: Kenneth Bishop, Bell Sound; treasurer: Charles Murphy, Michigan Magnetics; secretary: Herman Kornbrodt, Audio Devices. Board members: Hugh Daly, Magnecord; Victor Miller, V-M; Irving Rossman, Pentron; Harry Sussman, Telectro; E. Wallerstein, Everest Records.

Wertheimer at left, with Mr. and Mrs. Feldman at their plane.

## Wertheimer Back, Feldman Away

Adolph M. Wertheimer, executive vice president, Radiant Manufacturing Co., returns from European sales trip in time to see off his sales vp, Herschel Y. Feldman, on a similar trip to Israel and south European cities.

## U.S. Films Festival-Bound

The Committee on International Non-Theatrical Events (CINE) has chosen 39 non-feature type films as entries in the 1960 International Film Festivals in Venice, Edinburgh, Berlin and Vancouver. Four are university-produced; Churchill-Wexler landed two of its pictures on the list. Anna L. Hyer, executive secretary of DAVI-NEA and CINE coordinator, credits the success of U. S. entries during the past two years to the high standards set by the CINE screening group.

## DAVI at Miami Beach

The Department of Audiovisual Instruction, N.E.A., is calling for commercial exhibits at its 1961 meeting at the Deauville Hotel, Miami Beach, Florida, April 24-28. Most booths are 8 x 10 ft., a few larger, some smaller. Rates range \$190 to \$225.

## GE's Large-Screen TV

Although not yet marketed commercially, General Electric's large-screen TV used at the nominating conventions offers hopeful prospect of effective large-group use of the medium. An oversize rear-projection screen about 35 feet behind and 55 feet above the speaker's platform allowed everyone in the great convention halls to have a clear view of the speaker, and hook-

# THE CLASSROOM TEACHER REMAINS IN THE CENTER OF THE PICTURE AT CORONET FILMS

Why do  
teachers overwhelmingly  
prefer  
Coronet films  
to all other  
educational  
motion pictures?

*...Because Coronet films have been produced  
solely with classroom requirements in mind!*

Even in brief screening sessions, teachers are quick to recognize that Coronet films are designed to make optimum use of limited time... to reflect basic educational concepts... and to correlate precisely with the curricula and textbooks which are the teacher's guides in daily instruction.

As she strives to make her classroom a vivid, rich center of learning, the teacher considers it an obligation to restrict her use of materials to those, like Coronet films, which help her do the most effective, specific teaching job.

Her enthusiastic approval of Coronet films is substantiated by facts. Coronet is the *only* producer with a research-script department which analyzes, unit by unit, state-approved curricula and appropriate related texts to determine fundamental guideposts for scriptwriters and film makers.

The result?—films which *truly* correlate to what is being taught... exactly and specifically.

*You may wish to investigate for yourself why Coronet films are teacher-preferred. We shall be pleased to send you a handsome, new chart correlating more than 100 science films for grades 4-6 to 30 widely used textbooks (from which you may make preview selections at no obligation) and other literature telling the complete story of Coronet Films. Merely send your request to:*

## **CORONET FILMS**

to the deaf through schools, organizations and other groups along lines similar to the federal Braille and Talking Books programs for the blind.

**Realist Moves**

Realist, Inc., has moved its manufacturing facilities from Milwaukee to Berlin, Wisconsin, and its general offices five miles north to Menomonee Falls, Wisc. The address: N93 W16288 Megal Drive.

**Appointments at EBF**

Joseph E. Dickman has been promoted to manager of special projects, such as promoting the utilization of Encyclopaedia Britannica Films' complete science courses on film. His place as southwest manager will be taken by Grant Halladay whose Canadian assignment goes to Lael Carter, now in Ohio. Elliott Newcomb is named head of the federal government division. Raymond P. Kroggel, northeast district manager, is upped to vice president in the same territory.

Recent New York demonstration of high speed slide production as described below.

**Shot to Screen In 18 Min.**

Black-and-white 35mm slides photographed at an AV meeting in New York were projected on the screen 18 minutes later and were available in quantity for immediate delivery.

The original negatives were processed in 6 minutes in Cormac's "Unibath CC-1," dried in 2 minutes in their "Unidri," printed on Kodak High Contrast Copy Film by electronic flash in the new Heiland "Repromar" copy

**Test Films to SMPTE**

camera, processed in 3 minutes, dried in 2, and mounted and projected on the screen in another 6. Any number of duplicates could be made at once.

The Society of Motion Picture and Television Engineers has taken over the motion picture test film program formerly administered by the Motion Picture Research Council, recently dissolved.

**NEW BONUS RECORDED TAPE**

Some of our greatest popular songs — "Full Moon and Empty Arms," "Till the End of Time," "Stranger in Paradise" — took their melodies from the classics. Eight of these lovely themes — in their original classical setting — are the basis for "Classics that Made the Hit Parade."

This unusual program, professionally recorded in sparkling full fidelity on Audiotape, is available RIGHT NOW from Audiotape dealers everywhere. (And only from Audiotape dealers.) Don't pass up this unique opportunity to get a fine recorded tape at a bargain price.

**audiotape**

Manufactured by **AUDIO DEVICES, INC.**  
444 Madison Ave., New York 22, New York  
Offices in Hollywood & Chicago

**DETAILS OF THE PROGRAM**

- Borodin . . . . . Polovtsian Dances from Prince Igor (Stranger in Paradise)
- Tchaikovsky . . . . . Symphony No. 5 in E (Moon Love)
- Waldteufel . . . . . Espana Waltz (Hot Diggity)
- Chopin . . . . . Polonaise No. 6, in Ab Major (Till the End of Time)
- Tchaikovsky . . . . . Symphony No. 6 in B (The Story of a Starry Night)
- Rachmaninoff . . . . . Piano Concerto No. 2 in C Minor (Full Moon and Empty Arms)
- Chopin . . . . . Fantasie Impromptu in C# Minor (I'm Always Chasing Rainbows)
- Tchaikovsky . . . . . Romeo and Juliet Overture (Our Love)

**DETAILS OF THE OFFER**

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains one 7-inch reel of Audiotape (on 1½-mil acetate base) and the valuable "Classics that Made the Hit Parade" program (professionally re-

corded on Audiotape). For both items, you pay only the price of two reels of Audiotape, plus \$1. And you have your choice of the half-hour two-track stereo program or the 55-minute monaural or four-track stereo versions — all at 7½ ips.

See your Audiotape dealer now!

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Knights of the Round Table**—A set of two filmstrips. Part One, black-and-white, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, full color, 28 frames, tells the story of the great legend, based on the M-G-M photoplay. \$7.50.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

*Send for complete catalog.*

## University Film Producers Meet At Williamsburg

Producers of educational and documentary films from colleges and universities met August 7 at the College of William and Mary in Williamsburg, Virginia, for the 14th Annual Conference of the University Film Producers Association. Host for the affair was the Film Production service of the Virginia State Department of Education.

Representatives of the major motion picture equipment companies were on hand to demonstrate the latest in movie making equipment.

## Prizes Awarded in Farm Film Foundation Show

Richard G. Turner, visual aids technologist at the New York State College of Agriculture, Cornell University, Ithaca, N. Y., won the Farm Film Foundation's 1960 Professional Improvement Award. Mrs. Edith Bennett of Washington, D. C., executive vice president of the Foundation, pre-

sented the winner with a Certificate of Award and a check for \$500 on July 18 at the annual meeting of the American Association of Agricultural College Editors being held at Oregon State University.

Kirby Brumfield, information specialist at Washington State University, Pullman, and Hays L. Fisher, senior photographer in the Agricultural Extension Service at the University of California, Berkeley, both received honorable mention certificates and checks for \$50.

## Indiana U. Conference Evaluates Airborne TV

An Airborne Television Conference and Workshop was held at Indiana University, June 27 to July 1. Over 600 educators from the project's area and from several foreign countries attended the first two days of the conference and 71 took part in the full five-day workshop.

Speakers and resource persons brought to the conference included John E. Ivey, Jr., Harold B. Cores, I. Keith Tyler, Gerald F. Winfield, Miss Martha Gable and Edgar Dale.

Airborne telecasts will begin on a six-month trial basis in January, 1961. The following September, for six hours a day, a full academic year of telecasts will begin from a plane flying over Montpelier, Indiana. Courses will be offered in elementary and high school subjects at a frequency of two to four times per week.

## Plan Florida TV Institute For Medical Administrators

On October 28 and 29, 1960, the Council on Medical Television will present "Teaching with Television: An Institute for Medical Educators."

This is a tuition course designed for educators and administrators who have expressed interest in acquiring more information on television fundamentals. These sessions and small group demonstrations will be taught by educators actively using television, and illustrated examples will be drawn from among the 23 medical schools now using television for medical education and research.

The first day of the Institute, Friday, October 28, will be held at the University of Florida College of Medicine in Gainesville. On Saturday morning, October 29, participants will board a chartered bus for Jacksonville

### Cover Scene

Ah, 'twas ever thus . . . a fella just can't enjoy himself on the way to school on a beautiful September morning. Only a half-hour late and you get the old what-for from the schoolmaster.

Of course, this scene goes back about 250 years. *Education in America: The 17th and 18th Centuries* is a 16-min. production of Coronet Instructional Films.

where Dr. Max Michael will demonstrate the use of an open-circuit "scrambled image" TV system as an aid to graduate and postgraduate education. This presentation will employ the microwave link connecting Jacksonville with the medical school at Gainesville.

## NEA Departmental Status Voted to School Librarians

In action taken at its annual conference in Los Angeles, the National Education Association voted departmental status to the American Association of School Librarians, June 30,

## WHEELIT

IS ALWAYS READY!

—ready to use  
—ready to move  
ANYWHERE!

Saves time and effort in transporting projectors, amplifiers, tape recorders and other heavy equipment from room to room, floor to floor, building to building. Beautifully designed. Perfectly balanced. Precision engineered. Durably constructed.

### Folding and Non-Folding

Folding type Wheelit fits easily into auto trunk, with ample room for other equipment. Non-folding model for interior use. Either may be locked in stationary position to serve as projection table. Prices—\$29.95 to \$79.50.

See your supply dealer or write Dept. EP

**SKYLIGHT**

Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

1960. The 5,000 delegates who make up the representative assembly, the policy-forming body of NEA, approved the action by which AASL becomes an NEA department while continuing its status as a division of the American Library Association.

Headquarters of the AASL will remain at the American Library Association in Chicago with Eleanor Ahlers as executive secretary of the division. A staff member of NEA, as yet unnamed, will act as liaison between the two groups.

### U. of Chicago Lab School Appoints Field Coordinator

A field services coordinator has been appointed for the laboratory school of the University of Chicago. This new position was created primarily, it is said, because of the problems involved in arranging field trips for large numbers of students.

The major responsibilities of the field services coordinator, according to the university, will include arranging transportation, making contacts

at the places to be visited, preparing proper release forms, and securing materials to be used in planning the trip with the students. In some cases the coordinator will meet with the group prior to the trip and discuss the geography or culture of the area to be visited. He will also document the trip photographically if the resulting materials could be of instructional value to the teacher involved.

About 80 trips off campus for the lab school were planned for the coming year. This is about three times as many as had occurred prior to this service. A resource file is gradually being developed for use as a reference for the teachers.

#### Two AV Books Available

Educational Screen has a limited supply of two volumes, *Picture Values in Education*, and *Comparative Effectiveness of Some Visual Aids in Seventh Grade Instruction*, both by Joseph J. Weber. One or both are available upon written request at a cost of one dollar each to cover postage and handling.

## The Passing Parade in Educational Screen

### 10 Years Ago

A coordinated schedule of the tional Audio-Visual Convention, Chicago's Sherman Hotel, July Aug. 2. . . . Film Council of America senate meeting. . . . EFLA general sessions and six group meetings, also joint meetings with FCA, NAVA, the Midwest Forum on Audiovisual Aids. Speaker: Roy E. Larsen, president of TIME, Inc., and chairman of the National Citizens Committee Better Schools. . . . Seerley reported 27,257 sound motion picture projectors in 24,314 U. S. high schools. . . . James Card, of Eastman Kodak and George Hamilton, Keystone Visual Co., wrote about early equipment

### 20 Years Ago

Editor Nelson L. Greene reported 605 "judges" in 36 states individually evaluated 1807 different educational films after actual use with classes. The new zonal plan for DVI-NEA tended to put every teacher within easy travel distance of the annual zone meeting and anticipating a percent increase in membership (400). . . . Continuation (18th installment) of A. E. Krows' history of "Motion Pictures—Not for Theatres." Report by E. C. Waggoner and Cochran on the second Midwest Forum on Visual Teaching Aids. Query, by J. E. Hansen, "Where are we going in visual instruction?" Chicago schools buy 40 more motion picture projectors bringing total to (sound and silent), also \$8,000 worth of Eastman, Yale and Erpi films. A 4-page, 4-color SVE advertisement of Kodachrome slides.

### 30 Years Ago

The National Academy of Visual Instruction (Ellsworth C. Dent, secretary) announced a directory of more than 1,000 directors and producers of visual aids throughout the United States, price \$1, free to members. . . . The NEA Department of Visual Instruction's meeting at Columbus, Ohio, had as topics "Citizenship Learning as a Vital Value in Education" and "The Art of Living: A Vital Value in Education." J. C. Hollinger, president; F. C. Deane Clusky, vice president; B. A. A. baugh, local arrangements chairman.

## A New Concept in Language Training— TUTORETTE

TUTORETTE, a complete, closed circuit language lab. for individual or group instruction, is a compact, light weight, practical and economical language training unit. TUTORETTE adds amazing LSP (Live Sound Playback) to all standard language records.

LSP LIVE SOUND PLAYBACK lets students hear their own voices repeating the recorded material through the individual LSP microphone-earphone system. TUTORETTE is a 12 watt, true high fidelity, 4 speed record player and PA system. Ask your dealer about TUTORETTE.

# The Ultimate Up Until Now

*Paul C. Reed*

We've never actually seen a learning room completely equipped for the automatic audiovisual presentation of information and ideas, but we hope to! We've seen it already, almost, and what we *have* seen may well signal the most sensational advances of the next decade in the adaptation of space and equipment for audiovisual presentations.

The ultimate up until now in rooms for audiovisual learning is in the new Reception Center of Eastman Kodak's headquarters offices in Rochester, New York. In these conference and meeting rooms, groups that are assembled to learn can be multi-sensationally impressed in such a way that learning is practically inescapable.

In these rooms total control of a complete array of audiovisual facilities is at the fingertips of the instructor or communicator. Stereophonic or monophonic sounds come from ceiling and wall speakers. The amount and placement of light can be accurately related to the needs of the moment. Screens position themselves appropriately for various still or motion picture projections. Wide screens appear when needed for projection of wide pictures or when two or three standard pictures are to be projected simultaneously. All audiovisual equipment, and in effect the total room environment, responds instantaneously to the will of the leader.

Educators who have been privileged to experience the demonstrated use of these presentation-facilities, (and you, too, could be so privileged), are inspired to imagine the changes that could take place in their traditional schools and colleges if instead of classrooms they were to create *learning rooms* for maximum audiovisual impact. They recognize that this isn't a simple matter of copying a blueprint, but that there are fundamental concepts here to be applied to every learning situation.

The Kodak rooms were not designed as model rooms to be copied. Nor were they planned to sell equipment or materials. Actually they evolved over a period of years as various departments strove to provide training and presentation facilities that would be most effective and most efficient in the use of time and personnel. But there is stimulation here for all educators and especially those seriously concerned with creating environments and using methods based upon sound psychological principles conducive to maximum learning.

But the ultimate is only until now. Change is the order of the day and of the decade of the sensational sixties that lie ahead. For instance, it would be but a simple step to automate completely to audiovisual presentations in learning rooms like those at Kodak. Human fingers can make mistakes and push wrong buttons. Fingertip control might better be replaced by completely automated electronic controls. If something as complex as a television station can be programmed for a full day with completely automated controls, why not an audiovisual presentation room, with complete and pre-planned presentations of ideas and information automatically controlled and readily available to learning groups as needed.

Let no one misunderstand, however. We well know that such presentations, audiovisual and automated, would not be teaching. Teaching is much more complex. But an important aspect of teaching is the presentation of ideas and information. Too much current teaching still relies too much upon the teachers' spoken words and the reading of the textbook for the presentation of information.

The great educational advances of this coming decade will be in the direction of freeing teachers to perform better those aspects of teaching only humans can do. Automated audiovisual presentation could be one of the giant steps.

At the new Monroe Elementary School, Monroe, Iowa, selected by A.A.S.A. for its exhibit of outstanding school designs, R. J. Hekel, Superintendent, says:

## “We’re convinced that A-V increases learning efficiency by 20 to 30 percent.”

“Even slow learners grasp meanings quickly when they see a subject in context.

“After showing a movie on rural fire prevention, for example, nearly every pupil readily understood basic concepts of the subject. Before A-V, it was a slow process, sometimes tedious, to drum home the same subject.

“We frequently show movies—and we take care to see that they add to the learning experience.

“To show our movies, we selected the quietest, easiest-to-operate 16mm sound projector we could find—the KODAK PAGEANT PROJECTOR.

“Its quiet operation is not distracting, and we usually don’t have to show a new teacher or student more than twice how to operate it with ease. This means we don’t

have to lose valuable class time.

“We must move our projectors about the school, so we don’t like cumbersome, heavy machines. This Kodak Pageant is as light as any we’ve seen. And we know there’s good reason for this projector’s weight. For instance, from our examination of the sound amplifier, we found this to be a quality sound system, obviously not skimped on in manufacture. This sound quality is exactly what we need to accommodate showings in either classroom or auditorium.”

*Test the Kodak Pageant Projector yourself. See how easy it is to set up, how quietly it operates. Call your Kodak A-V Dealer for a demonstration, or write for Pageant Bulletin V3-22. No obligation, of course.*

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N.Y.**

# A-V Show Draws Crowds, Sets Records in Chicago

See the October issue of Educational Screen and Audiovisual Guide for added features on the National Audiovisual Convention and Exhibit.

**T**HE final tally for the 20th annual National Audiovisual Convention and Exhibit showed 3,170 registered in attendance. This exceeded advance estimates, and surpassed the 1959 show by 23 percent.

Those attending the big show at the Morrison Hotel in Chicago, August 6-9 represented users, producers, equipment manufacturers, and dealers of non-theatrical motion pictures, film strips and recordings for teaching and selling.

Harvey W. Marks, partner in the Visual Aid Center, Denver, Colorado was elected president of the National Audio-Visual Association. Marks was installed by outgoing president W. G. Kirtley of the D. T. Davis Company of Louisville, Kentucky, who now becomes chairman of the NAVA board of directors.

Mahlon H. Martin, Jr., M. H. Martin Company, Massillon, Ohio, was installed as first vice president, and Harold A. Fischer, Photosound of Orlando, Orlando, Florida, was made second vice president of the association. Robert P. Abrams, Williams, Brown & Earle, Inc., Philadelphia, Pa., and Earl Harpster, Harpster Audio-Visual Equipment, Inc., Cleveland, Ohio, were

elected secretary and treasurer respectively. Each of the officers will serve a one year term.

Marks, former first vice president, was general chairman of the convention.

The keynote speech of the convention was presented by James W. Hulfish, Jr., Fairfax Virginia, director of information of NAVA. Using three slide projectors and tape recordings and a "wide screen" Hulfish described the development of the audiovisual industry and delivered a prediction of the future of the use of audiovisuals in the next decade.

His presentation featured recorded interviews with a score of men and women prominent in the audiovisual fields of business, education, religion, medicine and manufacturing.

Discussing the growth of the AV industry Kirtley said that "the audiovisual field represents an investment in excess of \$2.5 billion in the United States since World War II."

"The annual dollar volume," he said, "was estimated to be over a quarter-billion dollars in 1958 and in 1960 is expected to pass the \$300 million mark."

"The most dramatic growth is taking place in education, where expenditures have been accelerated as the direct result of the National Defense Education Act of 1958 which channels federal funds to the purchase of instructional materials," he said.

The one-half mile of audiovisual exhibits located

Officers of the newly formed National Audio-Visual Association of Canada (NAVAC) are back row, from left): Peter Allinger, Vancouver, B.C., regional director; Marvin Melnick, Winnipeg, Man., vice president; Ben Elkinson, Montreal, Que., director; Ray Guthrie, Hamilton, Ont., treasurer; (front row) Gordon Stewart, Toronto, Ont., director; George Gibson, Toronto, president; Arch Stewart, Toronto, secretary.

ed on three floors of the Hotel Morrison were valued in excess of one million dollars. This was the largest display of audiovisual equipment and material ever assembled at one time under one roof.

The four day program included an Audio-visual Educational Forum on such topics as Teaching Machines, Do Teachers Know How to

Use Audiovisuals, and the School Library.

Participating groups which held meetings during the convention were: AV Workshop for Industrial Training Directors, Industrial Audio-Visual Association, AV Conference of Medical and Allied Sciences, and the Department of Audio-Visual Instruction, NEA.

Official announcement of the election of Harvey W. Marks, Denver, Colo., as president of the National Audio-Visual Association was made August 8.

James W. Hulfish, Jr., NAVA director of information, shown delivering the keynote presentation on August 6 at the convention in Chicago.

Jerrold Kemp, left, and Raymond Litke of the Audio-Visual Center, San Jose State College, San Jose, Calif., present "Selling to Industry" at the convention's first general session on Saturday, August 6.

# Developing Map Reading Skills

by Leonard H. Bathurst

**I**F maps are to be used effectively in the classroom, it is essential that the students have a complete understanding of maps. The reader of a map must know that it is a "bird's eye view," drawn with lines, of a given area or section of the earth. This may be a relatively small area or it may include the entire surface of the earth. With few exceptions, a map is not a photograph nor is it a realistic view of the area represented.

The skills required in reading maps should begin with children in the primary grades. There is great need for developing map reading readiness. The writer has observed first grade children working with and understanding simple maps that had been made in the classroom. "Map" is part of the vocabulary of six-year-old children. At times these children will draw checkerboard lines on drawing paper and describe their "map" with no prompting from the teacher or parent. This map reading experience is similar to word reading or picture reading experiences which children begin to have prior to entering the first grade.

Teachers must realize that map reading, like word reading and picture reading, is a developmental continuing process which requires several skills. It must be understood that all skills and understandings are not grasped during a single concentrated lesson on map reading. Many lessons and years of growth will be required for mastery of map reading skills.

The major concern of this article is in the area of understanding the types of maps used in the schools throughout the United States and Canada. The writer is not concerned at this point with more specialized maps not normally used by students in school situations.

This proposed method of introducing map reading is based upon known facts about learning. Since the writer does not know each teacher's class (its capabilities, experiences, etc.), some variety may—at times necessarily—be entertained at the discretion of the classroom teacher in order to make his or her teaching more effective and interesting for the students.

To first grade children, the school-home community is the world which they study and attempt to understand. This "world" is usually studied as a segment of their social studies curriculum. They will devote many hours studying and understanding this community.

The study of maps could, and perhaps should, commence during this first school year. The students take many excursions about the school grounds and the surrounding streets. These trips are considered an essential part of the reading readiness and social studies program. While the children are creating this common denominator, they may very well be preparing themselves for an introductory study of map making and understanding.

The teacher's responsibility would be to direct the attention of the children to the important sites that will assist the children when they begin map construction. Some of these sites would in-

These photos, provided through the courtesy of A. J. Nystrom & Co., illustrate steps paralleling those described in the story. Here, a more advanced class studies a 'linoleum map' of the United States.

clude the principal streets and avenues, service stations, prominent homes, traffic signs, fire stations, the post office, grocery stores, barber shops, mail boxes, open fields and lots and other "landmarks" in the community.

Along with discussions of these sites (not all at one time), directions and relationships would be observed and discussed in the classroom as well as in the field."

Colors are learned and used by the children. The many structures they see will have color (Bobby's home, the fire station, the stop sign, etc.). These colors will be used as the map is constructed and may help the children to remember the location of certain landmarks.

In the spring of the school year, after many trips and discussions, the class should be ready to begin a map construction project. This social studies unit should be introduced as interestingly as any other unit. If the group is not yet ready for the project, the teacher should postpone the unit until a more suitable time.

Rather than waiting for the children to become ready, the teacher will be evaluating the class, plus his or her own techniques and weaknesses. Using the results of the evaluation the teacher would strive effectively to assist the children in gaining a deeper understanding of their school-home community.

The children would need to realize that because of the size of the real community it would be impossible to bring it into the classroom. The teacher might have the children name other objects which would be too large to bring into the classroom. The class would discuss symbols by which the objects could be shown in the school room. Photographs, models or drawings of these objects are brought to the schools to represent the real object. The teacher would explain that a map is a drawing or model of the area which it represents.

"We will make our map look as much like our community as we can," is the idea to have the students accept, desire and discuss.

During the discussions the group would be integrating the language arts and social living program into the map unit. Art abilities and small muscle skills would be required to construct the buildings of construction paper. Making signs, lettering streets, addressing homes, drawing pedestrian crosswalks, etc., will require skills which are being developed by these youngsters. Safety rules and habits may very easily fit into this unit. The proper way to cross a street, the shortest, safest way home from school, to the store, etc., may be practiced on the map and discussed in the class and out on the streets. Teaching boys and girls to observe is very important at any age level and is often neglected during the educational experiences of the children. The teacher would be expected to continue to teach good work habits and study habits while initiating this unit.

The next step, in this method of teaching map construction and reading, consists of setting aside a section of the classroom as the map corner. (An area approximately 9 x 12 feet on the floor may work very well). Some first grades have a linoleum play area in their classroom. If such is the case, the reverse side of the floor covering (to

When this class arrived at a study of the southwestern regions of our country, they wanted to construct their own sand table desert, complete with small desert plants contributed by the local florist.

... And fifth graders build their own 3-D table map to present a true-to-scale (almost) presentation of their community. The teacher is careful to confine his activities to that of passive overseer, answering questions as desired. Note the wall map used as guide.

eliminate distractions) may serve very well for the map. With a linoleum, the map has a natural boundary line which could be helpful.

After the teacher has planned the "layout" of the map in advance, the class, using chalk or tempera paint, would draw a street which would represent the street in front of the school building. The nearest intersection could then be drawn.

The streets on this floor map should be wide enough for the children to walk on without touching the buildings which will be placed on the map. (The width of the streets should be considered during the construction of the "homes" so that the scale is fairly accurate.)

After the first intersection is placed on the map, it would be feasible to place the school building on the proper site. This would provide a point of orientation from which the children could continue developing the map. The child living nearest the school could then place his "home" on the map. If it is necessary for him to cross a street, it may be important to draw in another street. The children would be visualizing the boy's actions because they know where he lives. The next child places his home on the map. Streets are added as the homes are placed on the map. Other buildings are placed in their relative positions.

**I**T would be interesting and helpful to have the children actually walk down the street from the school. They turn left or right when they normally turn as they walk home. The children obey the traffic and safety rules as they walk down the streets on the map. This would also provide an opportunity for the teacher to observe the learnings of the pupils in a "play life" situation.

The names of the streets are written on the floor, intersections are lined with safety zones, traffic signs are placed at the proper intersections and other "landmarks" are put into position by the students.

After the map has been completed the students would walk up and down its streets describing their walk and the objects placed on the map. As they do this walking and talking, the map should become more realistic to them. When the students have learned the map, the teacher might have them make a three-dimensional map on a sand table. This would be more abstract than the map on the floor. Instead of walking up and down the streets, the children could have their fingers walk through the streets. The sand table would be much smaller, the streets much narrower, and the buildings very small. Small blocks of wood used in games such as *Monopoly* might be used. The small symbols for houses and the larger ones for the school, store, post office, etc.

The sand table map would be more abstract than the map on the floor but it would still have three-dimensions. The writer believes that this transferring to a smaller, 3-D map is rather essential in order to assure more complete understanding by all the children in the class. The map should be developed as slowly as necessary to have every child follow the abstracting. The floor map should remain until the unit is completed so that the children may go back to it for reassurances when necessary.

After the children have walked through the map with their fingers several times, they may be ready to move to a more abstract level of understanding. That level would be presented on the chalk board. The map now leaves the horizontal plane and is presented on a vertical plane. It becomes more abstract because it is a series of lines drawn to represent the streets, signs, buildings, etc. If this is developed slowly by the students, there may be little or no difficulty involved. Nevertheless, the teacher must be certain that the students are understanding this transference from the three-dimensional horizontal model map to a two-dimensional drawn or diagrammatic map in a vertical position.

The students should trace the routes home, to the store, post office and friends' homes on the drawn map many times, with the teacher observing each motion of the fingers. Questions, answers and discussions should be held to evaluate the learnings of the students. References would be made to the sand table map and the floor map as the occasion required.

Moving into the final phase of this elementary home-school community map the teacher may wish to reduce the map to 8½ x 11 inch paper for the children to take home. The writer believes this could be achieved by having the teacher attach an 8½ x 11 sheet on the chalkboard beside the larger map. While in full view of the children, the teacher would draw the outline of the map's main arteries on the sheet of paper. He or she would explain to the children that the map is being reduced, or made smaller to fit that size paper. If one line is smaller, shorter, or narrower, then all lines must be made smaller, shorter or narrower. He could draw the school and perhaps some other buildings or symbols for them on the map and have the students discuss them. Perhaps some of the children could assist in placing them on the drawn reduced map.

In preparation for the next day's lesson, the teacher could duplicate enough maps so that each child would have two copies. On the first one, each child would trace his safe way home and place his home on the map. He could color his home, the school, store, etc. On the second map, each child could make a complete map showing the location of the homes of all the boys and girls in his class and all the important "landmarks."

This map construction could be a very real evaluation of his knowledge of map making and interpreting on an elementary level, as well as providing enjoyable problem solving.

In the years to follow, the child's understanding of a larger community (a larger section of town) would have developed. His small world has grown and he has gained some understanding of size relationship. A map of his city is made very similar to his own map, but a greater area is included. The study of maps continues from city to county, to state, to country, to continent, to hemisphere and to the entire earth. As the child's community gets smaller in size relationships, his world of understanding, if developed properly, continues to grow, and, having an understanding of elementary maps, he can graduate to the study of more complicated maps.

# Earphones Permit Select Showing Of Film in Classroom

by Samuel R. Rubinstein

IT is well known that earphones can be utilized by pupils listening to recordings without disturbing other pupils at work in the room. Capitalizing on this idea, we experimented with the possibility of having six pupils listen with earphones and see a 16mm motion picture film projected on a screen. This idea has great potentialities.

The mechanics of this set-up are quite simple. An adapter box with six jacks was used. The box has its own plug which was inserted into the jack marked "speaker," in the audio section of the projector. Six pairs of earphones were plugged into the adapter box.

Six children sat around a table and watched the film projected about 4 feet away onto a white surface glued onto the inside of a shadow box. On this enclosed surface, black-and-white and color pictures showed up very clearly without having to darken the room or to draw the shades.

It should be possible to use this arrangement in any subject where small groups are expected to do independent research. Committees often require special films. Usually they are forced to spend extra time or move themselves or equipment to other rooms. This new method would make these disturbances unnecessary.

The film can be shown in one corner of any room; a table and several chairs provide a study area for the pupils. While these pupils are listening and watching the film, other pupils continue with their work and they will not be affected by any sound from the projector.

One jack in the adapter box can also be used with a plug from the tape recorder. We have taped special sound effects from film sound tracks, as well as some interesting commentaries on various subjects. Tapes are reused as pupils progress from one subject area to another.

Initially pupils were curious about this new arrangement and stopped work to watch the other pupils engrossed in listening and in viewing the films. Soon, however, everyone continued work at his own activity in the shop or in the classroom.

The teacher assigns one of the two AV squad monitors in each class to handle the threading and the rewinding of the film. When the projector is returned to the audiovisual building coordinator, the earphones remain plugged into the adapter box and are placed in the box with the white "screen" surface. This assembly, thus, is returned as a unit. The white surface is protected by interposing a sheet of oak tag or piece of felt between this surface and the earphones.

Teachers will find even greater values from using these films if they find ways to use them for small group instruction within larger classes.

# “I Can Can

by Hel

ONCE upon a time there was an AV director who, along about June, became very tired and discouraged. There seemed to be nothing but problems: projector troubles, films arriving late, need for more money for the program (a whim of which the administration took a dim view), all departments wanting films on the same day at the same hour. And next year's film programming loomed like a lurking monster.

To top it off, the boss, who up to now had seemed a reasonable, fair-minded man, turned out to be mean enough to think the AV director should give up part of her lunch hour to struggle with and solve all these problems.

As she lay tossing sleeplessly in bed that night, counting jobs to be done instead of sheep, an amplified stereophonic voice came up from nowhere. She heard the soothing voice tell her that all suffering AV directors were entitled to one dream of perfection. She felt the world lifting from her shoulders as she awakened to the wonderful land of tomorrow.

The schools were all functionally designed for audiovisual teaching. There were no more projector or room-darkening worries. All a teacher had to do was press a little button and there appeared on the wall a bright and perfect image. The room itself, meantime, had retreated into the exact degree of darkness to accommodate the reflected picture.

There was no scheduling problem and no shortage of materials. A central source provided all materials. All the teacher had to decide was which of the buttons to push. There were no worries for the AV director. In fact there was no

need for a director because there was no pre-planning, no catalogs or ordering to worry about, no struggle to get the post office to deliver the films on time, and no records to keep.

And the teachers? That was best of all. Bless their hearts for being in this dream world! They all used materials wisely and well. No in service training was necessary—except when an occasional teacher couldn't remember which button was which. They were all happy and satisfied. Not one griped or wrung his hands over the human limitations of an AV director. They no longer needed selection or programming help for they knew that all the projected images had built-in automatic previewing devices that eliminated mistakes. If any of the buttons got stuck one only had to press the big button for automatic repairs. (The medium-sized button was for electronic computation of all statistics.)

The AV director now ate her lunch with dignity and composure, with no pressures or problems. There were no more professional meetings for (1) there was nothing to discuss, (2) no one had problems, (3) everyone already knew the answers.

Yet she was sad at times when she remembered the old days. She missed the poor distracted souls with whom she had argued, laughed, and cajoled. She enjoyed helping them. It wasn't the new pay. That was just right. High enough to raise her morale, but not enough to lower her morals.

The days slipped by in this blissful haze. Then they dragged, and she realized that this was a terribly dull situation. An instructional program

ream

?"

ton

without audiovisual problems was a program without challenge. Such a situation was too boring to exist.

At that moment, in no uncertain tone, the alarm cried out "For heaven's sake get up and get going or you'll be late again!" Then she realized gratefully that here was another day with all its difficulties to be faced.

She appreciated the privilege that was hers: to help others meet aggravating situations and imperfect conditions. She knew the genuine satisfactions that came from the professional relationships with other teachers as they worked and planned together to achieve the ideal program. She began to realize that her ideals would never be accomplished merely by pushing buttons.

# FILMSTRIPS

by Irene F. Cypher

Are you a pattern follower? The majority of us are. There is nothing wrong with patterns; actually, a pattern is a type of map which helps to chart a course or guide in the presentation of something. The trouble with being a *pattern follower*, however, is that creativity and side-road investigating are often overlooked by the one who adheres too closely to a pattern. The truly creative craftsman is the one who adds little personal touches to his pattern.

. . . All by way of introduction to the fact that a new school year is about to start. We face new classes, and we also face the task of helping them become acquainted with much the same basic information we presented to last year's classes. There is a subtle danger in the temptation to look at last year's pattern of subject presentation as an ideal guide for this year's work. Try to resist this temptation if you can, for the filmstrip that stimulated last year's discussion may leave the new class totally uninspired.

If, as a teacher, you are thinking about this problem of the use of instructional materials give some attention to new productions; try a slightly different method of presentation for old materials; if you do use materials you have used before then try, with apologies to Gilbert and Sullivan, to "make the material fit the need." It is just possible that both you and the new class may have an even better year (and learn a lot, too!).

*Aural Comprehension in French* (2 units of three filmstrips each, with record or tape; produced by Teaching Auidials and Visuals, 250 West 57th St., New York 19, N. Y.; \$18.80 for unit of one filmstrip and record or \$27 for one filmstrip and two 5-in. reels 7½ i.p.s. sound tapes). Known as "The Audio-Visual Comprehension and Dictation Exercise Units," this puts into the hands of language teachers a set of practical material well planned and well organized. Photographs for the filmstrips were taken in France and give us good visuals with which to show something of this country. The records or tapes provide well coordinated narrations which give meaning to the visuals and also provide for vocabulary training and help

to make the language itself meaningful. "En Bretagne," "A La Plage," "La Douce France" are planned for the junior high school or first year French; "Paris—La Ville Pour Flaner," "Du Haut De Notre Dame De Paris" and "Tout Droit Au Sacre-Coeur" are for the senior high school or college entrance board students. Pictorials are sharp and artistic; the voices of the narrators are clear and well paced. There is a flexibility to this material and it will help to make language study and comprehension interesting. It shows what happens when a producer devotes some thought and attention to the fact that study of language involves both appeal to eye and ear and a sensible arrangement of subject content.

*Cities of Europe* (7 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.: \$42 per set, \$6 single strips). The cities included in this series are Rome, Paris, Vienna, London, Madrid, Toledo, Granada and the Alhambra. In each instance the city is one closely associated through the centuries with major events of history; they are also centers of cultural and artistic importance. We are given a view of the city itself and also provided with information about the industrial and political life. This is social geography material for middle and upper grades, and is also recommended for art classes at the same level.

*Elementary Science Series* (8 strips, color; produced by Moody Institute of Science, P.O. Box 2575, Los Angeles 25, Calif.; each for 1 to 4 filmstrips, other prices for quantity purchases). The photographers who work for this producer seem to achieve a quality of picture that is truly vivid and realistic. The range of subject matter in the series includes Life Story of A Butterfly, How Does A Garden Grow?, How We See and Hear, Miniature Plants of the Desert, Our Desert Treasure, Wealth in the Ocean, Wonders of Crystals and Wonders of Snow. Because so many of the shots are close-ups, one has almost the feeling of working with actual objects and specimens. The strips are good for

classroom science sessions and also as preparation for field trips and nature study trips.

*French Language Filmstrips* (2 strips, color; with record and manual; produced by National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, New York; \$7.95 each). Any class would enjoy visit to the great wheat farms of Canada and to the equally interesting forests and logging camps. These areas provide the background for becoming familiar with simple French conversation. The pictures involved in "Exploits of Ti-Jean Dans L'Ouest" and "Ti-Jean et Les Boucheurons" catch the spirit of the story content and the record narrations are easy to comprehend. Material of this type is appealing; it helps to make language study interesting and also provides a medium which allows the pupil to use the language as an actual channel for communication. These are interesting stories, and to understand them you learn to use the language; you find yourself using the words of the narrator.

*Picture Book Parade* (4 strips, one black and white and three color, and record with four stories; produced by Weston Woods Studios, Westport Conn.; \$25 per set). Several months ago we reviewed some of the filmstrips of this series. The producer has now combined four of the filmstrips, with the story books and the story narration on record. The result is still excellent and to be recommended for any primary grade work in reading language arts and especially for story hours. "In the Forest," "Curious George Rides A Bike," "Jenny's Birthday Book" and "The Five Chinese Brothers" are all sprightly tales. In this new package unit the delightful pictures are balanced with story and the quality of the narration matches the art work of the filmstrips. There is a simple, direct style in both which is appealing to children. This is material that gives both teacher and pupils the potential for many hours of enjoyment.

*The 90% You* (single strip, color with manual; produced by William F. Gottlieb for Am. Inst. of Men's and Boy's Wear, Inc., and available without charge from Audio-Visual Associates, Box 243, Bronxville, N. Y.) High school students have long been told that attention to clothing and grooming are important to success in both social and business life. When it came to material with which to illustrate these statements, very little was

available that was either of value or interest for the boys in a class—everyone seemed to assume that only girls gave serious attention to such matters. This filmstrip addresses itself squarely to the high school boy and gives him some plain, common sense advice as to the reasons for wearing clothing suitable to specific occasions; it also stresses the essential value for giving thought to the care of clothing and body. This is a fact-account with personal meaning for boys.

*Winnie The Witch* (single strip, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$6). A witch who fails to scare anyone is sure to have many problems, and the witch of our filmstrip is no exception. The story of her trials and her triumphs in achieving true witch-status is delightfully illustrated in a story with seasonal appeal for primary graders. The filmstrip lends itself to story-viewing and to story-telling. It is fantasy with value for creative language work.

*The Development of the American Republic - Modern American Republic* (7 filmstrips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$37.80 per set, \$6 single strips). Outstanding events from 1900 to the present day constitute the material of this series. Particular attention is centered on such units as events before and after World War I, the Depression period and its effects on American life, World War II and the Atomic Age. This is social history, and the pictorial content shows us how the United States changed from a country with a policy of isolation to one of leadership in international affairs. Emphasis is placed on social and political trends in the various periods and the implications for future periods. The series will be found useful with any text, and can be made the basis for considerable research and study. The strips are not cluttered with a lot of little details, but give broad presentations, allowing for individual class work units. Particularly suited to junior and senior high school work.

*The St. Lawrence Seaway* (3 strips, color; produced by Jam Handy Organization, 2821 E. Grand Blvd., Detroit 11, Michigan, \$14.95 per set). The St. Lawrence Seaway is undoubtedly one of the greatest engineering projects of this century. The material here presented gives us the background of historical events leading up to the planning of the Seaway, a pic-

ture journey through the Seaway, and an outline of how the project operates. Any understanding of what this great waterway means to both Canada and the United States will necessitate study of just such material and the filmstrips are excellent for both social studies and for economic and world geography. The facts are clearly presented, and the economic results of the great project well illustrated. The photographic journey through the locks and along the great river is interesting and gives us a feeling of appreciation for the entire project.

by L. C. Larson and Carolyn Guss

## Origin of Weather

(*Carousel Films, Incorporated, 1501 Broadway, New York 36, New York*) 26 minutes, 16mm, sound, black and white, no date. \$135.

## Description

Through the use of time-lapse and other special photographic techniques, *Origin of Weather* indicates the present state of knowledge concerning weather and dramatically portrays research by Dr. Joanne Malkus and Dr. Bernard Vonnegut in the area of cloud formation and the creation and effects of storms. The fact that there are more things unknown about the weather than are known is illustrated by dramatic pictures of tornadoes, "run-away" clouds, and hurricanes, causes of which are not yet understood. Other unknowns include the process by which a cloud is formed, what makes rain, what causes lightning, and how the forces in the atmosphere interact to produce high winds or great snow storms.

In an effort to find answers to some of these questions, the audience is taken to the laboratory of Dr. Joanne Malkus. By means of a cup of hot coffee the main ingredients in cloud formation are identified. Much the same atmospheric conditions prevail over tropical oceans as those over the coffee cup. Time-lapse photography is used to show clouds forming, moving and disappearing. Simple line drawings are used to explain the formation of clouds.

In order to study the clouds more thoroughly, an airplane is used to take recording instruments of various kinds into the clouds. Most of the clouds, it is pointed out, exist for only about ten minutes, being eroded out of existence by the surrounding cool, dry air. Sometimes, however, a cloud grows so rapidly that the cool air cannot evaporate it. The resulting "run-away" cloud is pictured by means of time-lapse photography. When scientists find out what it is that permits the formation of such giant clouds, Dr. Malkus believes that they will be able to determine what forms and maintains hurricanes.

In the North Pacific area the giant "run-away" clouds are often formed.

By flying between Hawaii and Guam, Dr. Malkus was able to obtain a photographic record of the cloud formations. The motion pictures thus obtained were transformed into a map representation of the cloud formations. The maps clearly show that the clouds tend to line up with the wind. A radar picture of a hurricane is shown and a possible relationship between the arms of the hurricane and the lined-up clouds is proposed. However, if there is a connection between the lining up of the clouds and the formation of hurricanes, it is still not known how the clouds line up nor how they provide the energy to drive the storm.

It has long been thought that electricity resulted from rain in a thunderstorm. Dr. Bernard Vonnegut has been doing some experimentation which challenges this accepted view. He suggests that lightning comes first and is a major force in the formation of rain drops. A simple laboratory demonstration, pictured by slow motion photography, shows the influence of static electricity on the formation of large drops from small drops of water.

A small Van de Graaf generator is used by Dr. Vonnegut to explain the formation of electricity in the clouds. He likens the vertical currents of air which carry electrical charges upward to the cloud to the operation of the Van de Graaf generator.

To test his theory, Dr. Vonnegut studied the formation of thunderstorms over a mountain range in New Mexico. A photographic record was made of the cloud formations; an airplane was used to fly over and measure the electricity in the clouds; balloons were used to measure the vertical currents of air; and radar was used to determine when raindrops were first formed within the cloud. The information thus recorded was later reduced and compiled in chart form. Electrical activity was shown to precede the formation of rain and seemed to coincide with the growth of vertical currents within the clouds.

Although not conclusive, preliminary results tend to support Dr. Vonnegut's theory. Such healthy skepticism and application of experimental science is helping man gain a greater insight into the forces of nature. One day man may control the weather.

First, however, he must understand the atmosphere and its activities.

## Appraisal

The preview committee felt that this was an outstanding film for several reasons. It gives a good general view of the problems associated with the understanding and forecasting of weather, and it shows scientists, who are portrayed as real people, at work on a real problem. A healthy skepticism and a willingness to try new things, both of which are essential to scientific progress, likewise are portrayed. Much information concerning weather is presented and the handling of the subject is very interesting.

The outstanding feature of the film is the photographic portrayal of weather phenomena. The use of such motion picture techniques as time-lapse and slow motion also contributes much.

Teachers on the junior high school through college level will find the film a worthwhile contribution to the study of weather. On the junior high level the presentation of basic information on weather and the depiction of the scientific method of problem solving should add realism to the understanding of both by a general science class. On the senior high school level the factual information should serve as a good review of knowledge previously acquired and as a springboard to further study. The college student will find challenging the new concept of rain formation, and he will also find interesting the photographic record of weather phenomena and the methods of collecting data.

Originally produced as a television program, this film should find a place for itself among the better educational motion pictures on weather.

—Donald Nicholas

## Musical Performance: Improvement for Snare Drum

(*University of Wisconsin, Madison 6, Wisconsin*) 23 minutes, 16mm, sound, black and white, 1960. \$80.

## Description

Through a number of demonstrations, *Musical Performance: Improve-*

ment for Snare Drum discusses the common mistakes made by student drummers and how to correct them. It calls for audience practice right after each example while the instruction is still fresh in mind.

The demonstrator starts by emphasizing correct grip of the sticks, for without this basic knowledge one cannot apply drumming fundamentals correctly. He then proceeds to demonstrate the fundamental rudiment—the single stroke roll—and calls attention to the students' neglect of the wrist motion and failure to decrease the height as the speed increases.

Comparing the early strokes of the drummer to the bowing of a violinist, he demonstrates the downstroke, upstroke, full stroke and tap while the appropriate notation for each stroke appears on a corner of the screen.

Continuing with the rudiments, he shows how to do the flam which is a combination of the upstroke and downstroke. A drummer too often makes the mistake of "airing" the sticks all at once while doing the flam-accent-number-one. This looks awkward aside from producing the wrong sound and rhythm. This can be corrected, according to the demonstrator, by using a tap for the first note and an upstroke, slow and graceful, for the second note.

Whether playing a drum solo or in a concert group, a drummer is judged on his ability to make a roll. The demonstrator executes the fundamental rolls and demonstrates the five-stroke roll on paper and carbon to show how even the strokes should be. He plays drum music to illustrate the *lento* and *allegro* tempo.

Very often the drum tone is criticized as rattly or tinny. The demonstrator shows how a misadjusted drum with either a loose batter head or snare head or both produces unsatisfactory sound. Poor sound may also be attributed to the use of incorrect sticks such as large street sticks on an orchestra drum or small orchestra sticks on a large drum.

### Appraisal

A how-to-do-it film, *Musical Performance: Improvement for Snare Drum*, would be of interest to drum students. Band directors would profit from it because mistakes as well as their corrections are demonstrated. Definitely not for beginners, the film is aimed at drummers on the junior high school level through college who have had some experience and is to be used as a check up and improvement on their playing.

Though the film covers many skills, it is well done and well explained, besides providing for practice on the part

of the audience. However, in the closing sequence on drum adjustment and use of sticks, the evaluators are at a loss to know what is to be practiced. Too, the demonstrator could have maintained more eye contact with the audience. He seems ill at ease and keeps looking sidewise off-screen as if he is being cued, or down as if he is reading from a script.

Overall this film offers both instruction and opportunities for practice in the use of fundamental drum techniques to help the average beginner become a more skilled performer.

—Herminia Barcelona

## Electromagnets: How They Work

(*Encyclopaedia Britannica Films*, 1150 Wilmette Avenue, Wilmette, Illinois) 11 minutes, 61mm, sound, color or black and white, 1960. \$120 or \$60. Teacher's guide available.

### Description

*Electromagnets: How They Work* uses simple laboratory demonstrations and commonplace examples of the application of electromagnets to explain their operation and usefulness to man. As a youngster is shown experiment-

## PHILCO advances the science of visual education

### WITH NEW TRANSISTORIZED CLOSED CIRCUIT TV SYSTEMS

Visual education, through the use of closed circuit TV, is being adopted rapidly by schools throughout the nation. Philco's broad experience in educational TV is your assurance of obtaining the greatest flexibility and economy. Philco's new all-transistor equipment is your guarantee of maximum reliability, freedom from maintenance and ease of operation. Write today for information and your copy of the Philco Closed Circuit TV Systems Planning Guide.

#### Government & Industrial Group

Philco Closed Circuit TV Systems permit multi-group instruction, with full audience participation.

**PHILCO**  
Famous for Quality the World Over

ing with a permanent magnet, the narrator reviews specific facts about magnets. As an electromagnetic crane is shown lifting scrap metal, electromagnets are described as having magnetic properties only when current is flowing through them as opposed to permanent magnets which cannot be turned off.

Materials for making an electromagnet are then introduced. A dry cell battery is used as a safe source of electric current, and pupils are warned that house current, on the other hand, should never be used for experiments with electricity. The battery, wire and

switch are connected, the switch is closed, and animation is used to portray the flow of current through the wire.

The demonstrator shows that a permanent magnet will pick up iron filings. Wire, on the other hand, is depicted as being non-magnetic until current is caused to flow through it; then the wire acts as a weak magnet. The magnetism in the wire is not sufficient, however, to pick up small nails. How can the field be made stronger? The wire is formed into a coil to concentrate the magnetic field, and a few nails are lifted. The magnetic field can

be further strengthened by inserting an iron core into the coil of wire. This is demonstrated by the magnet lifting more nails once the core is inserted.

Two steel weights of two and five pounds respectively are introduced, and the electromagnet is strong enough to lift the smaller of the two weights. How can it be made strong enough to lift the five pound weight?

One way to make an electromagnet stronger is to increase the number of turns of wire in the coil. When this has been done, the electromagnet easily lifts the five pound weight. To lift a ten pound weight, however, it must be made still stronger. This can be done by increasing the amount of current flowing in the coil. A second dry cell battery is connected in series with the first, and the electromagnet is made strong enough to lift the ten pound weight.

The points covered relative to the structure and strengthening of an electromagnet are reviewed. The crane is again pictured as an application of the electromagnet. The crane, the automatic dial system of the telephone, the telephone bell and the telephone receiver are pictured as devices making use of electromagnets.

To make the magnetic field visible a piece of paper is placed over a permanent magnet and over an electromagnet. As iron filings are sprinkled over the pieces of paper, a definite pattern is formed. The similarity of the two patterns is pointed out, and the narrator asks, "Is there a connection between electricity and magnetism? Can you find the answer?"

### Appraisal

The elementary and junior high school teacher will find *Electromagnets: How They Work* to be a clear concise presentation of the principle underlying the construction and operation of electromagnets. The material presented is well organized and illustrated. The demonstrations are simple enough that students may want to try them for themselves. In this connection the teacher's guide points out that considerable heat is generated in the wire if the battery is left connected for any long period of time. The short life of batteries used in this type demonstration is also indicated.

Teachers will find the film to be an excellent introduction to the study of electromagnets. It should serve not only to instruct, but the "open-ended" technique should also encourage further study on the part of the more able students.

—Donald Nichola

### New...for Your Language Laboratory—an Add-a-Unit Tape File

Matches and lock-stacks with your Standard Filmstrip Library Plan cabinet

One new Standard Recording Tape Add-a-Unit drawer file provides a more convenient way to safely file up to eighty-four 5-inch or sixty 7-inch tape reels in original cartons. It meets the need of the starting, small, growing, or a large recording tape library. Add-a-Unit as your tape library grows, one on another.

#### Flexible

Has three adjustable filing rows for 5-inch tape in the 3 rows, or one row of 5-inch tape (24 reels) and one row of 7-inch tape (24 reels) in cartons, or

2 rows of 7-inch reels. Center row in combination filing holds an additional twelve 5-inch or twelve 7-inch reels in cartons.

Lock-stacks with matching Standard Filmstrip Library Plan cabinets Nos. 360D, 400, 1080, 1200 and EBFilms 2-drawer cabinets, in use in thousands of schools.

Thirty-six, 400-foot, 16mm films in cans instead of tape may be stored in the Add-a-Unit, if desired.

Finished in hammerloid grey with 4-inch tabs. Drawer opens and closes easily due to MB extension arms. All reels accessible. One unit bolts to another or to a filmstrip cabinet.

Size 9"H x 19 1/2"W x 17 1/4"D. Made of heavy-gauge steel, electronically welded. Wt. approx. 30 lbs. Mobile steel floor bases available for this tape file.

Order a No. 38 Standard Add-a-Unit Recording Tape Drawer file from your A-V dealer, complete .....\$36.80

## Lit-Lit Filmstrip

What does Lit-Lit mean? It is the shorthand for The Committee on World Literacy and Christian Literature of the National Council of Churches, 475 Riverside Dr., N.Y. 27. This great organization has produced a fine filmstrip to tell the story of literacy to children. They call it "*Lit-Lit Makes Wishes Come True*, and in good color photography and a nicely composed printed commentary, it shows lively children in all parts of the world and talks about their need to be taught to read and what being able to read really means. Commendable job! Script by Elizabeth Allstrom and the photos by Floyd Shacklock, Leon Kofod and Marion Van Horne.

The script is followed by a section of suggestions to guide the user in getting the most from this filmstrip. There are 52 frames, and the utilization time can vary from 15 to 30 minutes, depending upon the teaching techniques employed. Available with this filmstrip is a splendid packet of materials on world literacy and literature. Send \$5.00 for the fs and add 50c for the Children's Packet. A good buy for your AV library.

## Jews In U.S.S.R.

The Department of Audio-Visual Aids of the Union of American Hebrew Congregations (UAHC) has just released two more titles in its "Jews In Distant Lands" series: *The Soviet Union*, Part I and Part II. Each has 50-odd frames of excellent color photographs and informative printed commentary which forms but a part of a very useful guide for the user.

Part I shows glimpses of Jewish life in Moscow and Leningrad and Part II takes us to Kiev and Tashkent. In each of these sequences there are a number of scenes of general interest. These serve as excellent context for pictures of Jewish people and their synagogues. With rare exceptions these scenes show only old (Jewish) people. No schools or organizations for Jewish youth under 18 are permitted by the Soviet government, and this rule is vigorously enforced. Everything must center in synagogue worship and there

are no clubs for men and women as in the U.S.A.

I found these two filmstrips interesting. They filled a gap in my information about the life of a minority group on the USSR. They might do the same for you. I recommend them for use with young people and adults in church and synagogue. They should stimulate sober thinking, further investigation, and deep gratitude for the blessed freedom we have in our land to worship and to teach. From UAHC (838 Fifth Ave, N.Y. 21) at \$7.50 each.

## Documentary

*Epistle From The Koreans* is a 35-minute b&w film produced by the Department of Stewardship and Promotion (DSP) of the United Presbyterian Church in the USA, 475 Riverside Dr., N.Y. 27. It is widely available to UP churches through presbytery and synod offices and from DSP.

In moving scenes it tells the story, via the documentary method, of the young Korean student, In Ho Oh, who was brutally murdered in the spring of 1958 in Philadelphia and of the letter from the parents to the city asking that it deal leniently with the murderers and offering funds for their rehabilitation thru education.

In the film we have the whole story, with a little too much realism here and there—the murder scene, for instance. We doubt if pictured brutality can edify. Knowing what to include and leave out is the essence of the art of the documentary film, and this art takes the measure of all who would use it, from client right on through producer and director. All this material could have been compressed, it seems to this reviewer, into a 28-minute film to considerable cinematic and utilization advantage.

Despite the above comments it is a useful film for general congregational use and for use with young people. The utilization guide, excellent in every respect, was written by the Rev. Arthur M. Byers, Jr., who acted as executive producer. It can help any user to a fruitful presentation of the film.

## They Did, Indeed

Adapted from the book by the same title, the film *They Looked for A City* tells the incredible but true story of a Jewish-Christian family in Eastern Europe and its bitter struggle to survive and find a place of refuge. From death under the sabres of Russian Cossacks to death under the London blitz, we follow via excellent photography and a fine story telling the fortunes, calamities, triumphs and trials of a remarkable family whose faith in the God of Abraham and Christ never weakened. Excellent feature-type film for church groups, especially on Sunday nights. It has 45 minutes running time, leaving within the hour time to give it a context of scripture, hymns and prayer. Mrs. Victor Buksbazen, author of the book, and her husband, with the help of a good professional cast, have produced a fine and useful film. From Friends of Israel Missionary and Relief Society, 330 Witherspoon Building, Philadelphia 7, Pa. Rental \$25.00.

## Planned Families

If culture is the coefficient of the human cortex, then planned families ought to make a lot of cerebral sense. But such is not always the case, as we see in the 14½ minute film *Fair Chance*. It is the story of two fathers. They meet in the corridor of the maternity wing of a hospital. One is calm; his daughter was planned for and has just arrived. The other is in panic, delayed labor, young children at home, bills.

The calm one invites the other to have a cup of coffee and learn how, with the proper help, families can be planned. Of course, all the information in the film is *about* the need for planning for children through the securing and use of medical knowledge. Good film for that purpose. Board spectrum of usefulness: churches, schools, social and welfare agencies, colleges, etc. Color or b&w; available from Pathueon Films, 2625 Temple St., Los Angeles 26, Cal. Produced by the Planned Parenthood Federation of America.

## Now, Really!

Quite a 'family' of films have been produced on the general subject of Prejudice. Some show what it is; others miss the mark. Some try to go clever and flop. Some try the arty tack and take a tumble from effectiveness. *Heritage*, (10-min; b&w, and from McGraw Hill, 330 W. 42nd St., N.Y. 36) is one of this family. It is clever cartooning. It tries to define the

natural rights of man and show what each man can do about maintaining them. But the intellectual powder was a bit damp, it seems to me, and the film just sputtered without any bang of real meaning. I could be wrong, of course. I just don't see either children or youth or adults—as I know them—getting much but bland entertainment out of this package.

*A Day In The Night of Jonathan Mole* is not quite the same as the above. It is clever and dramatic in structure, and tells a fantastic story of Mr. Mole, super-patriot, who dreams he is in the land of "Adanac." There he sits as a judge in a trial. A Jew wants to be a broker on the stock exchange, an Indian wants to be a physician and an immigrant wants to be a journeyman plumber—all in violation of the basic law of this whimsical Adanac land. Prosecution and Defense bring out all the fantastic arguments (of the prejudiced man and his society) which define and delimit the human status of these three men.

Called to the stand are Mrs. Platitude, Mr. Shortsight, Mr. Parrott, Elmer Bigot and others. What a trial it is! At last Mole renders his decision—against the defendants, just like he would in the daylight Adanac, or C-a-n-a-d-a! No change; so he stumbles off to his job next morning the same Old Mole, but we may go back to our jobs with the evidence of the trial vividly in our minds, and not soon will we forget the faces of the defendants. With all, a pretty good job; way above the average. From McGraw Hill (see above).

### Human Document Film

The 22-minute color film *Vincent Van Gogh* documents both the art and the life of this great and for-many-

years-neglected Dutch painter. Many photos of his paintings are skillfully interwoven with fragments of the moving letters which he wrote almost daily to his older brother, Theo. We see not only a progression in his canvasses but a movement in his feelings, his impressions, his hopes, his goals, his excitements and his depressions. The musical score is vivid and helpful.

With all a fine film. Use it for the art's sake, but don't overlook the man behind the art. Use it as a human document, too, and let it lead your youth fellowship or that weary circle of women or those tired business men who enjoyed their supper too well, into some creative discussion about the uses and issues of life. From Coronet Films, Coronet Building, Chicago I, Ill., and from many rental libraries (I hope) across the nation.

### Moral Guidance Filmstrips

Tom goes swimming when his mother advises against it; Helen thinks a new girl in the community, whom she scarcely knows, is stuck up; and Alan finds out that bad manners don't pay while good ones do. The titles are: *Tom Misses a Picnic*, *Janet Finds A Friend* and *Alan Minds His Manners*. These are from "Adventures in Personality Development" by Creative Education, Inc., and are available through the International Film Bureau, 57 E. Jackson Blvd., Chicago 4, Ill.

These are captioned filmstrips with live color photography. Each filmstrip, the producer says, deals with young people making decisions about right and wrong, and the user is advised, at the beginning of each filmstrip, to discuss the things that interest the class most.

It is good to see captions used. There is nothing wrong with captions per se. There can be a lot wrong with particular captions. Dialogue is not good in captions, it seems to me, especially where a story is being told. Why not cast it into narration? It makes for smoother flow of the story.

Again, the producer counseled the user to discuss as he goes. Discuss what? I saw nothing worth stopping for; nothing urgent emerged in my screen. All I saw was lightweight matters of prudence rather than serious moral problems.

The locale of the homes is upper suburbia; the target audience seems to be Juniors—where the 'issues' would fit—but the 'actors' in the fs look like late Junior Hi youth. My young people would not take the subject matter seriously. Perhaps they are different in the public schools. General evaluation: Not very potential for church use.

## WORKSHOP FOR PEACE

A complete tour of the U.N. Headquarters in New York, including the meeting halls of the General Assembly, the Trusteeship Council, the Economic and Social Council, and the Security Council. Also shows the General Assembly in action and how the Secretary-General and the U.N. Staff carry on their day-to-day activities. (new version 1960)

# AUDIO

by Max U. Bildersee

## Stability Vs Volatility

It has often been said, particularly in the field of the motion picture projector, that today's machine is so very much like those of many years ago that there is an indication of design freezing. We have heard accusations of mental stagnation, of failure to introduce new ideas to save film wear and tear and of plain downright almost smug satisfaction with "that which is" to the end that technical, mechanical progress in film projection has been at a standstill.

This is unfair! Unquestionably every major manufacturer of equipment has better means of film transport, superior film gates and higher quality picture and sound projection. Every effort is made to improve equipment—even to redesign equipment—to be beneficial to schools. The vast library of 16mm sound films, each of which was produced to be projected on a 'standard' machine at a 'standard' speed must limit the potential of such research.

And yet if a new machine came on the market immediately embodying entirely new principles of film movement it would die aborning because we, as schoolmen, would immediately denounce it because the library of available materials would have to be re-made at great cost. True, the cost would fall on the producer, but it would be passed on to the schools in higher sales prices, higher rental prices and the great costs of conversion. No! It is not any one group's failure which has caused this standardization; rather it is the nature of the medium and the great costs and risks involved and inherent in any change.

Audio equipment, on the other hand, has been anything but stagnant. And additional changes are forecast. Does this mean that we will (or did?) stop buying the materials we needed? No . . . it meant that we adapted rapidly and successfully to changes.

Let's examine the record of those changes. We need go back only a generation ago to find that there were no magnetic recorders available to schools. There were universally disliked and distrusted disc recorders which none of us used to any great extent. And there were central sound systems which were instructional monstrosities, mere pieces of furniture.

And finally, there were recordings. These were in short supply in terms of variety, they were delicate and fragile, being easily broken as well as rapidly worn out, and they lasted too short a time for effective instructional use. Still, schools bought them and used them for there are ever pioneers in struction.

These recordings were of the old '78' variety. They were shellac and, unlike a famous brand of coffee, 'good to the first drop' only. True, there were automatic record changers, but even these were unreliable and many records were chipped sliding down a spindle, or as the three ounce or heavier tone arm plopped into place.

Then came the introduction of LP records—both 33 1/3 and 78 rpm. This, it was forecast, would either revolutionize the record industry and immediately antique every 78 rpm machine, or it would introduce the ultimate decline and downfall of the industry. Obviously, looking backward, we know that pessimism was unrealistic. We know that schools bought machines—and more machines—and that the old phonographs were not antiquated—they were junked!

Realistic observers today predict the early demise of the 78 rpm speed! And we are not inclined to disagree, for practically every recording today is produced at 33 1/3 rpm. To appease phonograph record collectors, for a while, records were produced at three speeds—78, 33 1/3 and 45. But no longer.

Automatic record changers have changed, and now the record is protected through superior changers and through the internal manufacture of the disc itself. Vinylite has replaced shellac and now to clean records you merely dip them in appropriate water/soap solution and 'drip-dry' them! We could go on, but suffice it to say that record longevity is now guaranteed, barring too rough treatment, by superior materials, superior pressing, thickened lips to give added strength and tone arms whose pressure is measured now in grams as against ounces of not so many years ago.

So the record industry was reborn through modernization and today every school, or nearly so, has record players as well as record collections to speed and enrich learning.

And along came a new development—magnetic recording! This was first introduced as wire recording . . . remember? These were spool driven and there was constant speed only at the hub of the take-up reel. If you never untangled a 'bird's nest' of your favorite wire recording, you were fortunate. And repair of the broken wire was so simple! Just tie a bow (preferably a square knot because a 'granny' might slip) in the wire and then anneal it with the end of a cigarette. Long after World War II major companies were trying to redesign and improve the wire recorder for the school market.

### Early 'Portables'

But magnetic tape took over. And there were a few machines on the market—a very few. We can recall stopping off in Cleveland and marveling at the first 'push-button' machine developed by Brush which later became a temporary standard for the schools. This was a portable machine—requiring two men and a small truck to transport it—but we are reliably

**Audio CARDALOG® Record Reviews on Cards**

# 943

**INDIVIDUAL CROSS-INDEXED CARDS ALREADY ISSUED!**

**SUBSCRIBE NOW — \$25.00 a year**

**Audio CARDALOG — Box 1771, Albany 1, New York**

**— A WORLD OF SOUND ON FILE —**

informed that some of these are still in use! They were rugged.

Tape speed: this was academic. There was a choice between 7.5 ips and runaway. And sometimes they did just that spewing tape all over. And then you quietly rewound a thousand feet of tape by hand. Dual track? Unheard of. We could go on with description of the early magnetic recorders, and we must say that they were magnificent developments.

Today's machine? You know it well. Rugged and yet lightweight. Speeds? 7.5 ips is still available but now you can range upwards to 15, 30 and even 60 inches per second. Not practical for school purposes, but they are available. Yet, 7.5 is still available but you can range downward too, to 3.75 and 1.875 ips. And these have become practical.

### Progress Made

Improvements in the medium? Of course there are new materials used for tape base, and surely more will come. We have progressed from the old paper tape through a variety of materials to superior quality tape media generally available, and much less expensive. As improvements have happened and been developed, so prices have changed because there has been greater circulation, more intense competition and increased school savings.

But this was guessed at 15 years ago!

These developments in audio equipment were paralleled in visual equipment in the early days of the motion picture. Does your school still boast of owning a single motion picture projector? Is it a 'carbon-arc' type? Does it use (as well as tear and burn) only 35mm film? Is it a silent machine? If so, then you may well complain about lack of change. But if you

are using modern non-flammable color film in an easily threaded 16mm projector in your classroom (sound of course), then please recognize that there have been changes, many changes. And guess with me that there will be more, many more . . . like 8mm sound on film (almost here) and video tape (as close).

One which is forecast reliably in the field of sound recording is a new cartridge type of tape, mounted on an automatic changer, using tape less than one-seventh of an inch wide, with dual track for stereo of course, traveling at a tape speed of 1.875 inches per second and satisfying the quality demands of the most critical listeners. Yes, this is forecast for early presentation, and indeed commercial models, it is hoped, may be available for school and home use early in 1961.

Such machines, using the cartridges designed for them, will hold up to six hours of continuous sound and all that one need do is press the start button, adjust the volume and tone controls, and that will be it. Talk about push-button teaching!

There are changes of a non-technical nature forecast in disc recording, too. Just as Columbia has sought a national distributor for their product, and as Ottenheimer has undertaken a similar arrangement, so we can anticipate that major record companies and minors as well will be nationally represented by school-to-school salesmen representing a variety of printed and audiovisual materials. There is an undercover scramble going forward to line up the better record producers and the finest product for exclusive representation. We will not be surprised if, within weeks or months at the most, we suddenly discover that the man who used to represent films, filmstrips, projectors, record players and tape recorders in a

complete (he said) audiovisual catalog will find himself hopelessly outdated if he does not have a catalog of superior recordings, too.

Isn't a major film/filmstrip producer with exclusive national sales organization quietly talking with several record producers in the effort to create an exclusive distributor/sales set-up for such products? In fact, there's bidding afoot as one competes with the other for this new line to sell.

Book firms are involved in this, too. Harcourt, Brace, American Book Company, Allyn and Bacon and others are in the audiovisual manufacture and distribution business more than ankle-deep. And they, too, will become important factors in this market. And all of this bodes well for the schools, for as the product is bettered, as the competition becomes keener and as ready availability is common rather than rare, prices will be affected.

There are good times ahead! This is based on relative volatility, not stability. It is a volatile product and an explosive market. And we, the consumers, stand to profit most from this combination involving distribution and competition.

### Special Help

Weston Woods Studios (Westport, Connecticut) whose superior storytelling records we have reported to you from time to time is now offering these records in company with appropriate filmstrips and scripts. They can be used in a variety of ways, both in direct instruction as well as in informal situations. The story-telling applications are immediate and obvious. But here, too, is a device to help teaching reading because the child needing practice or wanting to advance at a rate inconsistent with that of his classmates can look, listen and read by himself.

This practice may be frowned upon in some institutions and by some teachers and supervisors, but we have heard of it as being a regular practice in government schools for Indian children in some parts of the south. We investigated, found it to be true (in fact, they want *more* materials) and learned that this was the happy solution to the problems indicated—basically the difference of learning speed and of drive.

**AN EXTRAORDINARY  
PROGRAM IN LIVING**

# AMERICAN HISTORY!

## THE PROGRAM

A RARE COMBINATION OF 4 VERSATILE TEACHING TOOLS OF UNMATCHED POWER, AUTHENTICITY AND SCHOLASTIC EXCELLENCE . . . CREATED BY A DISTINGUISHED STAFF OF HISTORIANS, VISUAL EDUCATION EXPERTS AND RECOGNIZED AUTHORITIES IN SPECIALIZED FIELDS . . .

Here is history, projected in dramatic word and brilliant image, *telling* and *showing* America's great story with an excitement and conviction never before achieved. Scrupulously designed to enrich American history and many other courses of study, this four point program of books and filmstrips is a comprehensive and unique apparatus to develop understanding and help to build enlightened citizens.

## THE FILMSTRIPS

Two award-winning series created under the editorial direction of  
RALPH H. GABRIEL, Sterling Professor of History Emeritus, Yale University

★ **THE CHRONICLES OF  
AMERICA FILMSTRIPS**  
15 units

This newest series has already won exceptional stature—and well earned! Largely based upon the books and motion pictures of the same name, its realism brings our Country's history to graphic life, from discovery through civil war. Its dynamic images have been likened to "adventures in democracy."

\$97.50 complete or \$7.00 each  
Comprehensive TEACHER'S GUIDE free

★ **THE PAGEANT OF  
AMERICA FILMSTRIPS**  
30 units

Broad in scope as their companion volumes, these documentary filmstrips have opened new vistas of teaching effectiveness throughout the entire curriculum. Each unit portrays a historical drama in America's growth to a world power; together these striking re-enactments span five centuries, from aboriginal Indian to Atomic Age.

\$195.00 complete or \$7.00 each  
TEACHER'S GUIDE free with each unit

## THE BOOKS

★ **THE CHRONICLES  
OF AMERICA**  
56 volumes

Edited by Allen Johnson and Allan Nevins

Interest-sustaining accounts of the titans and forces that struggled in our past to forge America's present. Each volume is a milestone in *action*—from Red Man to the aftermath of VJ Day—authentic, accurate, written in gripping narrative form. Most wanted in every class—a "must" in every library—good reading!

\$199.00 complete or \$3.95 per volume

★ **THE PAGEANT  
OF AMERICA**  
15 volumes

Edited by Ralph H. Gabriel

Picture journals of our history as fresh as today's news! Directed in orderly progression by enjoyable, scholarly text, thousands and thousands (11,500) of timeless illustrations trace the molding of our nation. A treasure-trove of fascinating information, professionally and expertly indexed. Fully tested for successful use at all levels.

\$147.75 complete or \$10.75 per volume

## NEW EQUIPMENT

### CAMERAS, Movies, TV

**All-transistor CCTV Camera** 6½x85 18 13"; wt 16lb; operates on 117v AC or 12.5v DC; eliminates tub microphonics; reduces radiation; simultaneous output of video and RF signals. Accessories now available include weatherproof housing, pan and tilt unit, remote controlled and manually controlled zoom lenses. PHILCO.

For more information circle No. 101 on return postal card.

**Kinescope Recorder** housed in and on an office desk, a practical method of storing on film special instructional telecasts for future reference. Complete with camera \$6800; less camera \$2800; off the air tuner \$495. TUCNORD

For more information circle No. 102 on return postal card.

**"Observer" CCTV Camera System** provides two crystal-controlled RF outputs on any VHF channel plus one video output; self-mixing RF output circuits for multi-camera operation on one coaxial cable; self-regulating power supply to control all AC and DC voltages; 350-line resolution on each RF channel, 600-line video. BTL

For more information circle No. 103 on return postal card.

### CAMERA ACCESSORIES

**CCTV System.** Several auxiliary units now round out our previously listed Motorola line of 5 TV cameras (Oct. '59) and 21" classroom receiver (Jan. telephoto lenses (½" to 6") and an automatic zoom lens; weather-, dust- and explosion-proof housings; remote control mountings; pushbutton channel selector; AV mixer handling up to 10 monitors and several cameras; and line and distribution amplifier for distance transmission. MOTOROLA.

For more information circle No. 104 on return postal card.

**CCTV Talk-Back system** as developed for use in Penn. State University provides TV-teacher-controlled communication with receiving classroom; other ganged receiving rooms hear these questions and answers; TV-teacher can also monitor any one of the ganged receiving rooms; dual type PA speaker-mike handles question and answer in each room. Various ac-

cessories have been developed at this source; amplifiers, converters, detectors, filters, generators, etc. COMMENG.

For more information circle No. 105 on return postal card.

**Omnitar Telephoto Lens Systems**, range in focal length from 125mm to 1000 mm. Available also are monocular omniscopes for tracking finders; Shown above is the 600mm f5 lens assembly, complete with basic mount, filters, lens shade. \$595. BSCE

For more information circle No. 106 on return postal card.

**Projection Video Monitor** reportedly will project closed-circuit and over-the-air programs for large-screen requirements; dust-proof; safe from high voltage hazards. BTL

For more information circle No. 107 on return postal card.

### PROJECTORS, Movie, TV

**Auditorium TV**, a 12x16 foot picture. reportedly bright enough to allow room light level sufficient for note taking, exam writing. Compact, mobile, self-contained, "technically feasible for school use." GPL.

For more information circle No. 108 on return postal card.

### PROJECTION ACCESSORIES

**Polarizing spinner** gives motion effect to overhead still projection by means of revolving disc in light path above specially treated transparencies. The disc is edge-driven, its speed regulatable, its size 8"x9"x4". May be clamped to most Vue-Grapr models. \$85. BESELER.

For more information circle No. 109 on return postal card.

**Red-I-Frame Lensscreen** stretches on frame quickly assembled from tubular parts that pack compactly for shipping and storage. Polacoat rear-projection screen material is now available in any size from 4x5' to 40x80', at \$2.50 per sq. ft. POLACOAT

For more information circle No. 110 on return postal card.

### SOUND, EQUIPMENT & Accessories

**Dual-track "Minltape" recorder** delivers sync-sound with any motion picture camera, (8-16-35mm), spring or motor driven, by recording 60-cycle track parallel to the audio pickup track. The 60-cycle track, amplified, drives a synchronous motor on re-recorder or projector. STANCIL.

For more information circle No. 111 on return postal card.

**Magnematic Recorder** records up to 8 hours on cartridge load tape that eliminates threading. The recorder measures only 3½" in height. AMPCORP.

For more information circle No. 112 on return postal card.

**Personal Portable Public Address**, transistorized, weighs only 11 ounces and reportedly adequate for audience of 100 or more, recommended for meet-

The Portable PA

ings to pick up and amplify questions from floor. Powered by 9-volt mercury battery; 1¼ watt output; 5-year guarantee; \$110. MOORE.

For more information circle No. 113 on return postal card.

**Portable record player** 4-speed, 15 lbs, built-in 45" adapter, accommodates 12" records, 105-120 v. AC only, Model AV-1 gives 3 watts output, 5x7" speaker, \$49.95; Model AV-2 gives 6 watts output, 6x9" speaker, \$67.50. GRAFLEX.

See local dealer

**"Preceptor" Language Lab** offers 10 channels, provides for monitoring each student separately, listening in on master tape and student repetition, 2-way conversation with student, recording the student on central recorder and adding instructor's comment, and simultaneous "all-call" communication with entire class. RCA

For more information circle No. 114 on return postal card.

**"Packaged" Tape Teaching Lab** consists basically of monitor, power and program panels, tape recorders, microphones and headsets all engineered

**Alaska's  
Modern Agriculture**

Maps show Alaska's location and regions of varying climates. Historic scenes taken 25 years ago show how farming developed. World War II and Statehood have brought a new boom to Alaska, increasing the need for agriculture. Today, modern farming methods are replacing hand methods as the people adapt themselves to this challenging land. The film depicts the conservation and development of resources; recreation, transportation, education, interdependence of the people, opportunities for new settlers.

# ALL NEW FROM AMPEX

*In sound quality, in operating principle and in features, this is the compact professional recorder that will set the standards for all others. New in every detail and Ampex throughout, the PR-10 is all you expect of the name. It is a worthy companion of the big Ampex recorders that make the master tapes of nearly all the recorded performances sold in the world today. To a heritage of excellence, the PR-10 adds the completely new electrodynamic frictionless tape handling system that makes possible studio-quality performance in a compact machine. Your dealer has it. See it operate soon.*

**FEATURES AND ESSENTIAL DATA** PR-10-2 stereo/monophonic model records and plays back stereo-  
namic, monophonic, sound-on-sound, cue-track, selective track and mixed or unmixed two-microphone sound • PR-10-1  
monophonic available full track or half track • Pushbutton controls of professional relay/solenoid type • Full remote control  
provisions and accessory remote unit • New automatic 2-second threading accessory, optional • All new compact  
electronics • Professional monitoring includes A-B switches, VU meters, phone jacks and output circuits • Separate erase,  
record and play heads • 4-track stereo playback optional on open fourth head position • Two speeds with options: 15 and  
7½ ips or 7½ and 3¾ ips • Hysteresis synchronous motor • Electrodynamic tape handling for lowest flutter ever in a  
portable/compact recorder • Plug-in modules for flexibility of equalization and input characteristics • Portable or rack  
mount • Dimensions for both models: 19" w by 14" h permitting easy replacement of many older rack recorders.

## PR-10

## The Cover Scene

This figure has been carved out of stone by an Eskimo artist. The film *The Eskimo in Life and Legend—the Living Stone* deals with his art pursuits and depicts the seal hunting activities of the Baffin Islands inhabitants. Photographed by Film Board of Canada. Produced by Encyclopaedia Britannica Films.

## The Authors

E. F. (Fred) Holliday is film commissioner of the province of Saskatchewan. His pioneering efforts in visual education in the city of Regina go back to 1935. Since that time he has served as supervisor of visual education and has reorganized and modernized the visual activities of the Department of Education.

Captain John B. Keeley is an instructor in the Department of Social Sciences at the United States Military Academy and is one of those responsible for the academy's very successful audiovisual program.

**11:00 A. M.**  
**This movie is really sharp! Not a light leak anywhere.**

REASON: The windows in this room are light-controlled with Flexalum Audio-Visual Blinds. These blinds make any room theatre-dark anytime. Here's why: (1) more slats per height plus (2) patented notch in each slat that permits adjacent slats to touch, equals (3) no between-slat light leaks. (4) Light-trap channels eliminate around-the-edge light leaks.

**11:10 A. M.**  
**The slides look great. Just enough light to take notes.**

REASON: You get just the degree of light control you need with Flexalum Audio-Visual Blinds. No other form of blackout covering allows you this flexibility. And Flexalum Audio-Visual Blinds will always stop and stay just where you want them. They're precision engineered to operate so flawlessly, they're guaranteed in writing for five full years.

**11:20 A. M.**  
**Back to groupwork. Full daylight, instantly—no glare.**

REASON: Nothing to take down, nothing to tug back. No wasted money for multiple coverings, no wasted classroom minutes. Flexalum Audio-Visual Blinds do the whole job — taking you from projection darkness to full light (or anything in between) with just a flick of a nylon cord. The plastic lined side channels eliminate all noisy flutter!

**Get full-range light control—at low cost—with *Flexalum*® Audio-Visual Blinds!**  
Bridgeport Brass Co., Hunter Douglas Division, 30 Grand St., Bridgeport 2, Conn.

## Bell & Howell "Specialist" projects slides or filmstrips brilliantly...even in semi-daylight!

The brilliant "750 Specialist" is specifically designed for today's brighter classrooms. The unique 750-watt lamp throws more light than any comparable projector—a full 950 lumens—enough light for brilliant showings even in semi-daylight! But illumination is only part of the story:

**The housing** is rugged die-cast aluminum. Unusually strong but *light*, it weighs only 9¼ lbs. without case.

**Highly versatile**, it projects single frame filmstrips or 2 x 2 slides . . . easily converts for automatic slide projection.

**A powerful 5" fan** assures cool operation, hour after hour.

**Specially designed** "smooth focus" lens gives razor sharp picture.

**Metal instruction plate** is permanently mounted on projector.

**Costs only \$129.95** with "air-flow" case and slide changer. The 500-watt "Specialist" multi-purpose projector is only \$89.95.

Write for private showing

Bell & Howell, 7117 McCormick Road, Chicago 45, Illinois.

Gentlemen:

I would very much like to see how the "Specialist" performs in our classroom. Please have your representative call for a demonstration appointment.

## AV industry news

### Lang Lab Editions

Folkways Records is issuing its language teaching materials in four different editions. The latest, a course of basic and intermediate French by Armand and Louise Begue, is a special "lab" edition recorded at 3-3/4 ips on top track only, leaving the lower half for student practice. Three tapes \$38.85. The same material dual track \$26.85; and at 7 1/2 ips \$38.85. Also an album of three 12-in. L.P. records \$20.85. In each case a 176-page illustrated book is included. The book is also sold separately at \$2.50.

Other Begue courses include Literature Readings in French, French Children's Songs for Teaching French and Conversational French.

### Lang Lab Research Planned

Bernco, Inc., electronics manufacturer, has entered the language laboratory field with a three-pronged research project that may prove of benefit to both users and this new industry as well.

One study will go into environmental conditions such as best location, lighting, ventilation, shape and layout of a school language lab. Another will analyze the instructional materials available from all sources and techniques of classroom application. The third will work on technical standards toward the announced goal of developing a composite factor that correlates present technical criteria (frequency response, signal to noise ratio, distortion, wow and flutter, etc.)

### Golden Anniversary

Congratulations to Victor Animagraph Corporation on its 50th anniversary. A long list of "firsts" in the development of audiovisual equipment and materials stands to the credit of this pioneer leader in the AV industry.

### "Graflex Audiovisual Digest"

Graflex is offering a 48-page book with 4-color cover, edited by James M. Meagher, coordinator of audiovisual materials for the Penfield (N. Y.) Central Schools. The book carries articles on slide and filmstrips making and use, 16mm films, records, tapes, reading trainers, overheads and

opaque, and television. (Five of the articles appeared originally in *Educational Screen & Audiovisual Guide*). The last seven pages tell of Graflex equipment in terms of application to the techniques and purposes outlined in the body of the book. One of the best industry-produced publications since the days of the late Marie Witham's (SVE) annual.

### Institutional-Pictura-Almanac

Institutional Cinema Service, one of the oldest sources of rental films in this country, is now under the joint ownership of Harold Baumstone (Almanac Films) and Roslyn Appelbaum (Pictura Films). All three enterprises are operated from Institutional's address, 41 Union Square West, New York 3.

### Grad Class Gift: Films

The graduating class of the J. Sterling Morton Township High School, Cicero, Ill., bought \$2,000 worth of EBF films as a gift to the school. Supplemented by \$880 from the budget of AV director Bohumil Mikula, this bought the 12 completed half-hour films in Britannica's "Humanities Series."

### Name Changes

Berndt-Bach, Inc., is now Bach Auricon, Inc., address unchanged.

Television Equipment Co., Chicago, now Behrend Cine Corp., address also the same.

### Compatible Color Processing

Eastman has just announced a new Ektachrome reversal print film that can be locally processed through the same equipment and chemicals used for their new (daylight 160, tungsten 125) color reversal camera film. This point-of-use processing will save time and tend to check the temptation to project irreplaceable original camera footage. The 16mm print stock is called Type 7386, the 35mm Type 5386

### Needles!

The diversity of the audiovisual and home and professional audio market is reflected in an announcement by Astatic Corporation that there are now more than 450 different record-player needles in its line, each labeled in detail and packaged for handy filing. The extent of the market is glimpsed in the announcement that to date nearly 150 million cartridges have been made and sold by this one source.

### Air Force Teaching Machines

Western Design, a division of U. S. Industries, Inc., has received from the U. S. Air Force a contract for 18 auto

use the  
**SCHOOL MASTER<sup>®</sup>**  
COMBINATION FILMSTRIP  
and 2 x 2 SLIDE PROJECTOR

Yes! When there's a lesson to teach or a story to tell, more and more educators are selecting the famous Graflex School Master.

School Masters provide an unusually high screen brilliance that: (1) allows projection in a room that's not completely darkened (saves buying room-darkening devices) and, (2) is easier on young eyes, more effective on young minds.

Change from filmstrips to slides in seconds—no tools, no extra parts required • Optical system removes as a unit for easy cleaning • Threading and framing is easy • Exclusive built-in handle facilitates carrying • A line of accessories that increases the use and the value (but not the cost) of the School Master—makes it the most flexible piece of equipment in your instructional aids. 500 watt and 750 watt manual or remote control models are priced from \$84.50.

For additional information contact your Graflex Audio-visual dealer or, write Dept. ES-100, Graflex, Inc., Rochester 3, N. Y. Prices are subject to change without notice.

matic teaching machines. The "Auto-Tutor" will be tested by the U. S. Air Force in training in basic electronics.

Signing of a prime contract with the Air Force was announced by H. C. Bream, president and general manager of Western Design, whose personnel developed the AutoTutor.

### Service!

Each monthly customer - prospective mailing of the George W. Colburn Laboratories encloses an association of Commerce leaflet on what's doing in Chicago, plus an offer to look after hotel reservations, show and ball game tickets, etc.

### People—

*Ralph Steetle*, for nine years executive director of the Joint Committee of Educational Television, goes to the Oregon System of Higher Education this month as associate dean of the general extension division.

*Hugh J. Daly* has been named vice president for Magnecord sales, at the Midwestern Electronics plant at Tulsa, Okla. Daly had been Magnecord sales manager at Chicago prior to the firm's purchase by Midwestern. Daly is a well-known figure in recording industry affairs, board member and chairman of the MRIA committee on public relations.

The Rev. *Albert C. Johnson*, American Bible Society's assistant secretary for audiovisuals for the past 13 years, has accepted the post of secretary of Cathedral Press, New York City.

*George Hamilton*, president of Keystone View Company, will be honored by having the new library at Edinboro State College bear his name. It will be the largest and most up-to-date library in northwestern Pennsylvania, with 100,000 volumes housed on open stacks and facilities including music-listening rooms and individual student cubicles. Hamilton, former Rhode Island scholar, taught school and worked as a publishing executive. He has been with Keystone View since 1919.

*William S. Vaughn* is the new president of Eastman Kodak Company. *Albert K. Chapman*, his predecessor since 1952, is now vice chairman of the board. Vice president *M. Wren Gabel* takes Mr. Vaughn's former spot as general manager.

*Don White*, NAVA executive vice president testified before the House committee on post office and civil service in opposition to proposals to increase postage rates on educational materials and library materials. He pointed out that the increase on average shipment would amount to as much as 122 percent on library materials and that the burden would be borne entirely by educational, religious and other non-profit cultural groups.

*Dr. B. F. Jackson, Jr.*, is the new chairman of the National Council of Churches' committee on audiovisual and broadcast education, and continues as chairman of the religious education section of DAVI-NEA.

LEARNING BY SEEING

## PHILCO advances the science of visual education

**WITH NEW TRANSISTORIZED CLOSED CIRCUIT TV SYSTEMS**

Visual education, through the use of closed circuit TV, is being adopted rapidly by schools throughout the nation. Philco's broad experience in educational TV is your assurance of obtaining the greatest flexibility and economy. Philco's new all-transistor equipment is your guarantee of maximum reliability, freedom from maintenance and ease of operation. Write today for information and your copy of the Philco Closed Circuit TV Systems Planning Guide.

Famous for Quality the World Over

# HOW TO TEACH MORE EFFECTIVELY WITH AN OVERHEAD TRANSPARENCY PROJECTOR

*An important visual aids primer -- clip and save it*

As a person who uses and is often called upon to advise in the selection of visual aids equipment, it is essential that you become familiar with the many advantages of overhead projection techniques—how it can make your teaching even more effective, how it helps the student to grasp and to retain ideas, how it increases the scope of your subject matter.

For many teachers the prime advantage of the overhead transparency projector is the fact that it is the only type of projection equipment that is designed to be operated in broad daylight. The ordinary classroom becomes a theater without turning out the lights or drawing the shades. Of course, you must have a projector that provides the maximum screen light required to retain detail and color. Projection Optics' Transpaque Jr., for instance, provides up to three times more light on the screen than any other projector of its type. Transpaque Jr.'s exclusive optical system has completely eliminated a serious overhead projection problem — the distracting rings that have always appeared on the screen.

## Up-Front Projection

With this teaching tool, both you and the projector are at the head of the class. As you teach, you face your students. You can gauge their reactions, spot questions immediately; students can take notes and you can refer to yours. Remember, the lights are on! In short, with the Transpaque Jr. you retain all the advantages of a classroom environment.

The very small profile of Transpaque Jr., especially the projection

head, makes every seat usable. There is nothing obstructing your view of the class. Every student is able to see both you and the screen. The more compact Transpaque Jr. is also easily portable.

Superimpose transparency over transparency, building a progressive story before the eyes of your class. Transpaque Jr. retains the brilliance

and color even through multi-colored overlays. Each transparency has a large 10" x 10" format. You can tailor-make them yourself, simply and inexpensively. You can buy them already prepared, covering a multitude of subjects.

## Write As You Speak

To create large screen images of your notes or ideas, just write in your normal size script on a transparency. It is projected as you write,

just behind you on the screen. You can draw lines, write clarifying remarks, circle areas of special interest. Your individual technique is as unlimited as your own imagination. There is no squeaky chalk or tiresome blackboard work. Use the roll of transparent film. Write on it and roll it away for a continuous supply of clean writing surface.

Transpaque Jr. is UL-CSA approved. It is easy to operate and trouble-free. For a free demonstration or additional information, write to

**Projection Optics Co., Inc.**  
276 Eleventh Avenue  
East Orange, New Jersey

In Canada, Anglophoto, Ltd., 880  
Champagne Ave., Montreal, Quebec.

## William Lewin

The passing of William Lewin, veteran educator-publicist, at 71, represents a grievous loss to the audiovisual movement to which he devoted long and dedicated service. He will be best remembered as editor-publisher of *Audio-Visual Guide*, merged in 1956 with *Educational Screen* to form this publication.

Yet this magazine was but one facet of his many AV activities, the means rather than the end in effectuating a lifelong philosophy that saw the motion picture in all its forms as the major communication of our culture.

Contemporaries privileged to know his work will recognize four of his many contributions as especially significant:

(1) His leadership in the photoplay appreciation movement was reflected in his doctoral thesis *Photoplay Appreciation in American High Schools*, in his original film study courses and in his publication of the long series of detailed, illustrated photoplay discussion guides that appeared in virtually every issue of his magazine. There were, reportedly, ten million reprints of 250 such guides put into circulation.

William Lewin

(2) His recommendations to ERPI, after completing a nation-wide test of their initial sound films, that these be brought much closer to the curriculum, even to the extent of buying motion picture rights to widely accepted textbooks, were not followed. Had they been, better films might have been made—much sooner.

(3) Under sponsorship of the Department of Secondary Teachers, NEA, which he served as president in 1949, he initiated the *National Audiovisual Education Week* movement, officially proclaimed by governors and mayors from coast to coast, and tied in with his National Audiovisual Awards and “pilot” school demonstration center projects. While the goal of 500 such centers may not have been reached, enough came into being to provide an almost inexhaustible flow of local case histories of praiseworthy AV achievement to enliven a long sequence of magazine issues.

His steering committee and other organization forms drew the cooperation of A-V activists on all levels. When some AV professionals gave this effort less than complete endorsement, particularly that phase which rewarded pilot school “winners” with some \$40,000 worth of equipment and other materials donated for this purpose by commercial interests, he rejected this criticism with—“Let us not be hindered by self-seeking pedagogical politicians nor by educational isolationists in ivory towers.”

(4) His sustained publication of *Who's Who in Audiovisual Education*, a series of almost 100 pen pictures of active workers in this field, is today a priceless reservoir of historical data. At the time of publication, it provided a means of getting acquainted with many AV co-workers who might otherwise never have “met.” This “Who's Who” series reflected clearly Lewin's basic concept of the oneness of the entire audiovisual medium. Campus and commerce were included side by side; he published a parallel (though smaller) *Who's Who in Radio Education*, and made a beginning of similar coverage of television education.

Front covers of his magazine usually carried an attention-getting picture from a current theatrical feature film, generally one receiving discussion guide treatment in the same issue.

Emphasis was on discussion. The magazine originally called *Group Discussion Guide* was later named *Film and Radio Discussion Guide*, with side boxes specifying “Radio and Newspaper” and “Film and Theatre.”

Truly, here was a man of many sides. High school teacher, publisher, prolific writer, non-conformist in some of the professional organization niceties, strong-willed, utterly unsparing of his strength and talents, often misunderstood and sometimes misunderstood, a man who gave his all—always—to his cause, the cause of audiovisual communication.

## In-School Study of French Via TV Now Under Way

“Parlons Francais,” the first in-school course of instruction ever offered on a national basis via television was inaugurated in September on 16 educational TV stations throughout the United States. The program is being sponsored by Louis de Rochemont Associates.

The series will be distributed through the facilities of the non-profit National Education Television and Radio Center.

It was tried last year on an experimental basis over Boston's WGBH-TV when it was telecast into 1,200 classrooms with 35,000 youngsters participating.

## U. of Wisconsin Educator To Korea As AV Aid

Dr. Frederick A. White, associate professor of education and director of the University of Wisconsin Extension Bureau of Audio-Visual Instruction has taken a one-year leave of absence to serve as a consultant to the Korean ministry of education.

Dr. White will work as a specialist in audiovisual utilization with teacher training institutions throughout the Republic of Korea. This project, begun in 1958, is under the direction of Syracuse University for the U. S. Department of State's International Cooperation Administration. In Korea Dr. White will carry on the work started two years ago by Dr. Gilbert Tauffner of the University of Kentucky and Dr. Maurice T. Iverson of the University of Wisconsin.

Bell Telephone Laboratories presents...

# TWO NEW FILMS FOR SCIENCE AND ENGINEERING EDUCATION

Dr. John N. Shive, using torsion wave machine which he designed, demonstrates the behavior of waves in various mechanical, electrical, acoustical, and optical wave systems.

Bell Laboratories now makes available two new sound motion pictures for college-level education. The films, "Memory Devices" and "Similarities in Wave Behavior," provide another opportunity for you to share new knowledge with Bell Laboratories scientists. The Bell-produced films contain no advertising and are loaned without charge.

In the film, "Similarities in Wave Behavior" (26½ minutes), Dr. J. N. Shive of Bell Laboratories demonstrates and discusses wave behavior

using torsion wave machines which he designed.

"Memory Devices" (27 minutes, color) shows some of the principal types of storage devices used in computer memories and explains how binary information is stored in them.

Send for both films or for any of the audio-visual aids previously produced by Bell Laboratories (see box). Write to Director of Educational Films, Dept. 22C, Bell Telephone Laboratories, 463 West Street, New York 14, N. Y. All requests will receive prompt attention.

## OTHER EDUCATIONAL MATERIALS PRODUCED BY BELL LABORATORIES

**FILMS** "Crystals — An Introduction," 16 mm color, sound, 25 minutes. Introduces the subject of crystals by demonstrating the orderly arrangement of atoms in the crystalline state and the relation of this arrangement to the physical properties of the substances.

"Brattain on Semiconductor Physics," 16 mm, black and white, sound, 30 minutes. Walter H. Brattain, Nobel Laureate in Physics, gives an introductory college-level lecture on the physics of semiconductors with demonstrations.

**FILMSTRIPS** "The Formation of Ferromagnetic

**Domains,"** color, 132 frames, 33 1/3 records, 45 minutes. Discusses the physical principles of domain formation with particular emphasis on the energies involved

"**Zone Melting,"** color, 133 frames, 33 1/3 records, 45 minutes. Describes a new method of ultra-purifying solids and controlling the distribution of impurities in solids.

**RECORDS** "The Science of Sound," two 33 1/3 rpm microgroove recordings, 90 minutes. Using 19 separate bands, this album demonstrates and explains fundamentals of acoustic phenomena.

WORLD CENTER OF COMMUNICATIONS RESEARCH AND DEVELOPMENT

## Industrial AV Exhibition In New York Oct. 10-13

A sizable array of audiovisual equipment and services will be on display at the fourth annual Industrial Film & A-V Exhibition to be held October 10-13 in New York City. The exhibit will cover the full range of audiovisual materials and accessories used in business and industry, in government and the armed forces, in education, religious instruction, in civic and welfare training programs, and in medical and health services.

Several industrial and business groups will hold seminars and workshops sessions during the show. These include the Industrial Audio-Visual Association and the board of directors of the National Visual Presentation Association.

## Dr. Mees, Science Pioneer and Eastman VP, Dies at 78

Dr. C. E. Kenneth Mees, internationally famous scientist and retired vice president for research for Eastman Kodak Company, died August 15 in Honolulu, Hawaii, where he had lived since his retirement in 1955. He was 78.

One of the pioneers of American industrial science, Dr. Mees had guided Eastman Kodak research for nearly 44 years following his organization of Kodak Research Laboratories for the company in Rochester, N. Y., in 1912.

Known for his work in photographic science and as an authority on complex color photography processes, Dr. Mees has also been cited as the "warm-hearted and understanding friend of the ordinary snaphooter," the man who knows little of photography but simply wants a good picture of family and friends.

How training device techniques used in aircraft and missiles industry could be applied to the academic field was studied by Claremont (Calif.) College graduate class in Audiovisual Aids during a recent tour of Lockheed Aircraft Service Special Devices division. Professor William Blanchard, summer session director of Audiovisual Aids for the college, is shown operating an F-104 Starfighter training panel manufactured by the division at Ontario, Calif. In center is C. T. Thum, Special Devices division manager, with a Lockheed inspector, left, pointing out features on the panel.

## Montana Receives TV Grant From Ford Foundation

The Montana Educational Television Committee is the recipient of a \$21,450 grant from the Ford Foundation, it has been announced by Montana superintendent of public instruction Harriet Miller and Dr. Erling S. Jorgensen, chairman of the committee.

The grant will make it possible, it was said, to carry out a study of Montana's educational needs and how they can best be met through television instruction. It will permit basic planning for the development of ETV in Montana and for the eventual activation of the six television channels reserved for educational use in Montana.

Dr. Jorgensen, director of radio-television studios and associate professor of journalism at Montana State University, Missoula, will take a year's leave of absence from his university

post to head the project. The Ford grant will be administered by Montana State University.

"We are grateful to the Ford Foundation for making it possible for the committee to begin a systematic development of this new educational medium," Jorgensen said. "I believe educational television has a great potential for significant use in Montana."

## Film Production Program Started By U. of California

University of California Extension has begun a study program in motion picture production. The first two evening courses in the program, "Basic Principles of Motion Picture Production" and "Workshop in Television and Film Scripting," began the week of September 19 at the U.C. Extension Center in San Francisco.

Courses now in the planning stage will deal with mass media problems, cinematography, television production, experimental films and films as an art form.

"Horizons of Science," a series of ten educational films was presented recently to the Massachusetts Department of Education's Office of Audiovisual Services by the John Hancock Mutual Life Insurance Company. Richard P. Waters, left, a vice president of John Hancock, makes the presentation to Dr. Owen B. Kiernan, Massachusetts Commissioner of Education. Present are Kelsey B. Sweatt and Jesse Richardson of the department.

### Two AV Books Available

Educational Screen has a limited supply of two volumes, *Picture Values in Education*, and *Comparative Effectiveness of Some Visual Aids in Seventh Grade Instruction*, both by Joseph J. Weber. One or both are available upon written request at a cost of one dollar each to cover postage and handling.

# "FIRST THE EAR..."

Now, hear first-hand  
how tape recordings help teachers  
put new life into language studies!

Now, a special tape recording. "First the Ear . . .", tells the exciting success story of the use of magnetic tape in today's language classrooms! With this new 30-minute tape from 3M Company, you hear first-hand accounts from instructors who now use tape to win keen student interest, enthusiasm and concentration . . . in both modern and classical languages, both beginning and advanced courses.

Whether you have a language laboratory, as shown at left, or simply use portable tape recorders, you'll find many valuable teaching ideas by listening to this new tape. For example, it tells how students become more proficient by hearing many native voices and accents . . . tells how both you and your students can better evaluate individual achievement . . . tells how you can pre-record practice drills, then spend more time making corrections and working with individual students.

"First the Ear . . .", prepared for professional educators with the counsel and participation of leading language instructors, is available to you for only \$1.50. Just return the coupon below to 3M Company . . . manufacturers of professional-quality "SCOTCH" BRAND Tapes, famous for perfect sound reproduction and available in a variety of types to meet all recording requirements.

# Religious Conference at Boulder Stresses Training

For another review of this meeting see the feature "AV in the Church Field," page 553.

**T**HE 17th annual international conference on the use of audiovisual communication media, held on the University of Colorado campus August 17-23, put special emphasis on improved training for AV workers on all levels, from local church to international agencies. The conference, in its final summation, recommended holding specialized "convocations" for area, denominational and national AV specialists, with an agenda limited to training matters.

Next year's AV "consultation," however, will follow the traditional pattern of fellowship and joint study of AV concerns common to all religious education workers from local church to top agencies, and including also equipment manufacturers and materials producers. This will be held at Green Lake, Wisconsin, September 3-9, 1961.

Attendance at the Colorado meeting was by invitation extended by the Department of Audiovisual and Broadcast Education of the National Council of Churches to 150 leading AV activists; 145 attended.

James D. Finn, president of Department of Audiovisual Instruction, NEA, keynoter at the opening session, spoke of new electronic devices used in industry and secular education.

Robert deKiefer and Don Ely of

Colorado and Syracuse universities, respectively, led the general sessions on communication philosophy and techniques. Their extensive use of all kinds of visualization devices in their own presentations helped set a pattern for virtually all the rest of the program.

The overhead projector was most extensively used, although many of its projections were verbal rather than pictorial or symbolic. Effectively used also were motion pictures, filmstrips, flannel boards, presentation easels, blackboards, and realia that included even a barnyard shovel brought in by the chaplain, the Rev. Malcolm Boyd, who conducted the daily vesper services.

Surveys conducted among regional and denominational AV centers on their training practices and results were discussed in detail by small work groups. The plenary session concurred in their recommendations that utilization training be developed for each of the three major levels of church work (local, regional and national).

Emphasis was placed on bettering the use of the existing materials now admittedly in excellent supply and

good quality. At the local church and council level there is to be stress on operational skills and on selection and evaluation of materials. This would continue into the training of the regional cadres but with heavier emphasis on learning and communication theory, knowledge of AV resources and familiarity with training techniques. These requirements, in turn, would extend up into the training programs for national leadership, with such added subjects as contemporary research and technological developments.

Among the leaders in the various general sessions were Alva I. Cox, Jr.; Don Kilphart; Scott Mitchell, Porter Bower, William F. Fore; Beveral Chain; Arthur Lomas; George Heimrich and Edward George.

An innovation at this year's meeting was a series of film "analyses in depth" by psychologist Dr. Elaine Tracy and the chaplain, the Rev. Malcolm Boyd. They discussed in considerable detail the psychological and moralistic overtones in the story treatment and characterizations by the two analysts, and this discussion was continued actively by the audience. The entire program of this year's "consultation" was marked by maximum audience participation and by a unanimous concern for better usage of audiovisuals in all levels of church work.

WFK

## Trolinger Tape Added to AV Archives

Reminiscences of early days in the audiovisual activities at the University of Colorado were recorded in a taped interview with Miss Lelia Trolinger, who headed this work from 1923 until her retirement in 1956. Her successor, Dr. Robert deKiefer, introduced the interview, and William F. Kruse, DAVI archivist, guided Miss Trolinger in telling her story.

In 1923 a young mathematics teacher who came to the Boulder campus for her degree and stayed on to teach in the local high school, somewhat hesitantly took the job of secretary of the university extension division's Bureau of Visual Instruction. Intending to try it "for just a year" (especially since the pay was lower than that of a math teacher), she came in just in time to be sent to the NEA convention at which DAVI achieved departmental status. Later, during World War II, she served as national secretary-treasurer of the department.

Hale, hearty and jolly, "Trolly" maintains an active well-wisher interest in the great growth of the department she headed so many years, an inspiration to the younger cadres now

Prior to taping of recollection, memories: from left, Kruse, Trolinger, de Kiefer.

carrying on the ever-expanding work. CCTV, tape duplicating services, and vastly increased resources of materials of all kinds have burgeoned since her retirement, but the helpful-to-all philosophy of her department remains unchanged.

## MAGNETIC TAPE ERASER

A Language Laboratory Must!

Bulk erasure of dual tracks

Erases recorded signals and noise from magnetic tape without rewinding. Spindle mounting of reel permits rapid coverage without missed spots. Noise level reduced below level of standard erase heads. Restores tape to like new condition or better. Reel size range 5", 7", 10½". May also be used for demagnetizing record—playback—erase heads.

Model HD-11 Price \$27.50

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

*A scene in the filmstrip starring Kirk Douglas as Ulysses.*

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson In Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50. With guide, \$7.80.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, black-and-white, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, full color, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50. With guide, \$7.80.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$4.00.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

10 Brainerd Road, Summit, New Jersey

# Film Rental Librarians Discuss Industry Issues

THE 25th anniversary of film rental libraries specializing in recreational motion pictures was observed in a two-day conference under the auspices of the National Audio-Visual Association, on August 3 and 4. Close to 100 operators and staff members attended the meeting at the suburban Moraine Hotel, north of Chicago, just prior to the 20th annual National Audiovisual Convention.

Program chairman Carl Nater (Walt Disney Productions) opened the session with a talk on "How to Recognize an Entertainment Film Library." This was followed by a visualized presentation on new markets and services by Alan Twyman (Dayton, Ohio), who told of his own rental library beginnings a quarter-century ago when projector owners were few and good 16mm sound films fewer.

Twyman topped a pre-conference contest by naming 167 specific fields of use for 16mm entertainment. Additions from other contestants brought the list up to 272, and this was further increased by several score other listings brought out in the very active floor discussion that prevailed throughout the conference. No less than 48 separate use areas were disclosed in schools and colleges along; 15 areas in religious institutions.

The banquet that evening was addressed by NAVA president Bill Kirtley and NAVA executive vice-president Don White. Toby Chandler (Film Center, Washington, D. C.) was master of ceremonies.

The second morning's session had as discussion leaders Lennie Deacom (Ideal Pictures, Los Angeles) on personal service for the walk-in customer; Mike Nuzzola (Films, Inc., Chicago) on the economics of field salesmen; Yolanda Salla (Association Films) on telephone service; Toby Chandler on catalog production; Bill Rayner (Swank Films) on promotional letter writing.

Paul Foght, general chairman of the NAVA entertainment film committee and president of the Ideal Pictures network of 28 libraries, gave an excellent Ozalid-visualized report on a survey of the business practices of his organization, under the heading of "The Dollars and Sense of the Entertainment Film Business."

Thomas J. Brandon, assisted by

past presidents D. T. Davis and Bill Kruse, made the concluding presentation on the self-chosen theme of "The Fabulous Invalid of Remarkable Potency." His potent "invalid" was the theatrical motion picture industry. Brandon discussed its remarkable recovery, thanks to bigger and better pictures, and the lessons to be drawn by its non-theatrical sibling.

According to the speaker, 1960 is birth of the independent 16mm en-birth of the independent 16mm entertainment film rental library, but also of the publication of some of Edgar Dale's "Payne Fund" studies on the impact of the motion picture on our culture. He urged that such studies be now renewed with special emphasis by high schools and colleges and by the educational press on the feature length film. The high schools that pay any attention to motion picture appreciation number less than one in 100.

Brandon's suggestions that the AV trade organization, NAVA, be urged to give greater attention to the importance of film as film and to the

Thomas J. Brandon, left, introduced by D. T. Davis.

Lennie Deacom, left, and Carl Nater.

importance of its economic and cultural image won unanimous approach. Answers to a questionnaire filled out by the participants are to be collated and the findings reported to the NAVA board of directors.

The conference was remarkable not only as the largest of its kind in many years but also as a forum for sharing techniques and experiences developed by business rivals in a highly competitive commercial calling. Unlike earlier gatherings, no time was wasted here in jeremiads over wicked price cutters and hardhearted purveyors of new products. Instead, emphasis throughout was on the manifold consumer areas that good recreational films would benefit, to the resultant benefit to all engaged in the business of meeting these needs. Far from being deplored, commercial competition was viewed as a contribution to overall growth from which all would benefit—those served and all who serve them.

## AV Show in Review "Big," "New," "Most"

The 20th annual National Audio-visual Convention marked a new high in number of exhibitors, booths and attendance.

The highlight this year was the emphasis on language laboratories and their component tape recorders, furniture, microphones and other accessories. One exhibitor eliminated wiring by means of a citizen-band, low-power transmitter.

Eight millimeter sound-on-film was demonstrated in the Fairchild booth and also mentioned somewhat incidentally by Eastman and Paillard. While there was no very heavy emphasis on teaching machines, some typical written-response, multiple-choice, sleep-teach, and tachistoscopic examples were demonstrated.

Graflex unveiled a completely new 16mm sound projector to replace its Ampro line. It offers a reflector-type 250-watt lamp which reportedly gives 500 lumens and passes part of the heat rays back through its reflector. Adjustable lamp brilliance and a palm-sized, transistorized, slide-in amplifier are among other new features.

The Sawyer "film-disc," mounting 14 16mm color pictures in cardboard wheel for individual viewing or small-group projection, is soon to be put into national distribution after several years of use in test situations. The countless thousands of "Viewmaster" discs and viewers in home use will ease its introductions into school and church when the full program is launched. This handy little device may prove of major help in adding visuals to teaching machine "programming."

A close second in number of exhibits was a "service" group including projector and TV tables and carts, presentation easels, flannel boards, display racks, storage cabinets and containers, etc. The interest of producers and dealers in these broader lines reflects a growing ability and interest on the part of audiovisual dealers to meet the entire, ever-broadening needs of school, church and industry customers.

Most encouraging at this year's meeting was the emphasis on industry use of audiovisuals, not only in meetings of NAVA's Industry and Business Council but also in the general session in which three faculty members from San Jose State Teachers College made a presentation on "Selling to Industry."

Trade show attendance by top-level consumer groups was swelled by a number of contiguous special interest

meetings. The Industrial Audio-Visual Association, Industrial Training Directors, and Medical and Allied Sciences groups followed their usual pattern. An AV Education Forum was co-sponsored by several mid west professional educator groups. The AV Worship Service was followed by meetings of the NAVA Religious Council and of

the religious film libraries and dealers, but for the first time in years there was no church-user workshop.

DAVI held several committee and board meetings, and more national sales meetings than ever were scheduled by manufacturers, producers, and distributors. It was quite a show.

WFK

A session of the Audiovisual Education Forum.

Audiovisual Conference of Medical and Allied Sciences.

NAVA officers 1960-61: front row Harold A. Fischer, Photosound of Orlando, Orlando, Fla., second vice president; Harvey W. Marks, partner in the Visual Aid Center, Denver, Colo., president; Mahlon H. Martin, Jr., M. H. Martin Company, Massilon, Ohio, first vice president. Back row W. G. Kirtley, D. T. Davis Company of Louisville, Ky., outgoing president who now becomes chairman of the NAVA board of directors; Earl Harpster, Harpster Audio-Visual Equipment, Inc., Cleveland, Ohio, treasurer; Robert P. Abrams, Williams, Brown & Earle, Inc., Philadelphia, Pa., secretary.

**THIS IS AN INSTRUCTOR.** All the students can see her, but they can't see what it is she is talking about.

**BUT** add an Argus Direct-Wire TV Camera and Receiver and the object is suddenly 15 x 19 inches, so the whole class can see.

**ADD** another Direct-Wire TV Camera, and the instructor's hands and what they are doing are enlarged, too, on the very same screen. Extra receivers can show them to an auditorium.

**NO SPECIAL WIRING** necessary. The cameras and receivers are connected directly by standard co-axial cable. A simple switch chooses which camera "broadcasts."

**NO SPECIAL LIGHTING** is necessary. Ordinary room light works fine for pickup and viewing, and an electric eye adjusts for changing light.

**NO SPECIAL BUDGET** is necessary. The cameras cost just \$630 each with one-inch, f/1.9 lens. Non-electric-eye camera costs just \$595.

Monitors, telephoto and wide-angle lenses, co-axial switches and microscope attachments are all modestly priced, too. For a free booklet, "How to use Direct-Wire TV as a low cost educational tool," write to:

GENERAL TELEPHONE & ELECTRONICS

# Four Letter Words

*Paul C. Reed*

In this time of great change and technological advances in education, audiovisual departments in universities and school systems are finding present departmental names inadequate. For instance, DAVE, Department of Audio Visual Education does not define nor do justice to a modern, up-to-date audiovisual department that provides instructors with teaching machines, learning programs, language laboratories and television broadcasts. This time of broadening concepts of audiovisual services is a time for name changing.

As a service to audiovisual directors everywhere we offer the following suggestive list of new departmental titles from which they may choose or be stimulated:

- DAFT – Department of Apparatus For Teaching
- DAME – Department of Apparatus Materials and Equipment
- DAMN – Department of Audiovisual Materials and Nostrums
- DARE – Department of Audiovisual Resources for Education
- DATA – Department for Applying Technological Aids
- DATE – Department for Applying Technology to Education
- DAWN – Department of Audiovisual Wonders and Novelties
- DEAD – Department of Educational Aids and Devices
- DEAF – Department of Equipment Apparatus and Fittings
- DEBT – Department of Educational Bric-a-brac and Textbooks
- DEFT – Department of Educational Fittings and Trappings
- DICE – Department of Instructional Contrivances and Equipment
- DIRE – Department of Instructional Resources for Education
- DIRT – Department of Instructional Research and Technology
- DOER – Department Of Educational Resources
- DOLT – Department of Learning Technology
- DONE – Department of Odd and Nondescript Equipment
- DONT – Department Of Newer Tools
- DOPE – Department of Paraphernalia for Education
- DREG – Department of Resources and Educational Gear
- DRIP – Department of Resources for Instructional Process
- DUPE – Department of Utensils for Propulsive Education

You can readily see from this sampling that one cannot approach this name changing problem lightly. Careful and considerate thought must be given to the four letter words. The image that this word projects to your public can be striking!

And what about the four letter words if you have a Bureau instead of a Department? Well, we'll leave the "B" words for you to figure out.

**“This is how we help them remember more of what they see and hear in a movie.”**

“We take the view that most educational films have been prepared professionally, and as such can communicate subject matter worth learning.

“All that remains is for the children to open their minds to concentrate on and receive the message. Gaining their concentration is, we feel, a matter of shutting out distraction.

“Many of our movies, therefore, are shown in the quiet isolation of the auditorium, using a Kodak Pageant Projector. We selected our Pageant on the basis of its quietness, picture brilliance, and clarity of its sound. Its consistent performance helps keep young minds from wandering.

“Our reward is evidenced in the picture above. Good attentiveness, and — later — good recall of what they saw and heard.”

The picture above was taken using only that light reflecting from the screen while a movie was in progress. The projector that throws such a brilliant easy-to-see image on the screen is a Kodak Pageant Sound Projector, with its special Kodak Super 40 Shutter. With this shutter, the Kodak Pageant actually projects 40% more light onto the screen than projectors with ordinary shutters.

Your Kodak A-V dealer will demonstrate at your convenience, or write for Pageant Bulletin V3-22. No obligation.

*Says Lawrence Root,*  
Principal at the new Brighton District No. 1 Council Rock Elementary School, Rochester, New York, selected by A.A.S.A. for its exhibit of outstanding school designs:

*Kodak Pageant Projector*

**EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

# Saskatchewan's Vis-Ed Branch

by Fred Holliday

**S**ASKATCHEWAN'S audiovisual program has been in operation since the latter years of World War II. At that time, only a very few schools received service compared with the 4,763 classrooms that are today receiving regular shipments of instructional films.

There is justifiable reason for this expansion. The province of Saskatchewan, in 1960, is a wealthy province, rich in resources and people. Until 1945 Saskatchewan's economy was based almost solely on agriculture, and a crop failure was literally a provincial disaster. The farm population lived in constant fear of drought or early frost. Today the economic structure is changed. There are now many more oil wells in Saskatchewan than there are grain elevators.

Potash is mined in the midst of wheat fields and uranium serves the atomic age. Regina, the provincial capital, now has its steel mill and factories and the completion of the South Saskatchewan River dam will provide water and power for agriculture and industry.

It is almost 800 miles from the northern limits of Saskatchewan to the International boundary and 400 miles between the sister provinces of Alberta and Manitoba on the west and east respectively. Within the province live 900,000 people.

Enrolled in secondary schools are more than 400,000 pupils; over 3,000 are in private schools and nearly 152,000 in elementary schools. Tending the needs of these students are some 8,100 teachers.

Fred  
Holliday

The Saskatchewan Visual Education Branch has a staff of 16 and, with a theatre seating 30, covers almost 4,500 square feet of area in the Government Administration building in Regina. During the school year ended June 30, 1960, 13,115 shipments of film were made, and 33,800 individual films shipped.

A considerable proportion of our time is devoted to the evaluation of materials supplied by the distributors. Preview committees are composed of specialists in the various curricular fields. The committee's approval ensures purchase in accordance with available funds.

A booking room staff of 4 takes care of accessioning of films, handling booking files and preparing shipping orders. Teachers and other borrowers requisition their films every two months and, for some subjects, on a "spot booking" basis. In-service training of teachers and initial training at Teachers Colleges assists the teacher in base selection of films on need. With a short booking period, teachers have time for preview and the opportunity to integrate the film satisfactorily with the teaching program.

A carefully organized manual helps to determine availability of films at different grade levels. The Dewey-decimal classification number helps in locating films quickly. The success of any school film library, professional or otherwise, depends on adequate attention being given to film utilization. To ensure this, there must be cooperation between library staff and teachers.

Two male employees look after outgoing and incoming shipments. Film distribution is by mail as there are rural deliveries and post offices at remote points which are not reached by other methods of transportation. The Canada Post Office allows films to be returned free of charge if the Department's "reversal" postal card is used. There are well over 200 film shipments made daily during each semester.

The director and staff assume responsibility for the appointment of audiovisual co-ordinators in the larger schools throughout the province. These are, in turn, responsible for the training of teachers in the efficient use of projection materials to minimize film damage. Although most schools participate in an insurance scheme, an efficient film inspection system with four employees helps to prevent deterioration.

Our library maintains a good reporting system on film showings and classroom usage. This provides contact between the director and the teacher. From this the director and staff can ascertain whether the film has been used efficiently and if it serves the required purpose. The report also acts as a guide in the purchase of additional prints and in the withdrawal of those films which are considered inadequate. In short, the statistics obtained give a complete history of film usage.

The branch, of necessity, has an administrative section with a secretary and stenographic assistance to move correspondence speedily.

This June, all teachers in training have received practical instruction given during the year in the handling of equipment. Film and filmstrip libraries, film and filmstrip projectors

# talkback

films are  
unfinished  
dramas that  
leave the  
solution  
to you!

Talkback is a series of fifteen-minute dramas which presents 26 of the most vital problems in contemporary America. Since no solution is offered in the films, group discussion must determine the outcome. Talkback was created and produced for television release after exhaustive research, involving some 10,000 opinions and interviews, to bring into light major crises within families, businesses, colleges, and individuals. By popular demand it is now available for use by adult and youth study groups, civic, fraternal, church, and school organizations.

Educators who work with groups in self-education are quick to endorse Talkback because of its ability to stimulate creative thinking.

Talkback stars

Sheppard  
Strudwick

Howard Morris

Patty Duke

and many others.

See the Talkback display at the NAPSAE-AEA, USA Joint Conferences in Denver, Colorado, October 14-17.

1525 McGavock Street  
Nashville 3, Tennessee

through courtesy of certain distributors, were installed in each training college and student teachers were fully equipped audiovisually for their practice teaching periods. Following theory and practice tests, qualifying certificates were issued.

In addition to distributing films, filmstrips and 2x2 slides, and endeavouring to obtain the best utilization for these materials, the branch provides service in the field of non-projected aids also. Promotional use of chalkboards, bulletin boards, flannelgraphs, dioramas, etc., is carried on incidentally to the general program.

The Branch attempts to encourage research in the Audiovisual field and conducts workshops and institutes as a regular feature of its in-service training program.

Schools are encouraged to establish their own filmstrip libraries. Although about 300 filmstrip libraries have been set up in central locations, the core system is proving to be the most practicable.

An Audiovisual Board has been set up under authority of the Minister of Education for the Province. This board acts in an advisory capacity on all aspects of audiovisual aids in the schools, and with adult organizations in respect to films, radio and telecasts. Represented on the board are many prominent educational organizations, the University of Saskatchewan, the Saskatchewan Wheat Pool, the Federated Co-Operatives, the Provincial School Trustees Association, and the Saskatchewan Teachers Federation. Many of these groups purchase films for their own needs and leave them on deposit in the provincial library.

One may truly say that the teaching profession and the citizens of this province are film conscious and can adequately use films for their needs from a library established to give service. However, despite the best laid program in a challenging field, the important question still remains, "How can schools get all the films they need when they want them?"

The Visual Education branch of the provincial Department of Education has a staff of 16 in Regina.

The booking room staff handles files, receipt of films and preparation of shipping orders. Over 33,000 films were sent out during the school year 1959-60.

**And at West Point...**

THE value of audiovisual materials in modern education is becoming widely accepted. In keeping with this trend, the United States Military Academy has been increasingly active in the employment of these aids to improve the quality of instruction presented to cadets.

Before describing the manner in which the Department of Social Sciences employs these materials, it is necessary to point out several features of the academic system of the Academy which have a direct bearing upon the employment of audiovisual aids. First, the Academy has a prescribed curriculum, which means that between 500 and 600 cadets will study a particular course during the same semester. This simplifies the task of designing materials for instructional use and provides the economies of large-scale production of these materials. Second, each department has an even teaching load throughout the school year. This means the classrooms are continually in use, justifies the expenditure of funds to provide each classroom with the latest in audiovisual devices, and provides full time employment for personnel engaged in the design and production of audiovisual materials.

A third, and most significant, aspect of the academic system at West Point is the favorable ratio of instructors to students. The small classes (11 to 15 students per class) permit considerable flexibility in the use of audiovisual materials within the classroom. In contrast with many other institutions of higher learning, the Military Academy is not concerned with the problem of teaching more students with fewer instructors through the use of AV.

It is felt that audiovisual materials can make four significant contributions to the process of teaching. By appealing to the various senses they serve to:

1. Increase retention of material taught the student.
2. Speed the flow of information between the instructor and the student.
3. Provide a means for simplifying complex ideas and processes.
4. Stimulate a cadet's interest in the subject material and consequently hold his attention better in class.

Using these attributes of audiovisual aids, the objectives of the Department of Social Sciences are two-fold: first, to provide each instructor with the materials and devices to make him a

more effective teacher in the classroom and second, to stimulate and motivate cadet thinking along areas of cultural and educational value outside of the classroom through the use of selected audiovisual materials. With these objectives in mind, the department has organized its audiovisual program into three major functional activities.

The first of these activities, termed Teaching Aids, deals with the provision of audiovisual equipment and materials for use in the classroom. In this category are: record players, tape recorders, slide projectors, outline and wall maps blackboards, bulletin boards, and, very important transparencies for the overhead projector. Each classroom is provided with an overhead projector and it is probably the principal teaching aid in use by the instructors. The versatility of the transparency as an art medium coupled with the ease of use of the projector make the overhead projector the most suitable of all audiovisual devices for our purposes. It is in wide use throughout the Academy. In the past four years the Department has produced approximately 1,500 separate transparencies. Most of these have been produced in multiple copies giving a total library of approximately 13,000 transparencies for instructional use in the classroom.

The responsibility for the employment of audiovisual materials in support of a course is that of the officer in charge of the course\*; though all instructors are encouraged to recommend material which they feel will be of value. Every summer the material used to support each course is reviewed to determine its value for the coming year. Some material is discarded, some revised and some new material produced. This material is indexed and cross-indexed to provide easy reference to all material pertinent to a particular course. This is especially important since there is a broad area of overlap among many of the

---

\*Courses taught by Department of Social Sciences are: European & American History, U. S. Government, Contemporary Foreign Governments, Far Eastern History, Economics, Economics of National Security, and International Relations. Special courses for selected students are taught in Middle East History, Russian History, Diplomatic History, Political Philosophy, and National Security Problems.

# AV Instructs the Corps

Above, a lecture at the academy is enlivened by the use of a projected cartoon.

This is a bulletin board display contrasting the democratic and totalitarian systems.

A display illustrating Soviet and American competition in the less developed areas of the world.

courses (e.g., Geography, Economics, and International Relations).

The production of requested material is coordinated through the instructor who has been designated the "Teaching Aids Officer." Working under his direction is an illustrator who produces the majority of the original art work for signs, displays and transparency production. The production of this material and the maintenance and indexing of the large collection of audiovisual material already on hand is a full time job for the illustrator.

In addition to the illustrator, the department receives major support in the production of audiovisual material from the USMA Signal Center. This Center is capable of providing rapid and excellent service in the production of photos, transparencies, movie films and audio assistance (the center has a fully equipped recording studio). Other agencies at the Military Academy also provide assistance in the manufacture of three dimensional aids, bulletin boards, display frames, etc. As may well be imagined, the department's audiovisual program would be severely handicapped without the assistance of these agencies.

THE second functional activity, Curriculum Supporting Displays, is intended to reinforce the material taught in the classroom, and is responsible for the hallway bulletin boards, an automatic slide projector and the large display cases in the foyer of the academic building. This activity also provides display material illustrating department functions for homecoming weekend, open houses, and other appropriate occasions.

The officers in charge of the courses currently in progress are responsible for providing material for the hallway bulletin boards and the automatic slide projector. Materials for these media are keyed to the courses and normally emphasize a theme being taught in the course. For example, a set of 16 slides illustrating the factors generating inflation will be displayed at a time when the economics course is teaching this aspect of our economic system, or a photo display of the Depression will be mounted on the hallway bulletin board. Materials displayed here are normally rotated every week to ten days.

The large display cases in the foyer are used to present a more general theme related to the courses. The officer in charge of a course will determine the concept which he desires to have presented and briefly outlines how he feels that this may be best done. The officer responsible for this portion of the display program then coordinates this request with personnel from the West Point Museum. The Museum with material from its own stocks or borrowed from other institutions (e.g. The Museum of Natural History) creates and mounts the display in the foyer cases. Explanatory descriptions for the display are provided by the department. Typical displays might represent Elizabethan England or the history of weapons development in Europe. These displays are rotated every two weeks.

In conjunction with these aspects of the display program, the department also makes use of displays created by other institutions. Many very fine and valuable displays are available from

organizations such as the United Nations, the Federal Reserve Bank, the International Monetary Fund, and American corporations. Possibly a half dozen of these displays are utilized each year for varying periods of time.

The Great Films Program is the third of the department's activities. The Great Films Program commences in late January and runs until the middle of April. This is a period of less outdoor activity for the cadet, and for several reasons related to the poor weather and the long wait until summer is popularly called "gloom period." On two afternoons of each week during this time specially selected feature films are shown to the cadets. The films to be shown are selected with two objectives in mind. The first is to "bring to life" the issues and problems discussed in the classroom, thus stimulating the cadets' thinking and broadening their awareness of the problems of their country and the world in this period of crisis and change. The second objective is to broaden his appreciation of his own and others' cultures. Fortunately, many fine films serve to do both.

To accomplish the first objective, films such as *Mr. Smith Goes to Washington*, *All the King's Men* and *Triumph of the Will* (a Nazi propaganda film) are shown. Insofar as possible, the showing of these films is coordinated with material presently being taught in the classroom. The first two films mentioned above are shown in conjunction with the course in United States Government; *Triumph of the Will* is shown in conjunction with the course on European and American History.

To accomplish the second objective, films covering periods of history and films depicting life in other countries, such as *The Good Earth* and *Rashomon* are shown.

The film program has been quite successful both from the point of view of the department and of the cadets. Attendance of 400 or more cadets at a showing (strength of Corps is 2,400) is not unusual. Since attendance is voluntary; it is important, if the program is to succeed, that the films be of high quality and have entertainment value for the cadet. For these reasons, educational and documentary films, though technically quite accurate and providing comprehensive coverage of desired material, are not normally shown. One source of films which is often a happy blending of entertainment value and broad, accurate coverage of the material has yet to be fully exploited. These are the network television documentaries, which because of their topicality tend to be most valuable. Our Military History Department has been able to make extensive use of documentary films of World War II campaigns.

The officer in charge of the Great Films Program also coordinates the procurement of films to be shown in the classroom as part of the normal course of instruction. In the field of the social sciences, unfortunately the department has found few films appropriate for classroom use.

A last aspect of our audiovisual program, not falling directly under any of the activities mentioned above, is the utilization of the television facilities of our new academic building. During the course of the year, events of special signif-

icance to Americans are broadcast on television. Where possible in the busy schedule of the cadet, it is arranged that he be permitted to view these events in the happening. For example, in September, 1959, cadets were excused from classroom attendance to see and hear Premier Khrushchev's address to the National Press Club. Both cadets and instructors felt this worthwhile.

The activities and organization so briefly outlined above have evolved through time and experience. They will continue to be adapted to meeting changing circumstances and requirements. However, the provision of the latest in audiovisual materials and an organization to serve them is not enough to ensure an effective audiovisual program. Beyond the basic physical and equipment requirements, an effective AV program requires; (1) an understanding of the potential of the various media to be employed, (2) a knowledge of the type of instructional material suitable for audiovisual portrayal, and (3) an appreciation by the instructors of the value of audiovisual aids to instruction and also of the proper techniques for use of material available.

Much of the knowledge required to develop an effective audiovisual program can be acquired through experience, and the department has gathered much "lore" in this way. But experience is a slow and uncertain way of accumulating knowledge. The department has taken several steps to ensure that it is abreast of the latest developments in the audiovisual programs conducted by the Tecifax Corporation at Holyoke, Massachusetts. Here the newest in special audio-

visual developments can be seen.

During the year, also, we monitor developments through the USMA Signal Officer. Every summer the new instructors are given an orientation on the audiovisual materials available and the best techniques for using them. This last step is essential since a number of instructors have an almost instinctive reaction against the use of audiovisual materials. They often feel that the use of such materials competes with their own presentation—in the classroom as can happen if they are improperly used.

In the last analysis, however, the best salesmen for the employment of audiovisual materials are the materials themselves. When properly and imaginatively conceived and effectively employed they quickly establish their own worth. Such has been the experience of this department over the past four years. We now have a well-articulated and growing program for the employment of audiovisual materials. Our instructors now use these as a matter of habit and their skill is integrating them into the courses improves with each passing year. The display and film programs are supplementary but they, too, contribute to the educational goals of the department by broadening and stimulating the cadet's mind.

Audiovisual materials no longer can be considered merely an aid to provide fringe benefits to the educational process. They are now an integral and vital part of this process. There are problems of money, organization and experience in establishing an effective audiovisual program, but the improvement in teaching and the student response reward the effort expended.

## JUST OFF THE BOARD FROM BESELER

## NEW BESELER POLARIZING SPINNER ADDS MOTION TO VU-GRAPH TRANSPARENCIES

Suddenly, as if by magic, wheels turn . . . liquids flow . . . gears mesh . . . objects move—these and hundreds of other dramatic "motion" effects are now possible with your overhead projector. It's done by simply adding the new Beseler Polarizing Spinner to your overhead projector and a special pressure sensitive "motion" material to your transparencies. The result—a science slide, for example, on electricity comes to life—as current appears to flow, generators turn and lights go on and off.

Available as an accessory for most Vu-Graph Projectors the new Beseler Polarizing Spinner features:

- Variable speed control (80 to 40 RPM) permits adjustment of rate of on-screen motion.
- Swivel action clamping ring, swings spinner in and out of position.
- Special edge drive makes unit extremely compact, only 8" x 9" x 4".
- Angular scale with 36 positions on 180° arc, positive positioning for fade-ins, fade-outs.

Your Beseler A-V Dealer will gladly arrange a free demonstration of this advanced Beseler product. For complete specifications write:

# FILMSTRIPS

by Irene F. Cypher

World War II had its Battle of the Bulge; filmstrip production seems to have had a battle of "How Much Is Enough and How Often?" The problem might even be called one of "Sets vs. Singles." Personally, we are inclined to take the side of Singles—at least to the extent of saying that we are opposed to a statement which purports to claim that there is a hard and fast rule to determine the exact number of frames to be included in any one filmstrip, or that there is another rule which gives the exact number of strips that constitute a set. Quality of content and of color or black and white is more important to us than frequency of appearance. Some subjects can be covered in the proverbial

twinkling of an eye; why, then, stretch them out into yards of rather boring pictures? Other subjects can be divided and redivided into small units with enough left over for several extra sets. Moreover some subjects fall into a sequential order that is adapted to serial type production.

We make a plea to both producers and users to maintain and insist upon a standard of filmstrip production that will assure material worth using to stimulate and hold pupil interest. If this means single strips, all right; if it means sets, then still all right. There is nothing against variety in technique of presentation (if variety is the spice of life, it should be applicable to filmstrips).

**BIRDS OF THE CITY** (single strip, color; produced by National Film Board of Canada and available from Stanley Bowmar Co., 12 Cleveland St., Valhalla, N. Y.; \$5). There is just as much opportunity to study bird life in a city as there is in the country. Many birds are to be seen in the parks of cities and there can be many hours of enjoyment for the city child who learns to recognize them. Among the birds clearly pictured for us in this strip are the pigeon, starling, robin, woodpecker, crow, blue jay and gull. The sketches are true to color and show in detail the features to look for in identifying each bird. The filmstrip is good for classroom nature study work and is excellent preparation for a nature trip or bird walk or camping trip.

**BOBBY VISITS THE FARM** (single strip, color with manual; produced by California State Polytechnic College, El Corral Book Store, San Luis Obispo, California; \$5 for strip and one manual; extra manuals 75 cents each). This strip is the cooperative production of a college education and audiovisual department, and we think it is a good example of what these groups can do. The story is simple: a boy goes to visit a farm; he sees farm animals and the work carried out on a farm; he glimpses something of the life of a farm family and what they do in the course of a day's activities.

The pictures are clear, and they give us close-ups which enable us to recognize the animals. The picture presented is what a boy would see if he actually went to this farm. The fact that there are no captions to interfere with looking makes it possible to do a lot of talking about the picture content, and this is why we like the strip. Our guess is that pupils will do a lot of talking when this strip is used, and they will do it because the picture material presents something of interest to talk about.

**READING MEANING INTO MAPS THROUGH THE CAMERA LENS** (six strips, color; produced by Curriculum Materials Center, 10031 Commerce, Tujunga, California; \$3.95 per strip). People today have more recourse to maps than ever before, and it is certainly important for them to know how to read maps. The presentation techniques are good in this series. Basically, the purpose is to train the reader to recognize the standard symbols used to indicate map features. The strip relates this to real life by including photographs which show

## PIXMOBILE PROJECTION TABLE

**KEEPS YOUR EQUIPMENT  
READY FOR USE**

Save time... save storage space. Prepare your visual presentation in advance on the portable **Pixmobile**, roll it in, show it, store your equipment on it. Sponge rubber top, large enough for both movie and slide projector. Has 4" wheels, equipped with brakes that hold on incline. Vibrationless. Several models and heights. **42" table only \$32.95.**

## OPTIVOX PORTABLE EASEL

**FOR BETTER CHART TALKS**

Make a better showing with the versatile **OPTIVOX**, suitable for either floor or table. Steel working board, finished in "rite-on" green, is adaptable for chalk, charts, or magnets. Aluminum legs fold into compact unit. **Only \$44.95** Carrying case, lamps optional.

Write for Literature and Name of Dealer. Some Dealer Territories Open. Write...

**THE ADVANCE FURNACE CO.**  
2310 EAST DOUGLAS WICHITA, KANSAS

what the geographic feature actually looks like. This helps us to realize that the map symbols are really an alphabet which helps us read map information.

Material of this type is good for introductory map and globe study and it also has meaning for units of work where it is important to be able to look at maps and get an over-all idea of what geography means to history and world affairs.

**THE REVOLUTION OF EXPECTATIONS** (single strip, color and black and white, with 33 1/3 rpm record; produced by Life Filmstrips and available from Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$7.50 strip and record). Any study of world development, must of necessity include a consideration of what in each generation led men to seek out new places, still going on. An understanding of what is involved gives us a clue to the reasons why men go to war, why they struggle to produce machines and goods.

The strip is essentially suited to units in world history, economics and social science. Again this is an instance of non-captioned film strip (with comment and explanation on the record); this allows considerable latitude in the technique for presenting the material to any group and means that discussion can be carried out in terms of group background, level of work and language ability.

*United Nations Material—International Court of Justice, and The U. N. and the Refugees* (2 strips, black and white; produced by United Nations and available from Stanbow Productions, Valhalla, N. Y.; \$3 each). Much criticism of the way the United Nations operates stems from a lack of appreciation of how international matters are carried out. The first strip listed here gives us an idea of how the international court deals with matters involving people of different nationalities and affiliations. The second strip show us how important it is for refugees driven from their homelands to make new contacts and to become established in new homes. Neither of these strips is fabricated in a producer's outline; the facts are taken from real life and the story (if it can actually be called "story") is documentary and true to conditions existing today. There are captions to guide the viewer, but in many instances the pictures speak for themselves, and it would be good to invite student comment over and above what is suggested by the caption.

*Even in classrooms sunshine bright...*

## AO's NEW OVERHEAD DELINEASCOPE

*gives the clearest image you've ever seen!*

This revolutionary new overhead projector, by American Optical Company, was developed around a powerful 1000 watt light source to give you the brightest... biggest projected screen image you've ever seen. Even the extreme corners are sharp and clear because a specially designed Fresnel lens affords perfectly balanced illumination to every square inch of screen area.

This precision teaching instrument will project all the line, form and color of a 10" x 10" transparency up to a huge 177 sq. ft. screen image... in crisp, accurate detail.

You'll enjoy using this instrument because you face your class at all times... observe every movement and expression of subject reception and understanding.

AO's Overhead Delineascope helps give your program an unlimited flexibility that is not possible with any other AV medium. You can emphasize or dramatize by adding to your prepared teaching material on-the-spot.

You'll want to see all the new, exclusive features that make this instrument a practical investment in creative teaching. Your AO Salesman or Audio-Visual Dealer will be happy to arrange a demonstration at your convenience.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## The Industrial Revolution In England

(Encyclopaedia Britannica Films, 115 Wilmette Avenue, Wilmette, Illinois) 25 minutes, 16mm, sd, black and white and color, 1960. \$135 and \$270. Teachers guide available.

### Description

*The Industrial Revolution in England* presents a succinct resume of perhaps the greatest of all modern revolutions, namely, the Industrial Revolution. Its background, origin, precursors, and most important, its impact on England's body politic, society, and conscience are depicted with broad, bold and deft strokes.

The first sequence, a prelude in a somewhat a la Williamsburg manner, delineates the atomistic society of

the domestic system of England of 200 years ago in which the agrarian life of small farms, little changed from the Middle Ages, afforded its people a life of primitive toil and a low standard of living. At this time, too, when each household possessed its spinning wheel and each village its looms, every master, carrying on with his own capital, tried to wrest his family's necessities from his three to fifteen acres and to meet his augmented needs by the sale of domestically produced woolen cloth. While it is indeed true the master often displayed a genuine paternalistic attitude toward the training and welfare of his apprentices and journeymen, they were, nevertheless, bound by reprehensible custom and parliamentary law halfway between serf and citizens and were, therefore, destined to live and die on the spot where they were born.

The second sequence, utilizing a melange of pithy animation, 19th century engravings, and live shots, presents the sociological and economic facets of this change from domestic production to the factory system. Pastoral and somnolent villages became bustling towns, and towns became squalor- and vice-ridden cities spawning misery and destitution on an unprecedented scale. This era can best be synthesized in the lives of three Englishmen whose inventions launched and spearheaded this economic upheaval.

James Hargreaves, in 1765, came up with the "spinning jenny," a hand operated machine capable of weaving 16 spindles at a time, thereby replacing 100 hand spinners. He was followed shortly by the Rev. Edward Cartwright who in 1785 set the stage for further improvement in weaving by his invention of the "power loom" operated by water power, thus weaving cloth automatically. Lastly, and most significantly, was James Watt who despite the apocryphal teakettle story did, in 1769, improve upon the earlier work of Thomas Newcomen and constructed an efficient steam engine capable of driving machinery.

Thus it was that by 1781 the "age of steam" had ushered in a cheap source of power which, coupled with

improved methods of producing iron and steel, made the Industrial Revolution a *fait accompli*. Moreover, this inexorable movement left in its wake widespread unemployment and bitter opposition to the tyranny of the machine and the factory system.

However, by the 19th century, England had become the workshop of the world and supreme in world trade. All of this brought prosperity—prosperity, that is, if you were on top and well to do, because the whole structure was supported by the great masses who lived and toiled 12 to 14 hours a day under unspeakable conditions. In a very real sense the worker's life began with the employer and ended with the machine. Thus this new wealth and world preeminence rested upon the work of women and children in mines and mills who grubbed out an existence amid poignant human misery.

Why did not the warning of Mathew Arnold that England would undergo a "political bloodbath of revolution" not unlike that of France fail to materialize? The answers are two. First, the great reforms passed by Parliament from the middle 19th century onward: the Mines Act of 1842 forbidding women and children under ten to work in the mines; the Ten Hours Act of 1847, limiting the work day; the Acts of 1875 which gave trade unions full and legal protection. Second, the increased productivity as contrasted to the former low output of the manual system with its high prices and first class craftsmanship for those who could afford it. However, the machine increased production by the division of labor—shoes being made in 20 minutes rather than 18 hours by the old hand methods—thereby giving rise to such salutary benefits as higher wages, lower costs, and shorter hours. Indeed, it was these evolutionary rather than revolutionary changes which averted a bloodbath and made possible an increased standard of living for the English people. At the same time they made England an exporter of industrialism itself to the world, thus ushering in our modern technological and industrial civilization.

## Appraisal

This film is eminently suited for junior high use and, depending upon level of background and sophistication, for senior high. Certainly it lends itself to inexhaustible discussion which surely must accompany its use. However this capsule treatment of the Industrial Revolution would have been enhanced had the producers seen fit to plumb deeper the still unresolved social dislocations of this historical "Juggernaut," but perhaps that is a subject for further treatment. Let us hope so.

—Robert B. Pettijohn

a nervous seal to appear on the ice, and finally how to trap the white fox whose fur they will trade. Indeed, the family's trip to the Hudson Bay post is a highlight of the summer, for here they can secure not only new parkas, guns and ammunition, but also metal cooking utensils, mirrors and even baby cribs. In the near-by town where the family has relatives they see oil drilling and communication installations, a modern school for Eskimo children, and an increasing number of opportunities for their men who like to work with machinery. So as Anakudluk leads his family back

to their hunting grounds he realizes anew that now there are few Eskimos who do not have some contact with the white man in the Arctic.

## Appraisal

An anthropologist member of the evaluation committee, acquainted with the work of the film's collaborator and himself familiar with the Arctic, identifies the Eskimos pictured here as those inhabiting Baffin Land, Southampton Island, and the mainland on the west coast of Hudson Bay. The film mentions no specific locale, but

## Eskimo Family

(*Encyclopaedia Britannica Films*, 1150 Wilmette Avenue, Wilmette, Illinois) 17 minutes, 16mm, sd, black and white and color, 1959. \$90 and \$180. Teachers guide available.

### Description

This film pictures an Eskimo family during its journey to and its life in a spring hunting and camp site, its summer visit to a trading post and a nearby town, and its brief contact with modern technology as represented by industrial and military installations in the Arctic.

After almost ten months of winter during which the treeless land and the sea are frozen together, Anakudluk readies his *krammotik* and his half-wolf Huskies to carry his wife, infant daughter, and son over high ridges and long level stretches of ice to dry ground. Never travelling in large groups because of food shortages, the Eskimos pause frequently to test the sea ice, rest the dogs, permit the children to play, and partake of raw seal meat, their main food.

Finally reaching the tundra with its *paunrain*, the Eskimo family joins with others in setting up canvas "igloos." Each day the boys are called from their ball games to feed the dogs who fight fiercely over the remnants of seal meat, and the women cut seal skin into strips for various uses. During the summer nights when the sun never sets, families gather to exchange stories and to pass the time by telling jokes on each other.

But Anakudluk is always concerned about the weather and its effect on *Netchek* the Seal and *Tiriginiak* the White Fox. Fitting himself and his son in doubly furlined parkas, he teaches the boy how to fish by harpoon and line, how to crouch silently behind the portable blind waiting for

35mm filmstrip camera with single frame advance mechanism. Reflex viewing and specially designed lens for slide film work.

CECO—trademark of Camera Equipment Company

all these Eastern Arctic Indians have basic similarities. Many in the Hudson Bay area are of mixed stock, but not so much as are the "Greenlanders," a name now preferred by Eskimos living on that island.

*Eskimo Family* is accurate in its description of food and clothing sources. Caribou, though still hunted in some parts of the Arctic, are not found in large enough numbers for Indians pictured here to hunt them, even for skins used in parkas. The film's short sequence on modern technology is not overdone; many Eskimos, besides those who live regularly in towns, abet their incomes by operating bulldozers during the summers. Other interesting evidences of change are the modern colored glasses worn by Anakudluk as he stalks the seal, refrigerators found in town homes, and the small but efficient oil stoves used for heating tea while en route from one camp site to another. Such items suggest some use of this film at upper secondary levels but its chief appeal is for middle grade social studies.

Some teachers may be disappointed in its paucity of "built-in" geographical information but others will use it as a springboard to or even as a case study in Arctic life. It provides opportunity to contrast sounds of words in the Eskimo and other languages and illustrates the meaning of several interesting terms descriptive of eastern Arctic culture.

Technically the film is well done. The beginning of the trip, with the heavily loaded sled pulled by dogs running in a fan-like formation and

pushed by all but the infant member of the family, is especially dramatic. Color is used to advantage in many spots, one of which is a close-up of Anakudluk's weather-beaten and careworn face as he watches the changing weather from his summer igloo. Certainly this film should help at several grade levels to suggest that stereotype of Eskimos, like those of so many other people we do not know, are badly out of date.

—Kenneth B. Thurston

## Telling Stories to Children

*(The University of Michigan, Audio-Visual Education Center, Frieze Building, 720 East Huron, Ann Arbor, Michigan) 25 min, 16mm, sound, color, no date. Price not available.*

### Description

The art of story telling is developed in *Telling Stories to Children* through demonstration and explanation of techniques. The urgency of small feet running to take their owner to the library story hour in the opening is significant of the magic of this ancient art for youngsters.

A young librarian joins the children as an engrossed listener to the old favorite "Three Billy Goats Gruff." She expresses to the Story Lady her desire to be an experienced teller of tales and is introduced to collections of folk and fairy tales and to the techniques of the story telling art. Her first attempt to entertain young listeners fails. A successful telling of "Master

My Master" follows more thorough preparation and a rehearsal of techniques with a young man who comes to entertain at the story hour with a folk tale and Irish harp.

A colorful mobile displays the children's attempts to capture memorable moments of the Scandinavian tale of the three goats and the troll. This mobile silently expresses the imaginative creativity which stories can foster in children and indicates an activity which may be developed in combination with story hour programs. Similarly the use of the Irish harp points up the valid integration of another of the art forms, such as music.

Close-ups of the children's faces as they sit entranced by a well-told story are as significant as the squirming disinterest displayed to the tale poorly related. The unposed glimpses of the children help to draw the viewer into the spell of "Once upon a time" which takes the young out of their narrow world and allows them momentary satisfaction of identification with persons in the world of make believe. Through the natural response of the children is shown, also, the rapport which exists between listener and the weaver of the magic spell, a rapport which breaks down all the barriers of age, sex, and place.

### Appraisal

This film is an especially helpful introduction to the study and practice of a too little used ancient art. The integration of other art forms with story telling helps to point up the fact that, at its best, this is indeed a practiced and studied art.

The abortive attempt at story telling by the young librarian and her eventual success at delighting the story hour group should give heart to any novice.

Words of the demonstration stories are sometimes lost on the sound track. This is probably due to the naturalness of the story hour situation and to the teller's concern with his audience rather than the filming. The loss of a few words is no serious fault since the film's objective is to teach technique and not entertain with a story. There might properly have been a relation of story to book since story telling is often an ideal introduction to books. Students would also have found it helpful to know the collections from which the tales were taken.

Persons concerned with the training of those who are to work with children—librarians, teachers, recreation workers, group leaders, etc.—should find this much needed film of considerable value.

—Margaret Sheviak

## The KEYSTONE Standard Overhead Projector

is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Transparencies, Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Hand-made Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful —

In the **Science Category** with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the **Mathematics Category** in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the **Modern Languages Category** in teaching French, Spanish, German and Russian with Tachistoscopic Units.

# AV in the Church Field

by William S. Hockman

## The 17th Workshop

During the latter part of August, close to 150 AV leaders in the church field met at the University of Colorado at Boulder for an executive conference on two large AV themes: Production and Utilization. While these two subjects formed the warp of all our considerations, the woof was laid down by a shuttle of large and small group discussions which asked three questions. They were: What is the fundamental implication of the art of communication for these two subjects? What is the present status of each of these processes? What is the future of both production and utilization?

As the conference progressed it was quite obvious that our heads were much clearer on the subject of production than on utilization. We do not need to seek far for the reason. In production many of them had some experience; in utilization most had but little. Thus in 'utilization' we were fuzzy, bifocal, and often nonfocusing.

No distinctions could be made between utilization—in the sense of relating an AV unit of experience to ongoing educational experience—and utilization techniques, the process of wringing the educational juice out of the stuff being used. Even those who spoke on the art of communication turned out to be rather poor communicators, chopping away with a dull axe and relying more on the heft of the stroke than on deftness.

One of the prime considerations was: what are the denominations to produce for themselves and what will they ask the 'independent' producers to produce for them or turn out for the church market?

At the end of the conference the status quo on production was considered reasonably acceptable, with curriculum-integrated productions likely to be undertaken by the denominations. The independent producers would continue to produce 'program' materials both for the denominations, upon request, and also for themselves. This seemed to me the trend, although the official findings qualify this somewhat.

Utilization is the crucial point. In volume it has not kept pace with production, nor with the quality of the

great bulk of materials produced. Some of us remember when the cry at the workshops was, "Give us quality materials and we will use them." Remembered, too, are the days when the wail was, "There is so little to choose from; we will start using AV materials when they are plentiful."

Now, when quality is high and materials are abundant, total usage is little above five or ten years ago. There isn't space here to detail the reasons for this, but this much can be said: the topsoil of AV motivation and AV know-how in the average church is as thin as it was a decade ago and possibly thinner. How can a decent crop of audiovisual usage be grown on an inch of AV motivation and understanding?

More than Production, Utilization took the measure of the Boulder conferees. With scanty experience in this area, and with the handicap of the delightful biases of preachers, they tended to flounder in a sea of words.

On Training there was some rather

**LUXOUT**  
**DRAPERIES**  
... offer your **BEST** choice of effective light control

(Photo illustrates "NASSAU" exclusive print on LuXout DIM-OUT draperies.)

**BETTER BECAUSE LUXOUT** Draperies offer **COMPLETE** effective light control:

LUXOUT TRANSLUCENT draperies eliminate glare in offices, lounges, corridors and where audio-visual instruction is not given.

LUXOUT DIM-OUT draperies diffuse sunlight and darken rooms for projected pictures.

LUXOUT BLACK-OUT (opaque) draperies give absolute darkness when preferred for science rooms, auditoriums, or all-purpose rooms.

incisive thinking. If this was by accident, let us be thankful; if by design, let us be appreciative. As this training task was distributed among the various agencies which touch local church and educational personnel, there was considerable awareness of educational realities as well as ecclesiastical amenities. It is possible that the most realistic recommendations of the 'consultation' will turn out to be in this area. But let us not be kidded. Making recommendations to top level denominational executives is not to be equated with getting the job of training done at either the national, state, council, neighborhood or local church level. Both talk and momeo paper is cheap. It's time to perform; cut bait or go fishing!

One thing was obvious from the very beginning: more and more of those who work at the tasks of the church at all levels know less and less AV-wise. We have just about gone to seed. We have been content, as it were, to talk to each other, if not to ourselves. This AV movement within the church has gotten off the ground, away from the realities. We are one of those Nevada rain-clouds. There is a lot of water up there and some of it is

falling. But it never hits the parched earth, being reabsorbed into the atmosphere.

There is some promising new leadership coming along. They are competent in many ways, show a bias of urgency, are allergic to denominational fence-building and ecclesiastical fence-sitting. They want progress, for the Kingdom tarries. Weary of talk, they want some action. May their tribe increase!

The Consultation slipped its clutch on the so-called depth analysis of several important films. It seemed painfully obvious to many that the analysts had a superficial grasp of the meaning of 'depth analysis' and a scanty acquaintance with non-theatrical religious films. On the second go at it the floundering was not quite so pathetic.

On Sunday night the Consultation spun its wheels when we were obliged to view some very inconsequential films from overseas. A screening committee, as of old, could have spared us this waste of time. And waste it was, for in the library of the Consultation were dozens of fine films unseen and unknown by most of those in attendance. And right here let me say that the library and previewing operation was the most efficient of the Consultation. The scope of new materials, in both filmstrips and films, was most impressive. Many of those in attendance used every spare moment to increase their familiarity with the 67 films, 57 filmstrips and 11 recordings on hand. For the most part, only important new material came before us at the optional late-evening previews.

By and large the Consultation was a success. It was refreshing to see it turn down a proposal to omit such a 'workshop' (at Green Lake, Wisconsin) in 1961 in the interest of a small convocation of top denominational brass. This would raise that rain-cloud even higher above the parched earth. They wanted a 'Green Lake' in 1961, and suggested that a segment of it could then plan for the 1962 top executive AV meeting.

All who are interested in going beyond these comments and impressions are encouraged to secure the Boulder Consultation Findings from CAVBE, 475 Riverside Dr., New York 27, N. Y.

### This and That From Boulder

- In the 'let's dream' session, five of the ten 'dreamers' wished devoutly for 'truly integrated' materials, meaning that certain units of the curriculum continuum should appear in AV format. Pretty good dreaming, I'd say!

- Expert: "Though often wrong, he is one who is never in doubt." Another definition: "He doesn't know any more than you do but has it better organized—and uses slides." And this: "Ordinary man and his ideas a considerable distance from home."

- The food and the fellowship were tops at Boulder. By the way, just who has more fun, or a better right to it, than people who take the religious view of life? Within minutes everyone was acquainted; within hours we were all friends. What a goodly fellowship AV people are!

- When it comes to teachers, according to Bob de Kieffer, some are "unconscious inefficient," some "conscious inefficient," others "conscious efficient," and only a few are "unconscious efficient."

- For over-all technical excellence, honors go to the two motion pictures *Windows of the Soul* (Moody Institute of Science) and *From Generation to Generation* (McGraw-Hill). Runner-up: *One Love: Conflicting Faiths* (Methodist Radio and TV Committee).

- Sad reflection: Early-birds around the coffee urn just stand there and gab, never thinking to move out of the way so others can get up to the source of supply rather than stand afar with their mouths watering.

### Coming Up Here

In November we will review a number of important new films and filmstrips and evaluate them critically in terms of quality and utility.

This fall we will try to indicate some 'frontier' uses in the church for 'captured' and created audio materials which are available to alert church leaders here and abroad.

We also invite a 1000-word article on two subjects: "Steps A Beginning User of Audiovisual Aids Can Take;" and "How A Local Church Can Get Started in The Use of Audiovisual Aids." The past tense is acceptable, of course, if you have something to report on either of these subjects. (Yes; I'd settle for a little more or a little less than that thousand words!)

We hope to get an article on how to set a unit of learning into the experience continuum of a church school class, and stitch it fast so that it does not fall out. Or put another way, how to wring the educational juice out of an audiovisual aid.

## Election Addenda

It's still not too late to give depth and perspective to the current election campaign boiling up around all of us. Have your students given thought to what the recent post-convention session of Congress meant to local and national candidate-congressmen? It may be just the time, now, to introduce Howard Langer's interview of Senator Margaret Chase Smith (Folkways FC 7352) in which the senator from Maine discusses her work in the Senate, her views on particular issues and her relations with her constituents in Maine. Or you may prefer Mr. Langer's interview of Jim Farley (Folkways FC 7355) and hear the former postmaster general and campaigner extraordinary discuss American politics, political machines and a variety of other subjects pertinent to this campaign.

You may want to help students find the "off the record" side of politicians on *The Un-typical Politician* (Folkways FH 5501). This recording utilizes the voices of Al Smith, Franklin Delano Roosevelt, Dwight D. Eisenhower, Harry Truman, Adlai Stevenson, Thomas E. Dewey and many others. In this recording you will find some of the past conventions brought to new life through the sounds recorded on the scene; you will hear campaign songs as well as campaign humor and you will, of course, hear portions of campaign speeches.

We are told that the current campaign will be the subject of documentary records, and we hope that is true. For by way of review, once the heat of the day has passed, such a summary of the events of these days will be an invaluable teaching tool for both immediate use and reuse four years from now when a new crop of students, inexperienced in campaigns and political life, will be seeking a point of view from which to examine another campaign. *Campaign-1960* or whatever name it carries will enrich school audio collections and make it possible quickly and efficiently to give tomorrow's student the depth and perspective he seeks.

"We, the peoples . . .

of the United Nations, determined to save succeeding generations from the source of war . . . ." is the opening

phrase of the magnificent document which may mean to the world what our own Declaration of Independence and Constitution have meant to us. The Preamble to the Charter of the United Nations summarizes in comparatively few words mankind's hopes, goals and ideals.

And this is the subject of a new documentary recording offered by Enrichment Teaching Materials. Their *Preamble to the United Nations Charter* (EAD 6B) is a summary of the events which led up to the presentation of this document to the world. The concise history must, of course, begin with the end of peace in 1939 and involvement of the world in armed conflict in the years which followed. The recording includes discussion of the high level conferences involving national leaders which preceded the end of World War II and the international conference in San Francisco which organized itself to produce the document.

The closing of the recording includes a complete reading of the Preamble to the United Nations charter and offers the teacher a dramatic device by which to introduce this statement of man's aspirations to students.

This recording has built-in instructional advantages for upper elementary and junior high school students. These are, all of them, children whose knowledge of the horrors of war can

come only from reading, television and motion pictures. These children cannot grasp the high motives of international organization unless these are presented simply, and directly. The alert teacher can use such a recording as a motivation for role-playing in a classroom re-enactment of the San Francisco meeting of 1945. The recording can be used, too, to present simply and directly the document basic to the record, or it can be used to summarize already completed in-

— A WORLD OF SOUND ON FILE —

Weston Woods Studios has re-packaged their "Picture Book Parade" series in sound filmstrip sets: four individual filmstrips, their text booklets, and a 33 $\frac{1}{3}$  long-play record telling the stories.

struction or to review that which has been studied beforehand. School libraries which make a practice of lending recordings as they lend books will find this is a popular and valuable addition to the record collection and suited to the needs of students.

Appropriately, the "flip" side of this recording looks backward into an earlier generation which attempted world organization for the peaceful pursuit of mankind's objectives. *Woodrow Wilson's Fourteen Points* (Enrichment Teaching Materials EAD 6A) takes the student back into 1918 and mirrors the feeling of the people and the time through the then popular songs. The recording summarizes the atmosphere in which Woodrow Wilson went before the Congress in January, 1918, and delivered his statement viewing fundamental requirements for a lasting peace. These fourteen points went with him to Paris and one of

them, the organization of a League of Nations, became a reality without full American support.

The recording is designed to supply for that period what the recording about the UN supplies for this period, and the listening student cannot help but develop an attitude of understanding and appreciation for the wisdom of Woodrow Wilson, his humility and his desire to serve the world by creating the foundations for a just and lasting peace. As in the UN recording, this too summarizes at the conclusion by a simple restatement of the basic points which Wilson enunciated.

And, as its companion recording, this is suitable to upper elementary and junior high school students studying this period of man's development and may be used for motivation, for the presentation of fundamental information or for summary and follow-up.

## Politics-Perpetually

Playwrights and authors have always been fascinated by government and politics and have recorded the history of many real and legendary characters in political drama. William Shakespeare is no exception. Early in the 17th century he set down the story of *King Lear* (Spoken Word SW-A9) who decided to abdicate his throne in favor of his daughters in proportion to their love for him. The youngest daughter, Cordelia, expresses her love in terms of the proper affection a daughter should show her father, and is disinherited. But her two older sisters divide the kingdom.

Selfishness, greed and jealousy bring about the downfall of the dynasty which Lear sought to establish. The elder sister, Goneril, poisons her younger sister and later puts an end to her own life. Cordelia, who has come from France to aid her father is captured and dies in jail, and Lear also perishes.

A complete, full length recording of the play is presented. The production, a performance by the Dublin Gate Theatre, is read from the Oxford edition of the play. Anew McMaster directed the fine performance and leading roles are played by Mr. McMaster (*Lear*), Eve Watkinson (*Goneril*), Nancy Manningham (*Regan*) and Jillian Gotts (*Cordelia*).

Classes studying this play will find that the action and the language have new clarity as they hear the play and follow it in their texts simultaneously. Certainly this can be used for a variety of instructional activities far beyond the classroom.

Public libraries can plan the presentation on a single performance or a serial basis. So, too, can college libraries wanting to offer extra experiences beyond the classroom for interested students and faculty members.

And in any discussion of politics and the theatre the play *Julius Caesar* (Spoken Word SW-A15) cannot be overlooked. This is an equally highly considered performance of the Shakespeare play, performed by the Dublin Gate Theatre. This recording, as is true of the *King Lear* just mentioned, is complete and unabridged and is taken from the Oxford edition.

An additional use of this recording is suggested. Not infrequently this is the first Shakespeare play (in *is* or *Macbeth*) which is introduced in classrooms for close study. And this introduction may be in the senior high school or in the latter portion of the junior high school. Certainly in this instance, close listening for com-

prehension is an essential to appreciation, and thus is *Julius Caesar* suggested for introduction at this level of instruction.

Close study of the audience Shakespeare approached and charmed gives many parallels with our younger students. Shakespeare wrote to be heard, not read. His effort was to please a comparatively socially inexperienced audience which understood what was said and seen but may not have high literary accomplishments from a reading standpoint. So be it! We, then, as teachers have an obligation to introduce this man's work in the natural environment of sound so that appreciations can be developed. With the present availability of many fine, full-length productions of Shakespeare's plays there can be no reason for ignoring the presentation of this dramatic work in sound for the appreciation and understanding of modern students.

Sometimes politics seems timeless—and this indeed is true of the story *Robin Hood* (Libraphone J 1620). This is a complete reading by Ian

Martin of the story so happily adopted by all children. They will meet Robin Hood and all his outlawed companions in Sherwood Forest. Little John, Friar Tuck, Allan-a-Dale, Will Scarlet and Will Stutley are all there to fascinate young people in this excellent straight reading. Obvious application is for the upper elementary grades.

Libraphone Records are intended, primarily, for those who are sightless or have limited vision. These are recorded at the slow speed of 16.67 revolutions per minute and approximately one full hour of sound is included on one side of a single record.

Of course the use of such records is not limited to handicapped children or adults. This recording may be heard in class—chapter by chapter, as an introduction to this type of book. Or the teacher may elect to have the superior reading of Ian Martin present the first few chapters and then rely on the imagination and interest of the children to lead to additional reading. The uses are many and varied and the application most probably will be in the fifth and sixth grades.

## Something New at NAVA

Doing the round of the exhibits at the National Audio Visual Convention last August we were impressed by the tremendous project undertaken by the Academic Recording Institute of 3060 Locke Lane, Houston 19, Texas. Mr. and Mrs. Mack Reed have already produced 50 recordings in five subjects. The overall titles are Taste and Genius in the Arts, *The Philosophical Perspective, The Nature of Human Nature, Morison by Land and by Sea* and *Politics: The Folklore of Government*. The voices exploring these subjects in some depth are John Mason Brown, Charles Frankel, Ashley Montagu, Samuel Eliot Morison and C. Northcote Parkinson.

The recording companies mentioned in this summary of recent release include Folkways of 117 West 46th Street, New York 36; Enrichment Teaching Materials of 246 Fifth Avenue, New York 1; Spoken Word, 10 East 39th Street, New York 16; and Libraphone of Box 215, Long Branch, New Jersey.

# NEW BONUS RECORDED TAPE

Some of our greatest popular songs—"Full Moon and Empty Arms," "Till the End of Time," "Stranger in Paradise"—took their melodies from the classics. Eight of these lovely themes—in their original classical setting—are the basis for "Classics that Made the Hit Parade."

This unusual program, professionally recorded in sparkling full fidelity on Audiotape, is available RIGHT NOW from Audiotape dealers everywhere. (And only from Audiotape dealers.) Don't pass up this unique opportunity to get a fine recorded tape at a bargain price.

**audiotape**

Manufactured by AUDIO DEVICES, INC.  
444 Madison Ave., New York 22, New York  
Offices in Hollywood & Chicago

### DETAILS OF THE PROGRAM

Borodin	Polovtsian Dances from Prince Igor (Stranger in Paradise)
Tchaikovsky	Symphony No. 5 in E (Moon Love)
Waldteufel	Espana Waltz (Hot Diggity)
Chopin	Polonaise No. 6, in Ab Major (Till the End of Time)
Tchaikovsky	Symphony No. 6 in B (The Story of a Starry Night)
Rachmaninoff	Piano Concerto No. 2 in C Minor (Full Moon and Empty Arms)
Chopin	Fantasia Impromptu in C# Minor (I'm Always Chasing Rainbows)
Tchaikovsky	Romeo and Juliet Dverture (Our Love)

### DETAILS OF THE OFFER

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains one 7-inch reel of Audiotape (on 1½-mil acetate base) and the valuable "Classics that Made the Hit Parade" program (professionally re-

corded on Audiotape). For both items, you pay only the price of two reels of Audiotape, plus \$1. And you have your choice of the half-hour two-track stereo program or the 55-minute monaural or four-track, stereo versions—all at 7½ ips.

See your Audiotape dealer now!

For more information circle No. 111 on return postal card.

**Uher Universal Dictating Machine**, voice operated (stops and starts with voice sounds); pick-up range 50 feet; automatic stop; keyboard control; \$299.95. KIMBERLY.

For more information circle No. 112 on return postal card.

### LANGUAGE LAB

**Console and Student Stations** designed for incorporation of visuals as well as up to 10 simultaneous isolated programs, direct individual audio contact, general call, mass duplication of tapes,

Bernco Lang-lab station

individual student monitoring, program origination from any student station to provide "recitation" situation, aural adjustment to fit individual hearing differences established by audiometer tests. 16mm film and soundslide presentations available free. BERNCO.

For more information circle No. 113 on return postal card.

**Edwards Language Laboratory** offers a two or four channel system, with two tape recorders housed in handy desk drawers at teacher's control console; individual student booths with their own tape recorders equipped with non-erasable master track channel. EDWARDS

For more information circle No. 111 on return postal card.

**ETV Console** controls up to six cameras, controls designed for student operation, three monitors. Mobile control console model also available. DAGE.

For more information circle No. 115 on return postal card.

**Magneticon Tape Magazine** simplified operation for student and teacher. Eliminates threading errors. Also new indestructible magnetic recording discs, unlimited re-use. MRI.

For more information circle No. 116 on return postal card.

**Language Lab** Uncomplicated by special furniture installation is reported in a set-up reportedly costing less than \$50 per student. Uses school's present tape recorder, PA or record player, plus power supply, control center and individual headphones and microphones. Student hears own voice, teacher can listen in. Junction boxes available as accessories to meet special power situation. SWITCHCRAFT.

For more information circle No. 117 on return postal card.

**MISCELLANEOUS EQUIP.**

**Chart Rack**, wall-mounted, swivelled, 180 degree swing, with mounting bracket of 40 lb capacity, \$8.50. BILLERETT

For more information circle No. 118 on return postal card.

**8mm Magnetic Stripper** in a "commercial" size for photo-finishers and educational film production centers, 36" x45"x26". Operates on same principle as 35mm professional production model. REEVES

For more information circle No. 119 on return postal card.

**"Fish-Hook" Tape and Bulletin Board.** Uniquely woven nylon fabric, over aluminum board, holds solid objects as well as flat materials by means of adhesive-backed tape that interlocks with the fabric to hold weight up to 10 lb. per square inch. MAYER.

For more information circle No. 120 on return postal card.

Switchcraft Language Lab

**Film Inspection Table** with automatically braked reels, completely enclosed reels, automated splicer giving, arc-shaped splice on .0015 inch cut. KIDDE.

For more information circle No. 121 on return postal card.

**"Min-Rapid 16"** portable motion picture developing machine operates at 6 fpm, delivers 100 ft ready to screen in less than 20 minutes. Requires no plumbing; only a 110 volt AC outlet. One chemical loading processes up to 400 ft of film. 13"x13"x27"; wt empty 65 lb. FAIRCHILD

For more information circle No. 122 on return postal card.

**Multiple Choice Teaching Aid** consists of an illustrated workbook that fits

Illustrated Workbook

between two rows of buttons, which student presses for a 1 in 3 correct answer. SMITH-HARRISON.

**Linguaphone**  
**NEW ELECTRONIC LANGUAGE-TEACHING TAPES**

Linguaphone School Tapes are available in The 4 Most Popular Languages: Western Hemisphere Spanish, French, German, and Russian.

The Linguaphone Language Program is qualified under the provisions of the National Defense Education Act.

In your own school, inspect this latest development in audio-visual language training...outgrowth of Linguaphone's experience in over 18,000 schools, colleges, and universities.

This new conversational language program makes language-learning more enjoyable, language-teaching much easier.

Linguaphone's unique combination of native linguists and modern electronic devices makes possible tape and disc recordings of such quality that every nuance of pronunciation, diction, phraseology, and accent is clearly understandable. The *synchronized* Tapes and Discs, Manuals, and up-to-date Workbooks (by Dr. Theodore Huebener) comprise the ONLY COMPLETE language study program available today.

Such an achievement must be seen and heard. That is why we invite you to evaluate this new Linguaphone School-Tape Program in your own classroom. Mail coupon today for your free demonstration with no obligation.

**NEW**  
 projection screen now enables you to view pictures in semi-darkened rooms

It is true that you can project better pictures in darkened rooms—but there are many times when room darkening is inconvenient, difficult and costly. Now, with the new Radiant exclusive "truly lenticular" screen, which controls both horizontal and vertical light reflection, you can project slides and movies effectively in normally or partially lighted rooms where no unusual lighting conditions prevail. For schools—this enables viewers to take notes during showings, minimizes inattention and misbehavior, and permits simultaneous use of collateral material.

Send for illustrated Booklet which gives the complete explanation of this new truly lenticular screen, also catalog giving specifications and prices of Radiant's complete line of lenticular and glass-beaded screens of every type for every purpose.

MRS. MARY LOU PLUGGE, *Chairman of the DEPARTMENT OF SPEECH AND DRAMATIC ARTS AT ADELPHI COLLEGE in New York, finds her NORELCO 'Continental' tape recorder an essential tool in speech instruction. Here MRS. PLUGGE illustrates, to her lovely student CAROL SAMISCH, the proper way to produce a sound. MISS SAMISCH, in turn, repeats the sound into the tape recorder so that she may listen to an accurate reproduction of her own voice and compare it. Says MRS. PLUGGE, "My NORELCO tape recorder is valuable to me for a number of reasons. There is an impressive tone quality in its reproduction of sound. Concomitant with this is the aid of the mechanical pause button which allows me to stop to analyze progress without turning off the machine. The control over recording is such that the possibility of accidental erasure is completely eliminated."* The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S10, 230 Duffy Avenue, Hicksville, Long Island, New York.

*New! For In-Service Teacher  
Training*

### Teaching Science in the Elementary School

The first four of a series of filmstrips in color with recordings and helpful guides, depicting actual science experiences in elementary schools and alerting teachers to many new opportunities. By Helen Heffernan, Chief of the Bureau of Elementary Education, State of Calif., and Lovelle Downing, Curriculum Director, Modesto City Schools.

**Kindergarten: The World is So Full of a Number of Things**

Stimulates an awareness of the richness of science experiences to be found within the environment of five year olds.

**Primary: All About Milk**

Experiencing science through several first hand study trips with classroom follow-ups and experimentation.

**Primary: Science in Our Daily Bread**

A creative teacher of seven and eight year olds demonstrates the scientific teaching method as well as the use of the wide variety of science content.

**Intermediate: Science in the Magic Story of Water**

Suggestions on how science learnings from a planned environment can be deepened by using books, audio-visuals, maps and other media. Sequences cover major water problems.

# HE CAN'T PULL A LEVOLOR VENETIAN BLIND DOWN

Because, not only are LEVOLOR installation brackets made of heavier, stronger metal, but LEVOLOR installation brackets have a two-way safety catch. Even when not completely locked, the blind cannot come down.

Information that insures the best installation possible is a service all LEVOLOR representatives will give you. They will submit a prospectus covering every detail of your Venetian Blind installation—help with the specifications and make a final inspection *after* the blinds are installed. It is a service that guarantees good specifications and good Venetian Blinds.

## The Authors

*Charles A. Huff* is a teacher at Northampton Elementary School in Cuyahoga Falls, Ohio. An artist was given a quick look at a sketch Mr. Huff made of his 'wall' and then was given the manuscript to read. To us, at least, the idea of this 'wall' is a fresh one.

*Channon H. Krupsky* teaches seventh grade at the Askev School in Kansas City, Missouri. His story is another plank in the platform that almost all learning situations can be handled effectively by a resourceful teacher with AV materials at his disposal.

*James DeVirgilio* is professor of education at State Teachers College, Salisbury, Maryland. His refreshing little story developed, he said, out of his audiovisual materials class at the college.

*Robert Wiseman* is assistant director of the Audiovisual Center at Eastern Illinois University, Charleston. He had set up this langlab installation at a state audiovisual meeting last spring, and received many requests to write his story explaining the equipment.

**11:00 A. M.**  
**This movie is really sharp! Not a light leak anywhere.**

REASON: The windows in this room are light-controlled with Flexalum Audio-Visual Blinds. These blinds make any room theatre-dark anytime. Here's why: (1) more slats per height plus (2) patented notch in each slat that permits adjacent slats to touch, equals (3) no between-slat light leaks. (4) Light-trap channels eliminate around-the-edge light leaks.

**11:10 A. M.**  
**The slides look great. Just enough light to take notes.**

REASON: You get just the degree of light control you need with Flexalum Audio-Visual Blinds. No other form of blackout covering allows you this flexibility. And Flexalum Audio-Visual Blinds will always stop and stay just where you want them. They're precision engineered to operate so flawlessly, they're guaranteed in writing for five year years.

**11:20 A. M.**  
**Back to groupwork. Full daylight, instantly—no glare.**

REASON: Nothing to take down, nothing to tug back. No wasted money for multiple coverings, no wasted classroom minutes. Flexalum Audio-Visual Blinds do the whole job — taking you from projection darkness to full light (or anything in between) with just a flick of a nylon cord. The plastic lined side channels eliminate all noisy flutter!

**Get full-range light control—at low cost—with *Flexalum*® Audio-Visual Blinds**  
Bridgeport Brass Co., Hunter Douglas Division, 30 Grand St., Bridgeport 2, Conn.

# EXTRAORDINARY ANNOUNCEMENT —

## PHOTOPLAY STUDIES

### Comes of Age—!

The NATIONAL COUNCIL OF TEACHERS OF ENGLISH, beginning with the academic year 1960-61, will publish a monthly magazine called

## MASS MEDIA STUDIES

This will include *Photoplay Studies*, as well as *Drama Studies*, *Television Studies*, *Magazine Studies*, *Newspaper Studies*, and other mass media studies from time to time.

The NCTE, now planning a 50th Golden Anniversary convention, has 60,000 members. The organization has a new headquarters building at Champaign, Illinois.

The general editor of the new *Studies* is Dr. Joseph Mersand. He is a past president of the NCTE. Dr. Mersand is a leader in the movement to include in the teaching of English a critical appreciation of America's mass media. The aim of this movement is to build "natural censorship" by developing independent critical judgment.

The photoplay-appreciation movement started in 1934, when the NCTE published Dr. William Lewin's pioneer monograph on *Photoplay Appreciation In American High Schools*. The following year (1935) *Photoplay Studies* was launched by Lewin and the late Max J. Herzberg. It has appeared in the same format for 25 years.

For your subscription to the new *Mass Media Studies*, use the order blank below.

### NCTE MASS MEDIA STUDIES:

- Eight monthly issues devoted to motion picture guides, television guides, and drama guides.
- Special articles furnishing information on forthcoming films and television programs with special exercises for studying the mass media.
- Mailed to arrive the first of every month.

Single Subscriptions  
**\$2.00**

Class Subscriptions

## Schools Can Now Obtain Foreign Language Newsreels

Current newsreels in six foreign languages will be made available to school and college language departments each week during the school year, according to announcement by J. Stanley McIntosh, executive director, Teaching Film Custodians, Inc.

"TFC" is a non-profit educational service for schools, colleges and universities sponsored by the Motion Picture Association of America and the major motion picture companies. The language newsreels are made available through the cooperation of 20th Century-Fox Movietone News and are produced with their technical facilities.

Languages now offered are English, French, German, Italian, Russian and Spanish. Other languages will be added according to the demand.

## Kansas City Schools To Have Own TV Station

The Kansas City School District, whose educational telecasts have been carried by the city's three commercial stations for the past three years, soon will operate its own TV outlet, KCS-D-TV.

J. Glenn Travis, administrative assistant to the superintendent of schools

and head of the educational TV study, said the new station's educational telecasts will be available to all of the district's 68,000 students. Channel 19 will begin operating with 4½ hours of programming per day and will build to seven hours daily, according to the projected schedule.

The district has used television in its school system since 1957 when KCMO-TV made air time available to telecast fifth grade Geography of Asia. With television receivers borrowed from local distributors, the telecasts were piped to about half the 80 schools.

KCSD-TV studios will occupy the 11th floor of the new public library-school administration building in Kansas City. Receiving units will be installed in all elementary and secondary schools in the district.

Railroaders in New Delhi, India, study American railroad operations through use of a recently produced Illinois Central Railroad motion picture titled *Block Signal, Centralized Traffic Control and Interlocking Rules*. The motion picture is being loaned to the Indian Railroads under the auspices of The International Cooperation Administration, an American foreign assistance agency.

## EFLA Announces Three Meetings For November

The Educational Film Library Association has announced three regional meetings to be attended by its national membership during November. Emily S. Jones, administrative director of EFLA, reports that all three meetings will feature screenings of new films of unusual interest, as well as demonstrations, conferences and discussion sessions.

The Eastern regional meeting will be held November 3-4 at the Carnegie International Center in New York City under the joint sponsorship of EFLA and the New York Film Council. The Central regional meeting is scheduled for November 10-12 at the Pick-Fort Shelby Hotel in Detroit. Presiding chairman will be James Limbacher of the Dearborn Public Library. The Western regional meeting will be in session November 18-19 in Tucson on the campus of the University of Arizona, under the chairmanship of Mrs. Venice M. Lindsay, of the A-V Center of the University.

## U. of Wisconsin Opens New Long Distance TV Course

A new long distance closed circuit TV course in electrical engineering is underway at the studios of WHA-TV on the University of Wisconsin campus. Three classes of students meeting simultaneously, two in Milwaukee and one in Madison, are enrolled in the pioneering TV course.

The UW has experimented with closed circuit TV classes previously, but only between buildings on the Madison campus.

The students in the three widely separated classes will see and hear Prof. Wayne Swift, of the UW electrical engineering department, lecture in the course. Through the use of "audio

### The KEYSTONE Standard Overhead Projector is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Transparencies, Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Hand-made Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful—

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

Write for Further Information or a Demonstration by our Local Representative.

# TEACHERS ARE LOYAL TO CURRICULUM CORRELATED CORONET FILMS

Why are Coronet Films  
invariably the choice  
when teachers are  
concerned with film selection?

The skilled teacher—thoroughly familiar with the curriculum and highly sensitive to classroom needs—is constantly searching for supplementary materials to enrich each unit of instruction.

The main requirement is that these materials meet the needs of the modern curriculum and that they not only complement, but also extend and clarify the textbook... the basic teaching tool in the classroom. The teacher is quick to recognize that Coronet films do exactly this... that they reflect the curriculum precisely as she knows it from her day-to-day classroom experience.

Why do Coronet films have this instantly recognizable quality?... because for twenty years their production has been governed by a single aim: to make only those films which truly correlate with the course of study and the textbooks which are used most widely.

*To become better acquainted with Coronet films for classroom use, simply select preview prints of your choice from the current catalogue of nearly 1,000 Coronet films. For detailed information on the extent to which Coronet films correlate with the curriculum, write for a handsome, new chart which outlines the exact relationship between more than 100 Coronet science films and 30 leading textbooks used widely in grades 4, 5, and 6. Ask for "Intermediate Science Chart."*

## CORONET FILMS

DEPT. ES-110 CORONET BUILDING . CHICAGO 1, ILLINOIS

talk-back" on the closed TV circuit, the students will have the opportunity to question their professor and hear their answers immediately.

Of the three classes, the one on the UW's Madison campus will be only a few hundred feet from the WHA-TV studios, in the University's Education Building. The two classes in Milwaukee will be 80 miles away, one on the UW-M downtown campus and the other in the A-C Sparkplug plant at Oak Creek outside of Milwaukee.

**Illinois School For Blind Using Recordings of Texts**

Blind people are now using recordings of high school and college texts.

The recordings, called "talking textbooks," are being used for the third successive year by the Hadley School for the Blind, a correspondence institution for the blind located in Winnetka, Ill. According to Donald W. Hathaway, the school's executive director, the recorded texts help the student learn faster, better, and with more rapport with the instructor.

"Currently 150 blind students out of the total enrollment of 1,500 are using the recordings," Hathaway said. "Within ten years, we expect half our enrollment to be using records instead

*(Continued on page 578)*

An Argus direct wire television camera, donated by Photo & Sound Company, San Francisco, to the S. S. Hope, will be used to train medical students overseas. Dr. Paul E. Spangler, senior medical officer aboard the mercy ship shows off the equipment to nurses Alice Campion, Waterbury, Conn., Theresa Campbell, San Francisco; and Florence Mudge, Escondido, Calif. The closed circuit TV equipment included three viewers and necessary cable and wiring.

# ALL NEW FROM AMPEX

*In sound quality, in operating principle and in features, this is the compact professional recorder that will set the standards for all others. New in every detail and Ampex throughout, the PR-10 is all you expect of the name. It is a worthy companion of the big Ampex recorders that make the master tapes of nearly all the recorded performances sold in the world today. To a heritage of excellence, the PR-10 adds the completely new electrodynamic frictionless tape handling system that makes possible studio-quality performance in a compact machine. Your dealer has it. See it operate soon.*

**FEATURES AND ESSENTIAL DATA** PR-10-2 stereo/monophonic model records and plays back stereo-  
phonic, monophonic, sound-on-sound, cue-track, selective track and mixed or unmixed two-microphone sound • PR-10-1  
monophonic available full track or half track • Pushbutton controls of professional relay-solenoid type • Full remote control  
provisions and accessory remote unit • New automatic 2-second threading accessory, optional • All new compact  
electronics • Professional monitoring includes A-B switches, VU meters, phone jacks and output circuits • Separate erase,  
record and play heads • 4-track stereo playback optional on open fourth head position • Two speeds with options: 15 and  
7½ ips or 7½ and 3¾ ips • Hysteresis synchronous motor • Electrodynamic tape handling for lowest flutter ever in a  
portable/compact recorder • Plug-in modules for flexibility of equalization and input characteristics • Portable or rack  
mount • Dimensions for both models: 19" w by 14" h permitting easy replacement of many older rack recorders.

of Braille texts." He pointed out that of the 370,000 blind persons in the U.S., only 12,000 read Braille. Hence recordings can reach many more blind persons than Braille can.

### "Continental Classroom" To Offer Math In 1960-61

Mathematics will be offered on "Continental Classroom" during 1960-61 over the NBC network. This will be sponsored by the Learning Resources Institute in cooperation with the Conference Board of the Mathematical Sciences and NBC. The course, entitled Contemporary Mathematics, will offer Modern Algebra during the first semester and Probability and Statistics during the second semester.

Professor John L. Kelley, head of the mathematics department of the University of California will teach the first semester and Professor Frederick Mosteller, chairman of the Department of Statistics of Harvard University, will offer the second semester. These courses will be broadcast Monday through Friday 6:30 to 7:00 a.m. for graduate students and Monday, Wednesday and Friday for undergrads.

### "Cinema 16" to Present Varied Film Offerings

Cinema 16, America's largest film society, will present 16 programs of new features, international prize winners and rarely seen classics during its forthcoming 14th season, opening October 23rd. The fare will include a festival of prizewinning films from France, two programs presented in cooperation with Unifrance, featuring more than 20 prizewinners not previously seen in the U.S., including *Simenon*, first documentary of the famed novelist, showing his unorthodox work habits.

Cinema 16's performances are presented at two of New York's well-known art theatres, the Beekman and the Murray Hill; and at the Fashion Industries Auditorium.

### New Math Teaching System To Undergo Test Program

One of the largest test programs ever conducted to evaluate a new educational system was described to 57 top educators from 35 states and Canada during a two-day conference August 26-27 at Hollins College, Roanoke, Va.

The session was convened to discuss a proposed new method for teaching mathematics. The unique system, based on a series of specially designed "programs," was explained to state math directors, education supervisors and teachers by officials of Encyclopaedia Britannica Films and Hollins College, which will administer the project jointly.

Dr. E. W. Rushton, superintendent of schools in Roanoke, said that the city's participation in the testing program, to be held in five U.S. cities beginning in September, grew out of a decision last year to relate high school instruction techniques to college teaching practices.

To expedite this pioneering effort, Dr. Rushton said, the school system enlisted the cooperation of the Roanoke school board, children selected for the special program and the teacher and principal of the school in which the 1960 test was conducted.

### Two AV Books Available

Educational Screen has a limited supply of two volumes, *Picture Values in Education*, and *Comparative Effectiveness of Some Visual Aids in Seventh Grade Instruction*, both by Joseph J. Weber. One or both are available upon written request at a cost of one dollar each to cover postage and handling.

## Good reasons for RCA projector popularity!

- "Life-Tested\*"—your assurance of projector quality!
- Easiest, fastest threading in the 16mm field!
- Whisper-quiet operation!
- Powerful 1200-watt lamp—throws 20% more light on screen!
- Built-in lubrication!
- Pressure guides are the "softest touch" in film handling!
- Nylon film pressure shoe—lasts 2 to 3 times longer!
- Superior sound reproduction!
- Longer operating life; minimum maintenance!

\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better, more reliable performance from RCA Projectors.

## Teaching Science in the Elementary School

New filmstrips in color with recordings and helpful guides for in-service teacher training. Actual science experiences in elementary schools alert teachers to many new opportunities. By Helen Heffernan, Chief of the Bureau of Elementary Education, State of California, and Lovelle Downing, Curriculum Director, Modesto City Schools.

### Kindergarten: The World is So Full of a Number of Things

Stimulates an awareness of the richness of science experiences to be found within the environment of five year olds.

### Primary: All About Milk

Experiencing science through several first hand study trips with classroom follow-ups and experimentation.

### Primary: Science in Our Dolly Breed

A creative teacher of seven and eight year olds demonstrates the scientific teaching method as well as the use of the wide variety of science content.

### Intermediate: Science in the Magic Story of Water

Suggestions on how science learnings from a planned environment can be deepened by using books, audio-visuals, maps and other media. Sequences cover major water problems.

Write now for descriptive brochure!

**Long FILMSLIDE SERVICE**  
7505 Fairmount Ave., El Cerrito 8, Calif

Another reason  
to go RCA!

# THREAD-EASY FILM PATH

## ...EASIEST TO THREAD, SIMPLEST TO OPERATE

Almost anybody can thread an RCA "Life-Tested"\* 16mm Projector in less than 30 seconds. Its exclusive Thread-Easy film path is the simplest and most direct in the 16mm field. Even amateurs can screen every show with professional-like ease.

RCA engineers continually search for new ways to make RCA projectors even longer-lasting and easier to operate. As new ideas are proved valuable, they become part of RCA Projector design.

For example, the latest "Life-Tested" Projectors incorporate a nylon film pressure shoe which is kinder to film, quieter operating and so durable that it probably will not require replacing during the normal lifetime of the projector. New, too, is a one-piece, precision tooled intermittent cam and gear which replaces a 3-part assembly. A new claw design accommodates new or old film with equal facility and reduces film handling noise to a hush. Like most changes, these are not readily visible, but are

contributing substantially to the smooth operation and dependable performance you expect from RCA Projectors. This is the important kind of design change, the kind that keeps RCA Projectors always ahead in 16mm.

Competitive comparisons have sold thousands of RCA Projectors. Make your own . . . you'll go RCA!

*Your RCA Audio-Visual Dealer has full details on RCA "Life-Tested" Projectors and other electronic aids to education. Look for his number under "Motion Picture Equipment and Supplies" in your Classified Directory. He will be glad to come to your school to give you a demonstration.*

# 400 Hear Experts, Attend Workshops At Fall Meeting Of Illinois AV Assn.

There was "something for everyone" at the fall meeting of the Illinois Audiovisual Association, held at the Aurora (East) High School, in Aurora Sept. 29-Oct. 1.

Schools were closed to permit all teachers to attend this specifically audiovisual education institute, and more than 300 Aurora teachers mingled with another hundred or more members of IAVA from all over the state.

The opening general assembly, chaired by Dr. Robert Campbell, director of instruction and curriculum of the Aurora schools, featured an all-out endorsement of modern teaching tools and methods in the opening address by Superintendent Norman S. Greene. He left no doubt about his high regard for the professional competencies of the audiovisual education specialist, on whom he counted, he said, for "sane and sound counsel" in advance-

ing the techniques and resources of teaching.

Three other addresses comprised the morning program. Dr. Maurice Mitchell, president of Encyclopaedia Bri-

tannica Films, spoke on "New Teaching Tools for the New World"; Alvin B. Roberts, AV director at Western Illinois University, gave a color-slide lecture on "Global Observations and

Dr. V. B. Kamath of Bombay, India, and teachers Benlah Bennett, W. Sherwood, Dorothy Everson, Blanche Benton.

Mr. E. Petersen, educational aids service, Aurora Public Schools, and "The Use of Instruments in Teaching Reading."

**"FIBERBILT" CASES**  
"THEY LAST INDEFINITELY"

Sold by All Leading Dealers

Impressions on Education"; and Dr. V. B. Lamath, University of Bombay, talked on "The Philippines, Japan and India."

During the mid-morning and luncheon intermissions and again at the close of the afternoon sessions an extensive commercial display of equipment and materials drew excellent attendance.

Most of the afternoon was taken up by 19 different workshops in as many classrooms. Five of the 23 demonstrators in charge of these workshops were commercial men, seven were classroom teachers, six were supervisory personnel in active service in the Aurora system, and five were visiting AV "experts" attending the state meeting.

Elizabeth Bloss, local AV director, and chairman of the committee that planned the meeting, had selected the workshop topics specifically requested by the teachers in her system. There were demonstrations of audiovisual techniques in subject areas ranging from art through zoology.

The two evening and the Saturday morning sessions, held at a downtown hotel, were attended mainly by the hundred or more IAVA members. The first of these, on Thursday, featured separate sessions for four professional interest groups—college-university, secondary-elementary, library, and industry. The latter, meeting as a separate professional group for the first time, worked out a most promising program of active service in support of the educators' activities.

The Friday evening session was a "What's New" report by William F. Kruse, visualized on an opaque projector and a 6-foot screen. The report covered 8mm sound-on-film, videotape and stratovision, thermoplastic tape, sound-on-filmstrip, and tutoring machines. The report on the last named was supplemented by James Brown, representing the Rheem-Califone Corporation.

At its business meeting IAVA adopted a proposal by DuPage County superintendent Roy DeShane to promote the formation of intermediate school district activity in AV, special education and similar cooperative programs. Continuation of the AV Education Forum in conjunction with NAVA was voted, and Tom Boardman, University of Illinois, and William F. Kruse were named as co-chairmen. Newly elected to the executive committee are Norma Bartz, AV director at Niles Township High School; Loren H. Allen, librarian at Peoria Heights; and Mary L. Mainwaring, AV Center head, Chicago Teachers College.

*Even in classrooms sunshine bright...*

## AO's NEW OVERHEAD DELINEASCOPE

*gives the clearest image you've ever seen!*

This revolutionary new overhead projector, by American Optical Company, was developed around a powerful 1000 watt light source to give you the brightest... biggest projected screen image you've ever seen. Even the extreme corners are sharp and clear because a specially designed Fresnel lens affords perfectly balanced illumination to every square inch of screen area.

This precision teaching instrument will project all the line, form and color of a 10" x 10" transparency up to a huge 177 sq. ft. screen image... in crisp, accurate detail.

You'll enjoy using this instrument because you face your class at all times... observe every movement and expression of subject reception and understanding.

AO's Overhead Delineascope helps give your program an unlimited flexibility that is not possible with any other AV medium. You can emphasize or dramatize by adding to your prepared teaching material on-the-spot.

You'll want to see all the new, exclusive features that make this instrument a practical investment in creative teaching. Your AO Salesman or Audio-Visual Dealer will be happy to arrange a demonstration at your convenience.

# Concern For A Dynamic Image

*Paul C. Reed*

Ever since the advent of projected pictures, the visual education specialist has been concerned about images. He wants the picture on the screen to be bright and clear. He wants to get the image there at the precise time the teacher needs it. He wants the image to resemble reality as closely as possible. He is really concerned about the quality of the image—the one on the projection screen. But what about the image he projects of himself as an audiovisual educator?

Should the audiovisual specialist be concerned about his own image? Should he care what others think his job is or should be? A public image is something a politician worries about because this influences elections. Great corporations must be concerned about images because this makes the difference between profits and more profits. The lawyer, the doctor, the artist, the teacher, and other professionals must be concerned about their images because this determines their prestige, their self-esteem, and their incomes, too.

Audiovisual educators must also be concerned about their own image because not only does this determine the kind of job they will do, but it may even determine their survival. For the audiovisual educator, the "public image" isn't important. But the image he holds of himself is. And his image as perceived by his supervisors and superintendents will determine whether or not this educational specialist is needed to meet education's needs today and tomorrow.

If the audiovisual specialist is going to survive in an age when continuing technological advances promise perpetual revolutions in the speed and methods of communication, he must create an image worth surviving. Furthermore, this image of the modern audiovisual or technological specialist, more than that of any other educator, must be a dynamic one, geared to the future of education.

Creating this dynamic image is not a task for the professional image makers. Madison Avenue and the PR boys may be needed later, but this isn't a first step. Nor can the creation of new dynamic images be left to the professional organizations, the conferences, and the professional magazines. These can only help.

The creation of the image is the task of the individual. In the audiovisual field, the creation of a dynamic image capable of surviving must be the concern and responsibility of every single person claiming audiovisual communication as his specialty. Everything he is and does on the job will contribute to that image. But a dynamic image cannot be created from a tintype character on a treadmill.

If a dynamic image is to exist and persist, the reality of the audiovisual specialist at work must disclose an educator more concerned with the ends of education than the means. He must be more able to create an idea than a photograph; more able to sense the significance of new equipment than to lift it; more interested in the use of a machine than in oiling it. He should be more interested in the film than in the machine that projects it; more interested in the picture than the substance upon which it's printed; more concerned with what happens to the mind that is learning than in anything else.

Back in the thirties, I knew personally and watched despairingly as an educator who had been a dynamic leader in the visual field finished out his educational career decrying the newfangled motion picture and declaiming the solid merits of the 3¼x4 lantern slide. Throughout the fifties some audiovisual educators kept hurling invectives hoping to bar television from their exclusive audiovisual worlds. Today there are "educators" responding to the challenge of startling new devices for the communication of knowledge and ideas by expounding learnedly that machines cannot replace teachers!

All we can say is that we hope sincerely that everyone in this field can become a little more concerned with the image he holds of himself as an audiovisual educator, and that he concern himself with developing the kind of dynamic image that will serve today's needs and the challenge of the future.

**Kodak**  
TRADE MARK

**“... quiet order helps our students concentrate—  
our Pageant Projectors help maintain this quiet.”**

*Says O. U. Johansen,  
Principal at the new  
Riverview Senior High  
School, Sarasota, Florida,  
selected by A.A.S.A. for  
its exhibit of outstanding  
school designs:*

“It’s an old problem:

“You’re showing a movie in one classroom. The sound must be loud enough for that class to hear, but not so loud as to spill over into other nearby classes.

“We feel that our Kodak Pageant Projector has contributed measurably toward our maintaining this school’s atmosphere of quiet order, so essential to a serious student’s concentration.

“Our Kodak Pageant Projector *operates so quietly, we don’t have to turn up the volume to drown out machine noises.*

“Since the Pageant has a good audio system, the entire class can hear the sound clearly without effort, even though volume levels are kept low.”

*If you’re not at the movie, you don’t have to listen to it . . . an important point to keep in mind. Your Kodak A-V dealer will demonstrate how quietly the Kodak Pageant Projector operates, and how efficiently it meets many other common A-V requirements. Call him or write for Pageant Bulletin V3-22—no obligation either way, of course.*

*Kodak Pageant Projector*

# The Audiovisual Wall

by Charles A. Huff

ONE of the likeliest of reasons for non participation in Audiovisual teaching is the unavailability and inaccessibility of AV equipment and materials. Often a teacher will forego the use of a tape recorder, motion picture projector or slide projector rather than go to the trouble of obtaining them from a locked cabinet on another floor, risking a schedule conflict with other faculty members, or tolerating the interrupting commotion which it entails. Add to these the necessities of extensive bother in obtaining films and tapes, inadequate fabricating areas and materials, and the irritation of malfunctioning equipment due to the neglect of previous operators. It is no small wonder that some teachers think "it just isn't worth it."

Many of these problems can be eliminated with the installation of a common multi-purpose audiovisual wall between two adjacent classrooms. In this wall would be incorporated all the audiovisual equipment needed for the two classrooms and it would be available at a moment's notice. The wall should be accessible from both sides, and equipment, particularly projectors, should be mounted on swivel bases so that either room could use the facilities. This swivel arrangement could be further improved by the use of sound proofed enclosures to reduce projection noises and insure the absence of classroom disturbance to the adjoining rooms. Sliding panels are the safest and most desirable means of opening these enclosures as they will not protrude into the room.

Others would have their own ideas as to what should be included in the AV wall, according to teaching purposes and funds available. However the wall itself would probably be the least expensive, particularly in new construction, and could be planned with allowance for future equipment as funds become available. It is possible that some teachers might be interested in making "professional" investments in their own AV equipment, especially since they will have

exclusive use of the equipment. Some items which should be considered in any case are: slide and motion projectors, tape recorder, television set, headsets, a materials fabricating and repair table, and storage drawers and shelves. More bulky equipment such as opaque and overhead projectors might be more advantageously stored elsewhere.

The audiovisual wall should be adequately wired, with its own circuit and a circuit breaker box for maximum protection. Each swivel based shelf could be equipped with its own outlet and wired to allow freedom of movement. A master switch on each side of the wall would be feasible as it might be desirable to keep most equipment constantly set-up, plugged in and ready to go. Also, it may prove advantageous and economical to wire all audio equipment to a single high fidelity speaker at the front of each room. A multiple use amplifier could be a further economical measure.

*Projectors.* Film and slide projectors should be located close to the inside corner of the wall to take advantage of the projection angle to the opposite corner of the room. The supporting shelves should be revolving and should be high enough to project over all obstacles. The enclosure for the film projector should be large enough to allow the projector to revolve with the extension arms and reels connected. This would make it possible to thread the machine without requiring the operator to lift it from the shelf, merely swinging it parallel to the wall.

*Tape Recorder* A tape recorder and a record player could also be included in the wall. However, if a choice must be made a tape recorder would be more versatile. Locally produced tapes are inexpensive and can be easily adapted to filmstrips or film slides.

*Head-sets* One might want part of the wall devoted to a pull-down counter shelf behind which could be found ear phone head-sets con-

ected to the tape recorder or record player. This feature could be utilized in drill work, make up work, or any class where individual help is desirable. The tapes could be teacher-made and would release the teacher for other duties.

**Television** The television set would be a welcome addition to the AV wall and is now becoming a fairly inexpensive item. Although it might be more desirable to have a separate set in each classroom, especially if the school is equipped for a closed circuit, one set here could serve two rooms. On-the-spot coverage reports and educational programs are becoming increasingly available during school hours.

**Material Fabricating and Repair Table** One section of the audio-visual wall should have drop tables on both sides with two way storage drawers and shelves between. These areas would be well stocked with necessary materials and

tools for fabricating filmstrips, overhead transparencies, bulletin boards or any other teaching materials. Also provision could be made for an installation to handle minor repairs such as film and tape splicing and maintenance of equipment which a teacher can perform, thus avoiding delays and postponements.

**Storage** Easily accessible storage shelves and drawers will increase the use of audiovisual materials. Adequate security of the storage facilities might encourage more teachers to buy and make better materials. Of course all school owned films and tapes could not be "hidden" in classrooms but privately owned materials and those applicable exclusively to a given classroom could be effectively kept in that classroom. Special shallow drawers for filmstrips and record shelves for film cans would be convenient and efficient when categorizing and using the materials.

*(Below is an artist's representation of Mr. Huff's wall)*

# “Do-It-Yourself” Language Lab

by Robert Wiseman

**I**N the past few years language laboratories have been one of the leading conversational topics among audiovisual educators, foreign language teachers, and manufacturers. From the various methods that have been developed for the teaching of a foreign language have come a number of different language laboratories. All of these language laboratories are basically one of four types, the individual listening, the group listening, the group and/or individual listen-response, and the individual listen and recorded response. Although there may be various other methods these methods are basic to all language laboratories.

All have some value in the teaching of foreign language but the method that seems to offer the greatest number of advantages and the greatest amount of versatility is the individual listen and recorded response. This method gives the student an opportunity of working at his own speed. It also permits the student to analyze carefully a spoken word or phrase and then to record it on tape for self-comparison with original pronunciation and intonation.

With this system the teacher may evaluate each student's progress and offer assistance when it is needed. It is also possible to add a monitoring circuit which will enable the teacher to listen to individual students while they are working on an assignment. With the addition of still another circuit, it is possible for the teacher to talk directly with the student and to give help through individual instruction in the difficult phases of learning a foreign language.

It seems obvious that the individual listen and recorded response language laboratory described above offers many advantages over the other systems which usually consist of a tape player or record player terminating into a varying number of earphones. Through these earphones the students may listen only to the master recording or listen and repeat after the recording. Their response may be connected to the set of earphones by means of a microphone so that they may hear their response more clearly.

It is evident that a group listening system, such as this, has many disadvantages. One is that all students who are listening must progress with the other students in order to prevent disruption of the group. Since all students do not advance or learn at the same rate of speed, the slow learners may miss a certain amount of vital information. On the other hand, if the faster learners are

required to slow their pace, there is danger of them becoming disinterested. Another disadvantage is that the student in a group listening situation cannot give a response to what he hears; or if he is permitted to respond, he has no method of comparing his own response with that of the recorded master.

The advantages offered by the individual listen-record response (IL-RR) seem to outweigh those of the other systems because the IL-RR system properly designed and set up can offer anything that the other systems are designed to do in addition to providing an individual speed and self-evaluation system.

It would seem that the IL-RR system is versatile enough for most foreign language teachers; therefore, when a school system plans the installation of a language laboratory, it should consider only the IL-RR system. This would be the ideal, but such a system at the present time is a very costly installation, so costly, indeed, that most schools do not permit such an expenditure of money. It is not uncommon to hear quotes for the installation of a 20-student laboratory in excess of \$15,000. This amount eliminates all but the wealthier schools. With this figure far in excess of their allotted budgets, the smaller schools are left out entirely. The purpose of this article is to help schools develop a language laboratory that is in keeping with the teaching trend of foreign language and with modest budgets.

#### Availability of Equipment

In attempting to determine the possibility of setting up an IL-RR system at a reasonable cost and on an "add-on" basis, it was necessary to investigate the features of available equipment. The first necessary piece of equipment was a small, lightweight tape recorder. Such a tape recorder must possess certain features to be

adapted to such a system. The following features were necessary for such an adaptation: single channel record—two channel playback (stereo) also, changeable to four track stereo; pre-amplifier output on both channels; simple operation; compact design; and built for hard usage.

The second major piece of equipment that would be needed to work in conjunction with the tape recorder is a three or four channel phonomic pre-amplifier/mixer. The pre-amplifier/mixer should accept a minimum of two high level inputs (phono) and two low level inputs (microphone).

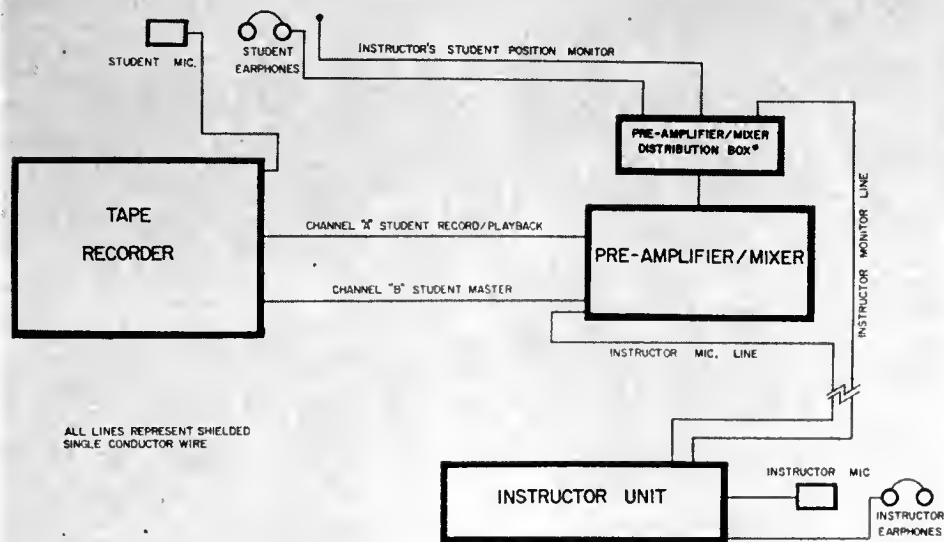

A set of earphones and suitable wiring, phone jacks and plugs completes the list of equipment needed to set up a complete IL-RR laboratory. The earphones should be capable of reproducing the full frequency range of the human voice.

The tape recorder that was found to match most nearly the requirements outlined above permits recording on only one channel and playback on two simultaneous channels. It will also play two or four channel stereo by a simple turn of a dial. By using the two-track four-track change dial, it is possible to record on any of the four channels. (The necessity of this feature will be discussed later.) Although this is the recorder chosen for this installation, it should not be construed as being the only available tape recorder which can be used. Any tape recorder that has these features should work without difficulty.

The pre-amplifier/mixer selected permits the mixing of four channels at one time, two of which can be phono and two microphone, or if desired four microphone inputs may be used. It should be noted that any mixing unit having these features can be used; however, the mixer chosen should be of the pre-amplifier type. This feature is necessary in order to raise the output of the earphones to accommodate the hearing requirements of individual students.

The earphone can be one of the lightweight

### EQUIPMENT COMPONENT DIAGRAM

\* MAY BE OMITTED BY MOUNTING OUTPUT PHONE JACKS IN PRE-AMPLIFIER/MIXER CABINET

models that fit under the chin or the headband type that go over the head. It is important that they be capable of reproducing the frequency range of the human voice or approximately 100-10,000 cps. For matching purposes with the MX6 pre-amplifier/mixer, the earphones should have an impedance of 2,000 ohms. This impedance should be used so that when two sets of earphones are used in parallel (student and teacher) the total resistance will be 1,000 ohms which is the output impedance of the MX6. When the teacher's set is not connected to the individual system a 2,000 ohm resistor will automatically be connected in the line so as to maintain the correct impedance load on the pre-amplifier output. (See schematic for the instructor unit.)

The wire used in connecting the equipment should be a shielded single conductor wire; and the connectors, because of their ability to withstand hard usage, should be the standard phone jack and plug.

### *Connecting The Component Parts*

The equipment and hook-up for each individual booth should be as follows:

1. One connecting cord from the pre-amp output on the tape recorder to phono 1 on the pre-amplifier/mixer.
2. One connecting cord from the stereo pre-amp output on the tape recorder to phono 2 on the pre-amplifier/mixer.
3. Tape recorder microphone into tape recorder.
4. Earphones into the output of the pre-amplifier/mixer.
5. A line from pre-amplifier/mixer output to the teacher's position.
6. A separate shielded line from the teacher position to the pre-amplifier/mixer microphone input.
7. One 16 ohm 10-watt load resistor into the speaker output of the tape recorder.

The connecting cord from the pre-amp output on the tape recorder to phono 1 on the pre-amplifier/mixer should consist of a short piece of single conductor shielded wire with a standard phone jack on each end. The cord connecting the stereo pre-amp output on the tape recorder to phono 2 on the pre-amplifier/mixer should consist of a cord as listed above with the exception that the plug going to the stereo pre-amp output on the tape recorder should be of the miniature type which can be readily obtained. The headset should be plugged into the distribution box as shown in the diagram.

The line from the pre-amplifier/mixer distribution box to the instructor unit should be a single conductor shielded wire. It should terminate directly into a phone jack or into a switch, whichever is desired, as shown in the instructor's unit diagram. The instructor's microphone line to the pre-amplifier/mixer should be a single conductor shielded wire separate from the monitor line going to the instructor's unit. This line may start in the instructor's unit from a shorting type phone jack or a shorting switch.

The 16-ohm 10-watt resistor, across the speaker output of the tape recorder, is merely a resistor soldered across the terminals of a phone plug. The purpose of this phone plug and resistor is to

inactivate the speaker and to prevent damage to the tape recorder amplifier which might result from no load on the output stage.

The teacher's unit can be as simple as a metal box with a phone jack for each student position into which the teacher can plug his (her) set of earphones, or a single earphone output connected to each student position line by means of a switch. The switches will permit the teacher to monitor the desired student position. The microphone can be connected to separate student positions by jacking it into the separate microphone jacks the same as for the headsets (again) by the use of switches. The teacher's unit should be entirely up to individual needs or desires. A sloping panel cabinet, available in many shops, will serve to permit the installation of many student position jacks as might be needed in most small labs. It is not considered necessary that the teacher should be able to converse directly with all students at the same time. If it should become necessary for the teacher to talk with all students at once, it would seem that the teacher should talk directly to the student. This would tend to establish a closer communication contact than is possible through the use of "piped sound." This direct communication would probably prove more effective as well as serve to alleviate the monotony of listening through earphones.

With the IL-RR system it is possible for the student to listen to a pre-recorded tape (master tape) and give a response which will be recorded on the same tape that is being played through the tape recorder. At the same time, the teacher may listen to the master tape and the student's response. If the teacher hears a serious defect in the student's response, she may talk directly with the student about the error without having her voice recorded on the tape. This gives the student a chance to compare his unknown error with the same error after the teacher has called his attention to it.

### *Recording The Master Tape*

Many foreign language tapes are available for the purpose of recording a retainable set of master tapes. A check of foreign language tape catalogs will soon acquaint one with many sources which will rent pre-recorded tapes for the purpose of making duplicates. If it is desired tapes can be made by an affluent speaker of the foreign language. Once the master tapes are made, they should be kept in a safe place so as to prevent accidental loss or erasure and used only for the purpose of recording student master tapes.

### *Recording The Student Master Tape*

In order to permit the student to listen to the tape and record at the same time, it is necessary to have two channels on the tape recorder. One for recording and playback, and one that is only for playback. The channel that can be played back only will be referred to as the student master channel or tape.

To record the student master tape, the tape recorder should be set to record on "B" channel. After the recording has been made, the channel selector dial should be set to "A" channel; then

he two screws holding the recording head cover in position should be removed along with the cover. It is now possible to lift off the channel changing dial. The reassembly of the head cover now makes it impossible to change the channel position. Channel "B" which will now be played through the stereo pre-amp output cannot be erased, but the student may record on "A" channel as many times as she wishes without harming the "B" or student master channel.

### Setting Up The System

In setting up this system the actual connecting of component parts can usually be performed by students who are interested in electronic and audiovisual work.

Although this system can be set up with as many units as needed, it is recommended that they be set up experimentally first and more added as the need develops.

Individual booths may be used, if desired, although it is not completely necessary provided that each position is set approximately four or five feet apart. In the average room and under

average conditions interference will not be excessive. The final answer to the question of booths will have to be decided by the teacher and the noise conditions in the lab room.

### Cost of Equipment

The cost of setting up each student position including the wiring and individual position share of the teacher's unit is approximately \$225. This figure may vary depending upon school prices.

### Facts About the System

It is possible to add or subtract units from the system whenever necessary without disrupting the entire lab. This addition or subtraction can be performed in a matter of minutes by a simple plugging or unplugging of phone jacks.

Perhaps one of the most valuable features of this system is that, if foreign language programs differ from the present trend, this system can be disbanded with relatively no monetary loss. The tape recorders are returned to recording purposes and the pre-amplifier/mixers may be put to public address use in the school system.

# The Diggleswitch

by James DeVirgilio

DOWN through the ages pedagogues have been known for a "jargon" common to their group. True, all professional groups have a "jargon" peculiar to their profession, but few of these groups are in the "fishbowl" of society such as we in education. Because of this we come under the scrutiny of other professional people, who through using a language of their own, seemingly resent the terms we use. Nevertheless, for lack of a better term, I shall attempt to discuss the building of concepts with prospective teachers.

Concepts are the important elements of a lesson; if a teacher is concept conscious he is not likely to fall into a "fact rut." The focal points, those of real value, will be the important ones of a lesson and the related facts will follow.

For an example let's consider the concept of freedom for junior high class. An interesting situation arose when this was used in one of my classes. Immediately most of the students thought in terms of political freedom. Their own experiences were coming to the fore as being of primary concern in developing an understanding of this concept. Consequently, they thought of using the Cuban revolution and the present differences between Communism and Democracy.

These considerations are noble and of some value, but they reveal a basic weakness on the part of these prospective teachers to see the need of developing the concept of freedom based on the immediate and past experiences of the youngsters they were teaching and not on their own. Had they considered the children's experiences in a typical 8th grade class, freedom as a concept would have had more meaning. This would be a good starting point, and could easily be expanded to include freedom of the press, speech, action, political parties and ideologies which are the peripheral facts. Therefore in developing a concept it is imperative that we call on the experiences of the youngsters and relate these to daily living, before we expand into more abstract consideration.

There is still the problem of concept communication. If we use verbal symbols alone, unless our students are thoroughly familiar with the concept before it is presented, we will develop verbalizers who have little understanding of the impact the concept has as it relates to a total situation. So we come to the conclusion that the more abstract and distant from the learner the concept, the greater the need for aids to clarify it. I would go so far as to say the antithesis is true also; the more familiar a concept, the more difficult it becomes to develop clear insights as to its totality. There are preconceived notions interfering with understanding. These have to be brought to the surface by the teacher and clarified.

What are aids to communication? One only has to look at Edgar Dale's "Cone of Experience"\* to get a full view of them. These include such things as filmstrips, slides, dramatizations, models, television, bulletin boards and exhibits. There are many more.

The point for the present is to show how verbal symbols are just that: symbols. Consequently, what may be clear in the mind of the one speaking may be meaningless to the listener. This was illustrated rather emphatically by a student, Sam Brannock, who appeared disinterested but who in reality had figured a way to show that concepts verbally presented can be beyond recognition. No one would deny that he relied on unusual extremes to prove his point.

In developing his "Diggleswitch," Mr. Brannock states that he wanted to take something very familiar to the students, dress it up in verbal apparel unrecognizable and meaningless to them and then show, by the use of simple aids, how learning would ensue. Before you read the following, be sure not to look for the answer and see if you can understand what it is.

## The Diggleswitch

The diggleswitch is a manually operated, alloy enclosed instrument for the purpose of initiating the fulfillment of certain specific libido passions.

There are several different types of diggleswitches, but I will explain only one.

This particular one depends upon the action of a louvered edge disc, hereafter known as a toggle, upon a resistant, conoidally fracturing cylinder, the finch, releasing a particle of extreme molecular activity, the fear-dunk, which is directed in a parabolic curve to a device for the regulation of hydro-carbon oxidation. This device, the zebben, is connected to the constant pressure cellulose absorption tank where it obtains its primary reactant.

When the toggle is manually activated, the integration of the aforementioned parts serves to produce the necessary function of the diggleswitch on the zebben, which, when applied to the libido satisfying device, achieves the ultimate response.

*(What is the diggleswitch? See page 596.)*

# Teaching The United States Constitution By Tape

by Channon H. Krupsky

Students checking the visual presentation which grew out of their tape recording of the President's Message.

**M**Y class of 7th grade boys and girls was faced with the necessity of learning the terminology and the greatness of our Constitution, the weighty decisions it embodies. I realized that, to make this unit interesting, the creation of a stimulating situation would challenge my ingenuity and ability as a teacher.

The opportunity for employing the medium of tape recording in teaching this unit on the Constitution of the United States occurred when the newspapers carried the announcement of a forthcoming message by the President on the State of the Union.

Since a tape recorder was available in our school, we were able to set it up and record the complete State of the Union message as given by President Eisenhower on January 6, 1960.

I obtained a copy of the message as it was printed in the newspaper and marked with red pencil those phrases which would be significantly connected with the Constitution. Then, replaying the tape, I noted the footage numbers shown by the recorder corresponding to the phrases I had marked on the newspaper account. Next I checked these particular passages with the Constitution and jotted down the exact article and section it referred to. I also checked references to history and specific offices and people and used several references to locate protocol and traditional procedures and seating for this occasion in the function of our government.

Our class was further prepared by charts and pictures which, displayed on a bulletin board, graphically described the organization of our government.

Our unit began with a brief discussion about the State of the Union message as part of our "current events" period. Not many students were alerted to this event nor were they particularly interested. I then asked the boys and girls if they would like to hear this message. The response was good; perhaps listening meant not having to "do" something.

I did not intend that the class should listen to a lengthy address which was above their understanding or endurance. For a short period we listened, particularly to the introduction by the narrator which gave us a complete word picture

of the setting for this occasion, and to segments of the message itself. This was followed by more discussion. Questions arose:

- Why did the president give this message?
- Did all presidents give such a message?
- What was a joint meeting?
- What was meant by "Speaker of the House"?
- How did the vice president become president of the Senate?

To answer these questions, we would listen to segments of the tape for discussion and interpretation, then we referred to the particular articles and sections of the Constitution.

As the climax to this unit, the students wrote their own interpretation of the significant terms in the preamble. The student whose interpretation was considered the best was given a chance to record it, with the whole class, in a speech choir background, reading the preamble. This

reading of the preamble was recorded on the same tape following the President's message.

We loaned the tape and other materials to several other 7th grade classes. A copy of the tape was made and is now in the library of the Audio-Visual Department of the Kansas City School District.

This unit on the Constitution emphasized the importance of modern audiovisual materials in making the learning interesting, stimulating and challenging. As a result of this unit we are using the tape recorder in other units this fall. We recorded some of the convention highlights and later will record the highlights of the presidential election itself. We will use these tapes to stimulate interest in units on American history, the development of the American political system, the executive branch of the government and related areas.

## I. Introduction

- A. Joint meeting of both Houses of Congress (Article II - Sec. 3)
- B. Presiding Officers
  - 1. Speaker of the House (Sam Rayburn) (Article I - Sec. 2)
  - 2. President of the Senate (Richard Nixon, Vice President) (Article I - Sec. 3)
- C. President announced by doorman. (Historical significance - relating back to arrival of the king.)
- D. Presidential Procession
  - 1. Senators and Representatives as honor guard
 

8 Senators	}	Historically similar
8 Representatives		to honor guard for kings.
  - 2. References made to majority and minority leaders - leading the procession. (Historical significance—Our two-party system—our democratic principal of majority and respect for the minority.)
- E. Presence of Dignitaries
  - 1. President's Cabinet (Article II - Sec. 2)
  - 2. Ambassadors, ministers, etc. (Article II - Sec. 2)
  - 3. Supreme Court—Justices (Article III - Sec. 1)
  - 4. Foreign Representatives (Article II - Sec. 3)
  - 5. Military chiefs (Article II - Sec. 2)
  - 6. Gallery (citizens)

Only segments which reflect articles and sections of the Constitution and are applicable to the learning situation for 7th graders are listed.

The following are introductory phrases from the presidential message, with the numbers indicating the place on the tape, and with the particular reference to the Constitution:

## II. The Address

- 1. A multi-lateral treaty .....No. 85 (Article II - Sec. 2)
- 2. This concern for .....No. 98 (Article I - Sec. 8)

## The Friendly Beasts

(Grover-Jennings Productions, Inc., P. O. Box 303, Monterey, California) 15 minutes, 16mm, sound, color, no date. Price not available. Teacher's guide available.

### Description

*The Friendly Beasts* is the story of a little wild goat from the mountains of Judea that wanders to the inn yard at Bethlehem on the first Christmas Eve. The other animals that came to the inn yard to give of themselves for the Baby Jesus are the "Friendly Beasts" referred to in the traditional Christmas carol sung at the beginning and ending of the film. The conversations of the animals are also taken from the Christmas carol.

Judea was truly the "land of animals," for there were many that roamed in its mountains. There were wolves, jackals, wild dogs and deer. Many birds also lived about but these were not "Friendly Beasts."

Those considered to be "Friendly Beasts" were the dove, bird of peace; donkeys, used to carry heavy packs; oxen, the beast of burden; camels, used in making long journeys; but most valuable of all the animals was

the goat. The goat was valuable for its meat and milk, while its hair could be woven into cloth. A goat also made an excellent pet and often slept with a family's children. Its nimbleness of foot enabled it to climb high and rocky places in search of the few blades of grass that grow in this land.

There were many different trees and plants that grew in the land of Judea. Among these were olive and fig trees, date palms, grapevines and cactus. These grew wild and were as wild as the little goat in this story.

As the story begins, this mischievous little goat, wandering about high in the mountains of Judea, came upon a flock of sheep. She ran toward them, startling them with a cry, and they fled, leaving two little lambs. But the little wild goat, showing a gentle heart, started them after the flock so they would not become lost.

The little goat then searched among the rocks for food, her nimble feet picking the way carefully. She had come near to Bethlehem when, being thirsty, she began a search of water, for without water she could not live.

Frightened by a huge bird, she ran onto the sands of the desert—where she almost stepped on a snake. Frantically the goat ran until, finding a

little spring, she drank her fill and then found shelter in a cave for the night.

Suddenly, a strange mood pervaded the night. A bright new star appeared in the heavens, a great light appeared over distant hill, and music from afar came to the cave. This was the night of the first Christmas.

Beckoned by these mysteries the little goat ran to the wall surrounding Bethlehem, found a gate and entered the inn yard where she was greeted by a "Hello!" from a donkey.

"Can you talk?" asked the goat.

"All of us can talk tonight," answered the donkey. "Each of us gave a gift to the Baby Jesus. I carried his mother to Bethlehem. What do you have to give?"

"I don't know," answered the goat. "What can I give?"

"Why don't you ask the dove?" said the donkey.

The little goat progressed from one animal to the next discussing their gifts to the Christ Child. The dove had sung a lullaby to help the Savior to sleep. The ram had given his wool to keep the Baby warm and the camel suggested the animals could give protection to the Christ Child and his family.

The cow offered the little goat some of her hay. As they ate, the cow said she had given her manger for a crib. The cow also said that when the Holy Family left they would have only the donkey to take with them.

When the little goat had finished eating and lay down to rest, she began to wonder how would the Holy Family get milk for the Baby Jesus. This could be her gift to the Christ Child. She would give herself and become the family goat. She carefully groomed herself and the next day as the Holy Family left Bethlehem the little goat was a part of their procession. In this way the little wild goat from the mountains of Judea became one of the "Friendly Beasts."

### Appraisal

This film is a new and refreshing approach to an age-old story, with animated scenes of the First Christmas at both the beginning and the end. Then the film progresses into the realistic animal scenes which are

beautifully photographed as well as being informative in nature.

The general format of this film is so presented that it could be used with pre-school, primary, or lower intermediate age children. One of the film preview committee members suggested that a second version of the film might omit the animated scenes, thus making it less seasonal in its appeal. The film could be used by schools, churches and general groups for programs or for study. The musical framework of the film might also interest music education groups.

—Helen Dzur

### Weather Scientists

(United World Films, Inc., 1445 Park Avenue, New York 29, N. Y.) Produced by National Film Studio in cooperation with United States Weather Bureau. 16mm, sound, color, 1960. \$135.00.

### Description

*Weather Scientists* highlights the need for weather information through surveying common weather phenomena, pointing out the influence atmospheric elements have on persons' economic and recreational lives, and reviewing the functions and operations of the United States Weather Bureau. Instruments used for making, reporting and recording observations are explained in terms of the specific functions each perform.

The relationship between human activity and weather is illustrated in the use of a montage of clouds with various weather conditions and the effects these types of weather have upon the fun of swimming, the inconvenience of shoveling snow, the selection of an aircraft's flight plans, and navigation for all types of water commerce. Weather is defined as the condition of the atmosphere at the point of observation. The needs of individuals to know in advance what weather conditions will be is established as a principal reason for the varied operations of the United States Weather Bureau.

Using a map, the operations of the Weather Bureau are traced from its central office in Washington, D. C., to the regional offices which coordinate many different observations which are reported back to the central office. Observations are indicated as coming from local U. S. weather stations, fire tower observers, airline pilots, ocean vessels, and scientists engaged in meteorological research in this country and throughout the world, including both polar zones.

Weather maps contain a variety of

# BUDGET WISE

# AUDIOTRONICS

*AudioTronics* CORPORATION • BOX 505, NORTH HOLLYWOOD 6, CALIFORNIA

data which is gathered by many types of instruments. A meteorologist is introduced to explain the more common instruments used. The barograph and barometric pressure's relationship to weather in terms of the isobars forming highs and lows on the weather map are illustrated along with the thermometer and the significance of the freezing line on the map. He also shows how the wet and dry bulb thermometers on the psychrometer are used to measure relative humidity, the wind vane for wind direction, the anemometer for wind speed, and the

rain and snow gauge for amounts of precipitation. Radio sondes and their balloons are used to gather atmospheric data at altitudes up to 20 miles. The sunshine recorder, ceilometer (for determining the height of the cloud ceiling) and radar all assist in making observations. Overprints of new technical terms appear while discussed.

Weather facts are plotted on large official maps that are redone for use on television. Computers are used to sort, combine and analyze. Maps are transmitted by other electronic devices.

In concluding, the role of volunteer weather reporters, a job open to interested boys and girls, is described. Forecasting is shown to need many observations since tomorrow's weather exists today or will be caused by conditions today in regions near or afar.

evaluation committee felt that this film was more effective than field trips they had taken with children to a Weather Bureau office, but it could also serve as a preparatory or follow-up activity.

Content is centered upon instruments, their function and the correlation of the varied observations. For an explanation of what causes weather phenomena, other films, filmstrips, or supplementary readings would be required. Throughout, the pace of content development is slow enough that children should have no difficulty grasping the presentation.

High technical quality is evidenced throughout but especially in the selection of views of cloud formations, well employed close-ups, and the personal touch developed in the sync-sound sequence in which the weatherman explains his instruments. The small-sized letters used in the overprint titles of meteorological terms create a slight visual problem and constitute the only weak point in an otherwise excellent film.

—Richard Gilkey

Intermediate and junior high pupils will find *Weather Scientists* an effective survey of the activities of weather stations. Several members of the

## Did You Guess The Diggleswitch?

(Author De Virgilio continues.)

I'm sure the readers feel as the students did. They had no knowledge of this object, so familiar to them in real life yet in this case so totally obscure. Several more readings proved to be of no value. Words were words. Something else was needed.

We then used a few simple lines outlining the form as in the diagram, putting each line on the board as it was verbally explained. Immediately the group reaction showed that they understood. You could see the surprise on their faces for not recognizing something they felt they should have known. Aren't many of our classes the same? The thrill of understanding bubbles over and the spontaneity of it is stimulating. So it is that, in the classroom, aids of all sorts are the equivalent of adjectives and adverbs in a sentence. Yes, the diggleswitch is a cigarette lighter.

What does all of this prove? It proves that in teaching we are merely calling on the learners to recite if we:

- (1) fail to clarify the concept for ourselves before we started.
- (2) ignore the total field of the concept.
- (3) overlook the background of our students in relation to the concept as our starting point.
- (4) reply too heavily on lecture or verbal symbols as our medium of communication.
- (5) ignore the need for aids to communication.
- (6) fail to see the relationship of facts to concept.

Common though knowledge of this may be, we still see a lack of application of these good principles in the classroom. Why?

# AV in the Church Field

by William S. Hockman

## One Faith

Out across the world, Christians are becoming increasingly aware that they are one fellowship and share one faith. This faith may take many forms, include many institutions, and embrace many peoples, and be amid many diverse cultures. Yet, basically, it remains one faith. But, how can that be spelled out; shown, and made clear?

It's not easy to do, but the 28-minute color film *Household of Faith* does it pretty well. The film begins with 12 people, from as many countries, sitting at a circular table on which is a huge globe of the world. It ends with many kinds of Christians gathered at the table of the Lord for Communion. In between we witness cooperation within the household of faith. First, in the Christian Medical College at Ludhiana, India; next, at Madras where the College of the Church of South India is staffed by leaders from many denominations. Again we see this spirit at work in the Theological College of Bangalore. Lastly, we see the Indian Christian Church sending fraternal workers to Africa and Thailand where they will join Christians from Korea, Germany, the Philippines and America.

Twelve denominations sponsored this film which was produced by BFC of the NCC. Since it is one of the official films on the study theme "Into All The World Together," it will have wide availability through local film rental libraries. First, inquire of these; then write to BFC, 475 Riverside Dr., N. Y. 27. This is a B-plus production job, with an "A" rating on general utility for young people and up in church and community.

## Procession, Indeed!

Early in my ministry a layman remarked that something was "as difficult as leading a parade in worship." Churching the moving and mobile population of America is just about that hard. This is brought out clearly in the film *The Procession*, distributed through the BFC of the National Council of Churches, 475 Riverside Dr., N. Y. 27. This is a motion picture on the study theme "Heritage and Horizons."

Photographed in Chicago, this unusual motion picture utilizes the interview technique to explain the mission of the church—to people in the heart of a business district, to young families in a suburban community, to those who live in a rapidly changing area of the city, and to those in a badly depressed community. Here is the face of the city. The church must be here, but how? This film predicts new philosophies for churches both urban and suburban. With America on the move, what moves should the church make? A highly mobile camera and a good commentary give some of the answers in 28 minutes, and for a rental of \$8.00 your church or its groups may see and hear these answers.

## Filmstrip Evaluations

*Stories About Church* is a 4-unit series of color-art filmstrips by Family Filmstrips for use with 4 and 5 year olds. These titles — "We Go To Church," "Happy Times At Church," "Making Friends At Church," and "Gifts For Our Church"—are closely related to kindergarten lessons.

I liked the art. It is simple. I liked the commentary. It says enough; does not over-talk the pictures. I liked the accent on *church*. Notice the titles; not 'church school'. The larger context is what we need. I like the objectives given on the filmstrips. The concepts are strongly presented. The teacher can't miss them. The basic stand out. No homogenizing of big ideas into baby-food here, as: "Now children, give your pennies to Jesus." Bobbie Trent (writer), Dorothy Grider (illustrator) and Vic Perrin (narrator) make a fine production team. The utilization time is just right; 4 minutes. The leader's guide is helpful and should be taken seriously. This is an "A" job!

SVE brings us two new filmstrips on Christmas in song: *Christmas in Sacred Music* and *Christmas In Folk*

DEPT. 22, P. O. BOX 7509, TULSA 18, OKLAHOMA

*Music.* Both are good in content and format. Both are useful. The first can be used with juniors and up where it is to be the 'program'. The origin of four sacred carols is given, followed by the words of several stanzas. Organ and mixed chorus provided the musical background. Groups will find it easy to sing along with the music. The four carols are: O Little Town Of Bethlehem, Silent Night, We Three Kings of Orient Are, and Joy to the World. There are 41 frames.

The companion filmstrip, *Christmas In Folk Music*, brings us the stories and words of: Deck the Halls; The Holly and the Ivy; Good King Wenceslaus; Here We Come A-Caroling; God Rest You Merry, Gentlemen; O Christmas Tree, Up On The Hometown. The stories are short. The music is festive. The art nicely composed and the color good. Here is a filmstrip for the party in either church, home or school. It will be enjoyed by everyone from the third or fourth grade up. There are 44 frames.

Each filmstrip alone is \$6.00, with record \$9.00. The record alone is \$3.00, and the complete set of two filmstrips and one back-to-back record is \$13.00. Order direct from SVE, 1345 Diversey Parkway, Chicago 14, Ill.

For primary and junior children SVE has produced a lovely 35-frame color-art filmstrip entitled *Christmas Gifts of Love*. It concerns a family. Each member decided to make a gift for some other member, and the family together decided to give, through their church, to others. On Christmas morning Mother and Father and Betty and David sit around the Christmas tree and are happy about what they have done. Good job. With record \$9.00; \$6.00 otherwise.

### Notes and Comments on Films

We can learn something about a film, of great importance in estimating its quality and utility, by noting what the producer says about it. The producer of *How Vast Is Space?* (Atlantis Productions, 7967 Sunset Blvd., Hollywood 46) says "This film deals with basic information in a manner which will not become obsolete," and we are inclined to agree with him.

Designed for junior high school science classes, this film follows the line of science in dealing with the geography and structure of space among the stars and within the atom. In the church we might use this film to ask, What of God in a universe like this? How shall man regard himself in such a cosmos within such a universe? Is the creator of the galaxies aware of man, this very small speck on a quite small world, in a solar system

which could blink out and not even be missed in the vast universe?

While the taproot for religious faith must grow in other than scientific topsoil for most of us, it is good for the faithful to take a look now and then at how vast space really is. This 18-minute color film, with good cinematic qualities, can be useful in this role.

While not often yielding to the temptation to comment on theatrical (35mm films) we will do so in the instance of *Masters of the Congo Jungle*. A great film. The finest nature photography I have seen. Superb camera work; extraordinary on-location sound; color that's rich and true, and a continuity which sets the native African delightfully within his general abode, nature. Produced by scientific societies, it is good cinema.

Here is proof beyond doubt that if a film is interesting it will also be entertaining. Don't miss this one, and when a 16mm version comes along, as we hope it does soon, churches, clubs, schools of all kinds will give this superb film a large and appreciative audience.

*New Experiences For Mentally Retarded Children* (b&w, 36 minutes, from the Virginia State Board of Education, Richmond) is a training film for the teachers of such children, and also normal children. Here before our eyes is the patience, the tact, the skill and above all else the love which all good teachers have in more or less degree. This love is evidenced by the total acceptance of these children by their teachers. Given a religious utilization context, this film can give teachers a peek into the depths of love-in-action, or teaching.

*Indian Summer*, a b&w film of some 30-40 minutes, tells of a valley that is to be flooded by a power project, picking up the story of one old man who says he will not move—but does. As the camera follows him around—in the manner of good documentaries—his plight and pathos touch us deeply and we reflect on the human price of our marching technological progress. Produced by Folkfilm Productions.

Here is a trinity of useful films (Southern Baptist): *The Great Challenge*, 30 minutes, on the work of the church school teacher; *Preparing to Teach*, 17 minutes, filmic description of what real preparation involves; and, *Teaching The Word*, 17 minutes, accenting the central importance of the Bible in Christian education (as the Southern Baptists see it). The first two have little or no denominational reference, and the second title is highly recommended for use with teacher groups.

Facts and fancies about beverage alcohol are dealt with interestingly and effectively in the 14-minute color film *Theobald Faces the Facts*—and flunks! But you might, too. So might your youth group. Why not give them the various tests (of the film) to see how well they can do. By the National WCTU, Evanston, Ill.

Some years ago an American official of a 'foreign' mission board (that was the term then used) said he found himself way down the line going through the customs line in an Indian city and no longer first as Americans and British were wont to be, and knew right then that a new day had dawned in missions. That was the day of the 'fraternal worker'.

This new day, and what it means, is set forth in an interesting film, *Passport to Dehra Dun*. When an Indian churchman explains to a government official *what* a fraternal worker is and does, the entry of an American is granted. This explanation constitutes the meat of the film for us and we see a village worker at his tasks, visit a great medical school, and have pictured for us the meaning of 'dirty-hand education'. Good and useful film; 28 minutes; color; produced by the United Presbyterian Church's commission on Ecumenical Relations, 475 Riverside Dr., New York 27, N. Y.

*Mission In Bolivia* (25 minutes; color; Board Missions, the Methodist Church, 475 Riverside, N. Y. 27) is an interesting, informative and moving documentation of what the Gospel means to agriculture and education in this Andean country. Did you know that the 50-year-old Francis Harrington School in La Paz has 1,400 students, that the government has given special honor and recognition to the church-sponsored Cochabamba, and that this country is larger than Texas and California combined? Neither did I!

Most mission films to date have eentered on a description of the missionary process, and *Beyond the Night* is such a film. A professional thief enters a church on New Year's eve and is never quite the same after that. This slow change of his is the stuff we see in the film, and it is put together interestingly. By United Presbyterian Church's Ecumenical Mission, 475 Riverside Dr., N. Y. 27; 28 minutes.

We have spoken of the fine utility of the Methodist "Talk-Back Series," 15-minute b&w TV films which rent for \$4.00 and are excellent discussion starters. *The Victims* sets before us the problem of police methods, and Officer Travers and his methods will be defended by some and condemned by others. If you don't believe this,

just show it to a group of men, women, or young people and watch what happens when the lights go on! There are 26 titles in the series. Send to TRAFICO, Nashville 3, for descriptive material.

Latin America is the subject for study in 1961-62, and the film *Little Man Stand Tall* will help us understand the missionary process in Paraguay. As with the other titles above, this film shows the Protestant faith winning its way by its appeal to the minds and hearts of people and not by any kind of coercion. It helps all kinds of church-neglected people stand tall! Produced by the United Christian Missionary Society, Indianapolis, Ind., it does a good job of spelling out visually what 'missions' means.

Church parties would improve, in most situations, if both young people and their adult advisors could see and take to heart the excellent advice given in the 10-minute animated color film *Let's Have a Party*. Good parties don't happen; they are planned; they run on tracks of principle, and the film shows what these tracks are. By Broadman Films, Nashville, Tenn.

### This and That . . .

- The "God's Wonders" series of 12 10-minute films produced by Church Craft of St. Louis have now been acquired by Concordia Films, 3558 S. Jefferson St., St. Louis 18, Mo. Produced for children, and designed to show God's handiwork in nature, these useful films should now find a broader usefulness in the church at large.

- The SVE Religious Catalogue is available now. It lists many new filmstrips and over 600 2x2 color slides for instructional or devotional use. Also, it lists over 100 Great Art Prints which are suitable for framing or study.

- Sticking filmstrips! I had trouble; my students had trouble; a lot of other folks had trouble with filmstrips sticking in the projector this damp and humid summer. What to do? Cathedral Films, Inc., says that complaints came only from humid areas, where the strips absorbed moisture. When the heat of the lamp hits them they sweat and stick. A phone conversation with Ben Peirez of Viewlex, Inc., brought out the same facts; and more importantly, that his company is expecting to announce, by the time you read this, a new filmstrip gate that won't stick however wet the strip.

- Several times this summer we were told by church leaders that their table-type filmstrip Previewer had been a good investment. They found what I did. Teachers will use it when they will avoid the bother of using a projector for preview and study. It will stimulate use, and improve it, too.

# AUDIO

by Max U. Bildersee

One of the nice things—and there are many—about this audio business is that things are happening all the time. Sometimes you know well in advance who is going to publish what and when. And then comes the time that you know absolutely nothing of a tremendous project and you stumble on it much to your pleasure and delight.

We had the latter experience earlier this year in Chicago when we met Mack Reed. We had just entered the exhibit area at the NAVA convention, and the first booth we stopped at carried the new and high sounding title Academic Recording Institute. We stopped to ask questions, we remained to listen and ask more questions, and thus learned for the first time of the most ambitious and potentially far-reaching recording project of the decade.

Where many major record distributors in the educational field began with one or two records and grew slowly, varying titles and talent to develop exciting libraries, the Academic Recording Institute has done just the opposite.

First they developed an idea which, succinctly, is 'investigation in depth' and then decided on using the phonograph record as the medium by which the ideas of outstanding current figures could be presented to the greatest audience. The thesis is: scholarship

and artistry for group and individual listening.

Then, after the idea, came the planning. The administrators went to the drawing board, so to speak. They created a blueprint for this unusual project which involved such outstanding people as George Jean Nathan, C. Northcote Parkinson, Samuel Eliot Morison, Ashley Montagu and Charles Frankel. The areas these men represent are *Taste and Genius in the Arts*, *Politics: The Folklore of Government*, *Morison by Land and Sea*, *The Nature of Human Nature* and *The Philosophical Perspective*.

Having drawn the rough plans, prepared the blueprints and secured the best materials, it is not surprising that Academic Recording Institute has gone on to build an exceptional library of records which should find broad acceptance in secondary schools, colleges and universities and libraries throughout the English speaking world.

John Mason Brown, eminent critic and author who has also had a lively career on the lecture platform, deals with *Taste and Genius in the Arts* under the headings "The World of the Theatre," "What is Greatness?" "The Artist and His Times," "Laughter," "Development of Style," "The Revelation of Character," "Biography and Autobiography," "What is a Classic?" "What Determines Taste?" and "Men and Ideas." Good listening, all of them,

in the variety of areas which Mr. Brown is so well equipped to discuss.

The technique employed is that of the informal interview, with the second person not only asking questions but also offering ideas for the featured speaker to accept or refute and citing examples, all of which contributes to a fast moving presentation. Serrell Hillman, a journalist who has served the news services, been a correspondent and is a bureau chief for *Time Magazine*, gracefully and skillfully guides the discussions with John Mason Brown but does not intrude to the discomfort of the listener.

High school teachers, college instructors and librarians will be interested not only in hearing these recordings but in offering their students a chance to hear them as well. Small, selected portions can be presented in class to stimulate discussion. Smaller groups can comfortably listen to longer portions, and individuals listening alone can pace the audio experience and hear the entire recording at one time.

## Selective Timing

We draw these differences because, generally, the adult optimum listening time is not over 15 minutes—more nearly 10 to 12. At the end of this short period there must be diversion if comprehension is to be at a high level. With modern communications equipment in which each student hears via headphones rather than a loudspeaker — and consequently is moved into closer physical approximation with the original sound source, these time suggestions are subject to extension.

True not only of these particular records, but of all of the records in the series, is their potential use in home entertainment. Ideas can be fascinating, and listening in a social environment will give added meaning to these recordings to a great many people. In the living room or den they take on a personal meaning which may be lacking in the stricter institutional environment of the school or library.

Libraries have herein an exceptional opportunity to exploit these 'name lecturers for the benefit of their patrons. It is entirely possible to schedule a year-long lecture series for a variety of interested people using these records in the appropriate order of presentation on a weekly basis. What a tremendous opportunity to bring these experts to the attention of the community in a series of evening auditions followed by open discussion. And, too, there is always the opportunity to present these for teenagers in a similar series of special program

John Mason Brown, right, is interviewed by Serrell Hillman in the series put out by Academic Recording Institute.

through the library or through the school or as a cooperative program.

In addition to the accepted classroom and instructional uses, schoolmen can schedule listening periods during free periods for interested students. These can be scheduled during the free luncheon period and be used both for relaxation and intellectual stimulation. During the 40-week school year students can be introduced to the historical acumen of Morison, the critical know-how of Brown, the sometimes 'tongue-in-cheek' but always challenging attitude of Parkinson and the scholarly approach of Ashley Montagu or Charles Frankel. It is only through such devices that today's young people are going to be introduced to such men and seasoned by their experience.

This proposal can be enlarged upon easily. There are sufficient recordings of a challenging artistic and intellectual nature to schedule a variety program throughout the school year. There are enough intellectually gifted and interested students to justify the program. And there are public relations media within the school to make these programs broadly attractive. The year-long listening program can be planned by students with or without adult supervision. The whole area of the History of Music can be included in the program. There can be plays, readings of poetry. There can be musical programs featuring style, instrument, artist, orchestra or composer. The variety is endless, and today's teenagers faced with the challenge of contemplating, planning and executing such a program will rise to the challenge.

We find more and more evidence that despite the highly publicized 'headline stuff' which involves a few young people there is a definite preponderance toward decency among

young people. The decade ahead will see a marked trend in this direction and it behooves our educational institutions at all levels to grasp leadership in this and to offer the finest information available and to create an attitude by precept which will impress upon all—young and old alike—that decency is normal and that contemplative individuals are the backbone of the national and local community.

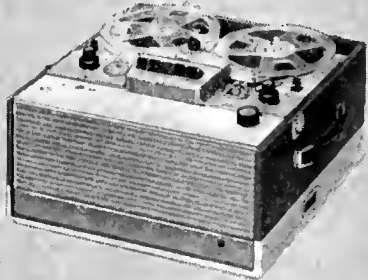

How many of your students understand Parkinson's Law? How well do you know its origins and applications, even in the school of today? Is the speaker serious, or is he teasing the listener with his presentation. Only through actually hearing it can schoolmen know and be able to advise their students.

### Two Parkinsons

It is interesting that, within the month, two different recordings of Parkinson's Law have been called to our attention. Both are very fine recordings and either or both merit the attention of teachers. In the Academic Recording Institute series on *Politics: The Folklore of Government* this is the introductory title. Others included in the series are "The Political Climate of the Far East," "The Theory of Political Cycles," "Monarchy," "Oligarchy," "Democracy," "Dictatorship," "The Russian Communist Theocracy," "The Phenomenon of War" and "The Bureaucratic Malignancy."

The scholar, author and lecturer, Cyril Northcote Parkinson, is interviewed by a colleague and outstanding teacher, Julian H. Franklin, whose activities are chiefly in the field of comparative government and political theory. Dr. Franklin does not intrude on Professor Parkinson's expounding of ideas but rather deftly

**This man  
can  
demonstrate  
the "new"**

**... right in your own office**

Now, for the first time, you can see and operate a Language Laboratory before you buy.

There is a Switchcraft Distributor in your area who will gladly call and demonstrate this new concept to you.

Switchcraft Language Laboratory Components give you many advantages including:

1. A classroom can be turned into a Language Laboratory in minutes.
2. No permanent installation required.
3. All units especially constructed for classroom use.
4. A system that is low in cost and can be used with your present Tape Recorder or Sound System.

**Developed by Switchcraft — one of the top manufacturers of Quality Electronic components.**

Write or use coupon.

brings to the surface and into focus for the listener the attitudes and information which Professor Parkinson offers.

In addition to the ARI recording on Parkinson's Law there is one of that title offered by Libraphone in their Atheneum series. This is the first recording at 33.3 rpm offered by Libraphone which, to this time, has offered only readings of whole books after the manner of the Library for the Blind and intended fundamentally for the use of handicapped people. The Parkinson Recording (Professor C. Northcote Parkinson Explains Parkinson's Law — Libraphone Athenaeum Number AS-3301 — Libraphone, Box 215, Long Branch, N. J.) is, we hope, the forerunner of a series of such recordings which have broad appeal and potentially wide use in the variety of educational and service institutions gradually adding to their audio libraries. Whereas Professor Parkinson is interviewed in the ARI recording, he speaks in lecture fashion on the Libraphone disc, and consequently is the only voice heard.

If we have not already communicated to you our utter enthusiasm for the Academic Recording Institute recordings, let us say so now and quite openly. The critic is in the happy position of being able to share his enthusiasms with many—and still not lose one whit of ardor for the object of his appraisal. We urge you—all of you—to take pen in hand and secure immediately a copy of the catalog which has been produced by these fine people. Write to Mr. Mack Reed at 3060 Locke Lane, Houston 19, Texas, and ask for the Academic Recording Institute catalog. Study it and select the series which you want to add to your collection—and add them. You'll not be sorry.

Samuel Eliot Morison is another in the stable of eminent speakers at ARI.

We asked Mr. Reed about the popularity of the various series and he told us the Philosophy records seem to be leading in requests, but that doctors generally prefer Montagu. It seems, he told us, that Parkinson is the choice of the business man and that schoolmen on the secondary level lean toward the Morison and Brown recordings. On the college level, the demand seems to be about equal for all five groups.

A final word about Mack Reed's point of view. He says, "I'm prejudiced, but I know these recordings belong in every library—with or without record players—because the discussions stimulate reading, and they make people think." I claim to be without bias in this matter, and I entirely support his point of view. In fact these recordings can be profitably added, without exception, to the libraries of secondary schools, colleges and communities.

So: run, do not walk, to the nearest postbox.

*from Lecture Hall to Language Lab...*

this superb  
new microphone  
adapts perfectly to changing  
teaching  
techniques

A lecture is only as good as it sounds—and how it sounds depends first and foremost on the microphone. In designing the superb new Unidyne III microphone, Shure incorporated every feature that experience shows modern institutions need.

**IT FOCUSES ON THE VOICE.** Unidirectional pick-up pattern (from the front only) suppresses random background noise. Students hear *you*, not shuffling papers, not footsteps, not street noises. Completely controls annoying feedback "squeal!"

**UNPRECEDENTED VERSATILITY.** Unobtrusive size, light weight, instant change from stand to hand, faithful response, extraordinarily rugged design, simplicity and utter reliability combine to make the Shure Unidyne III the most practical institutional microphone ever created.

**SPECIAL LANGUAGE LABORATORY MODEL.** Model 544—Highly and authoritatively recommended for master microphone in language lab. (Shure also makes a lower cost Model "425" "student-proof" microphone for use throughout language laboratory systems.)

*write on your letterhead:*

# FILMSTRIPS

by Irene F. Cypher

An ounce of imagination, a dash of creativity, a sprinkle of fresh viewpoint—oh, what they mean to the production of any picture! And what they can do to raise the level of interest-holding potential for a filmstrip!

It is true that the general range of subject content to be taught remains

fairly well fixed year after year; certain basic information must be conveyed to all pupils as they proceed through their educational careers. This does not mean, however, that the same words must always be repeated when conveying this information; neither does it mean that the same type of

pietorial presentation must be used whenever the subject matter is visualized.

One of the favorite phrases used by everyone when attempting to give advice is, "Get a fresh viewpoint and you will see things more clearly." These sage words should be nailed up on the walls of every filmstrip producer's studio. There is no valid reason why there cannot be some trace of uniqueness, freshness, vividness in the treatment given to subject matter. Today's pupils approach all lessons with a considerable degree of exposure to radio, television, photography. The material presented to them in the classrooms should equal, if not surpass these media in vividness and interest appeal. Let's be willing to get a fresh viewpoint once in a while, and present age-old facts in terms of modern format.

*Christmas Celebrated in Song* (2 filmstrips, 1 record, 2 guides, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$13.50 per set). Here is the account of how many of the songs associated with the Christmas season came to be written. Christmas in Sacred Music relates the stories behind favorite hymns; Christmas in Folk Music does the same thing for favorite carols.

The filmstrips present both the picture story of the song and the words; the records give an excellent musical background for the material. Wherever and whenever consideration is given to music of special seasons, these filmstrips will lend interest because they both present information and allow the viewer to participate in learning, for they encourage the viewer to join in singing the songs. They will be of interest to any age group, and are to be recommended for school groups, choral groups and adult or community programs.

*Every Teacher . . . An Active Political Citizen* (single strip, color; produced by and available from Citizenship Committee, National Education Association, 1201 Sixteenth St., N. W., Washington 6, D. C.; available for cost of postage only for schools and meetings, charge of \$3 if print is kept). Our country was built to provide an opportunity for citizens to take part in and assume responsibility for government. Certainly teachers should set an example in any community for being responsible citizens, willing to take part in local and national affairs, and being informed on political affairs. The subject content of this filmstrip offers suggestions on ways for

**Rugged construction plus ease of handling equals . . .**

Everyone working with audio-visual equipment knows that your best buy is *the best you can buy!* In the case of projection screens, that's Da-Lite . . . a full line of wall-type and tripod models with exclusive features developed over the past 50 years by men who specialize in improved picture projection. \* Trademark

teachers to participate in community affairs, participate in political matters and still remain well balanced, clear-thinking educational leaders. Discussion pamphlets accompany the filmstrip, and it is intended for use with teacher and community groups. This is certainly timely material.

*Explorers of the New World* (6 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$36 per set, \$6 single strips). These are the stories of the contributions made by the Spanish explorers to the settlement and development of the new world. Balboa, Cortes, Pizarro, Coronado, Ponce de Leon and De Soto are the men pictured for us, and the material deals with the expeditions, travels, conquests and work of this group. Maps help to locate the areas reached by the men, and there is considerable biographical information about the leaders themselves. This is social history, designed to show what type of men pioneered in opening up the new world to settlement and what human conditions they encountered in carrying out their tasks. Good, and can be recommended for enjoyable and worthwhile viewing in middle and upper elementary social studies.

*Learning To Look* (6 strips, color, and record; produced by Filmscope, Inc., Box 397, Sierra Madre, California; \$36.50 per set, \$5.50 single strip, \$5.00 single record). There is so much to see in the world around us, if only we know how to look and what to look for. In this series the camera helps us to focus our eyes on Trees, Lumber, Plants, Desert Flowers, Desert Textures, and Desert Soil, Sand and Stone. As our eyes look, our ears help to unfold the story of what we see in design, what forms are to be noticed in natural objects, and what beauty is to be observed in the world around us. This is a refreshingly well planned approach to the problem of stimulating pupils to "see what they are looking at" and to train them for the task of observing and noting details.

The material is certainly well organized for art, nature study and language arts at both the elementary and secondary levels. We need more of this type of filmstrip-record combination for it provides a viewing-listening experience which cannot always be secured first-hand, but which should be made available to all pupils. The title of the series is well chosen, for both picture and record do indeed help in the process of assisting pupils in "learning to Look."

# NEW BONUS RECORDED TAPE

Some of our greatest popular songs — "Full Moon and Empty Arms," "Till the End of Time," "Stranger in Paradise" — took their melodies from the classics. Eight of these lovely themes — in their original classical setting — are the basis for "Classics that Made the Hit Parade."

This unusual program, professionally recorded in sparkling full fidelity on Audiotape, is available RIGHT NOW from Audiotape dealers everywhere. (And only from Audiotape dealers.) Don't pass up this unique opportunity to get a fine recorded tape at a bargain price.

**audiotape**

Manufactured by **AUDIO DEVICES, INC.**  
444 Madison Ave., New York 22, New York  
Offices in Hollywood & Chicago

### DETAILS OF THE PROGRAM

Prokofiev	Polovtsian Dances from Prince Igor (Stranger in Paradise)
Chopin	Symphony No. 5 in E (Moon Love)
Beethoven	Espana Waltz (Hot Diggity)
Chopin	Polonaise No. 6, In Ab Major (Till the End of Time)
Prokofiev	Symphony No. 6 in B (The Story of a Starry Night)
Chopin	Piano Concerto No. 2 in C Minor (Full Moon and Empty Arms)
Chopin	Fantasia Impromptu in C # Minor (I'm Always Chasing Rainbows)
Prokofiev	Romeo and Juliet Overture (Our Love)

### DETAILS OF THE OFFER

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains one 7-inch reel of Audiotape (on 1½-mil acetate base) and the valuable "Classics that Made the Hit Parade" program (professionally re-

corded on Audiotape). For both items, you pay only the price of two reels of Audiotape, plus \$1. And you have your choice of the half-hour two-track stereo program or the 55-minute monaural or four-track stereo versions — all at 7½ ips.

See your Audiotape dealer now!

*The New Administration in Washington* (single strip, black and white; produced by Educational Department, New York Times, Times Square, New York 36, N. Y.; \$2.50 single strip, \$15 for complete monthly series of which this strip is the October, 1960, unit). Whatever the outcome of the current election the new president and new administration will have many domestic and foreign problems to meet. Every new administration faces these problems, and the student of history needs to realize what part is played by

the president himself as compared and contrasted with other branches of the government. This is basically a discussion-news filmstrip, and it serves to provide a basis on which to organize consideration of the form of government under which we live today.

*Understanding Electricity* 7 strips, color; produced by Jam Handy Organization, 2821 E. Grand Boulevard, Detroit 11, Michigan; \$36.50 per set, \$5.75 single strips). It would be hard

to imagine a world without electricity yet all too few of us really understand the nature of electricity and how it is produced. The separate strips of the set go, in detail, into the nature of electricity itself, and also into the ways in which electricity is used in the home. The set is therefore valuable for science and for safety units.

We see how static electricity affects us; experiments are given to illustrate how a generator is developed and how electric magnets differ from other magnets. The strips dealing with use of electricity in the home, and the safety precautions to observe in using electric power are well done and very practical for general use. Basic science concepts are clearly presented and the material is well organized for upper elementary and junior high science units.

**New...for Your Language Laboratory—an Add-a-Unit Tape File**

*Matches and lock-stacks with your Standard Filmstrip Library Plan cabinet*

One new Standard Recording Tape Add-a-Unit drawer file provides a more convenient way to safely file up to eighty-four 5-inch or sixty 7-inch tape reels in original cartons. Problems.

#### Strong Arc Slide Projector

Projects 2" x 2" and 3 1/2" x 4" slides to a size and brilliancy comparable to finest theater projection. High intensity carbon arc lamp enables large screen projection, in difficult-to-darken rooms.

#### Why is CECO the Audio Visual Equipment Center?

Because CECO spans the *entire* complex field. We sell and service every professional type equipment on the market—cameras, projectors, screens, slide projectors, animation equipment, sound recorders, timers, tripods, etc.

More important, we provide *solutions* to problems, no matter how intricate. We charge for the products. We make no charge for our experience. That's why most AV experts come to CECO.

#### Weinberg Watson Analyst Projector

Ideal for teachers, doctors, coaches, for studying recorded data. Continuous variable speed from 2 to 20fps. Single frame advance. Flickerless projection.

SALES • SERVICE • RENTALS

#### Single Frame Eyemo

35mm filmstrip camera with single frame advance mechanism. Reflex viewing and specially designed lens for slide film work.

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to Directory of Sources, page 618. For more information about any of the equipment and materials announced here, use the enclosed reader service postcard.

## NEW EQUIPMENT

### PROJECTORS, Movie, TV

**Auto Load 8mm Projector** offers automatic self-threading film transport system; gear-driven swing-out (400°) reel arms; 100-lumen lamp; loop setter; reverse; power rewind; permanent factory lubricated; 1" f/1.6 lens and carrying case \$119.95; with zoom lens \$139.95. B&H

For more information circle No. 101 on return postal card.

**Magnetic-Optical Sound Projector**, Bolex S-221, speeds variable 16 to 24 ips; overplay feature permits recording one track directly over another without erasing, thus building and testing a complete cumulative sound track right on film at either sound or

Bell & Howell "Explorer" Projector

second automatic timer; safety-lock editing device; 500-watt; 4" f/3.5 lens; \$119.95. With built-in remote control pointer-ray \$179.95; with 3½" to 4½" zoom lens, add \$30. B&H

For more information circle No. 103 on return postal card.

**6,000 lumen Slide Projector**— improved optics reportedly give 50 per cent increase in light output from Genarco's new model SM 3. New special lenses and other accessories also announced in new A-V catalog. SM-3 with roto single-slide holder \$1,030; with manual slide-changer \$1,084; with electric 70-slide changer \$1,398. GENARCO

For more information circle No. 104 on return postal card.

### LANGUAGE LAB

**Portable Tape Recorder**, suited to language lab use. Records half-track; 3-speed 1½ to 7½ ips; two built-in speakers and output jack for external speaker; footage counter; 7" reel; wt less than 25 lb; 8½x14½x16"; \$179.50. RCA

For more information circle No. 105 on return postal card.

**Laboratory FM Tuner Kit** comes with front end pre-assembled, sockets etc pre-mounted; full color instruction

Scott "Kit-Pak"

book mounted in cover, designed for student and hobbyist. The first from this source. \$89.95. SCOTT.

For more information circle No. 106 on return postal card.

**Mobile Lang-Lab** Wheeled cabinet houses tape recorder, teacher controls and eight individual amplifiers and student position connections. Students hear own voices in comparison with recorded master. 8-watt amplifier, 10" speaker; AC power line for projector connection. Serves also as movable P.A. system. Complete with mikes, headphones, for 8 students and teacher. \$750. MOBILE-TRONICS

For more information circle No. 107 on return postal card.

### SOUND EQMPT.—& Accessories

**"Crown-o-Matic"** A-51 monaural tape player, designed for heavy-duty continuous operation in music systems, plays up to 16 hours unrepeatable time at 3¾ ips, 8hr at 7½; 1¾ips on special order; suitable for 19" rack mounting, 42 lb., \$695. INTERAD.

For more information circle No. 108 on return postal card.

**Dynamic cardioid microphone**, made in Austria, offers base attenuation switch that cuts 8 db at 200 cycles when needed. Built-in folding table stand. Under \$30. ELECTAP

For more information circle No. 109 on return postal card.

**Four New Microphones** in Astatic 330 series. Model 335H dynamic, high impedance, 50-12,000 cps; lavalier and stand adaptor, on-off switch, \$26.50. Model 335L, same specs, low impedance; \$23.50. Model 333, ceramic, high impedance, 30-12,000 cps; \$17.90. Model 331, ceramic, high impedance, 300-5,000 cps, built-in momentary-on switch, \$17.90, for communications and 25 mc citizen's band use. ASTATIC

For more information circle No. 110 on return postal card.

**4-Channel "Add-A-Track" Recorder** permits user to record on one track, rewind and record on the second channel while listening to what he has put on the first, and then play back both simultaneously. The master channels are non-erasable by the student. Especially recommended for language drill and music practice, all four tracks play monophonically and will also play stereo tapes. \$225. Auxiliary amplifier-speaker Model 166 \$75. V-M.

For more information circle No. 111 on return postal card.

**"Lyceum" Classroom TV**, 21", high grade chassis, 20 kw high voltage supply reportedly gives 25% brighter picture, glare minimized by tinted glass and built-in light shield. Pre-set fine tuning and stay-set volume control; lock door over controls; two 8" speakers front mounted to the two sides and close in front of set when not in use. 5'0" above floor. RCA

For more information circle No. 112 on return postal card.

Bolex 16mm Projector

silent speed; 15-watt amplifier; built-in mixer permits playing outside sound source simultaneously with that on film; adjustable scanning beam; 2000 foot capacity; built-in stroboscope; with 8" speaker in lid, microphone, earphone, and cover \$1250. BOLEX.

For more information circle No. 102 on return postal card.

### PROJECTORS, Still

**Focus-Tronic Slide Projector** provides remote control focus as well as advance and repeat; built-in 3 to 30

**Something Worth Looking Into . . .**

**AUDI-VIEWER SOLVES YOUR FILM PROJECTION PROBLEMS WITH ONE COMPACT, EASY-TO-OPERATE UNIT!**

Yes, Audi-Viewer is worth looking into. It will revolutionize your film-viewing program. Now you can show films in any lighted room through the magic of rear-projection viewing. Students **stay** in their classrooms! Windows are **open** for ventilation; There is **light** for note-taking! Supervision is **easy!**

Developed by teachers to fill a long-felt need in the field of film presentation, the Audi-Viewer will more than please you.

You can put an Audi-Viewer to work for you right away by contacting your nearest dealer or writing to us directly.  
**SARASOTA AUDIO-VISUAL CORP.**  
P.O. Box 3637 Sarasota, Fla.

**MISCELLANEOUS EQUIP.**

**Exposure Control Cap for Polaroid "3000"** in daylight, has tiny aperture which cuts the stop to approximately f:90 and the film speed to ASA 200. Sharp pictures from 4 ft. to infinity. \$1.50 TIFFEN

For more information circle No. 113 on return postal card.

**Zoom Stereoscope.** Two rhomboidal prisms permit dual image viewing, one superimposed precisely over the other; continuous (zoom) variable magnification from 0.7x through 3.0x;

Bausch & Lomb "Zoom 70"

no loss of focus or image blackout between changes; base is combination stage and light box; eye pieces adjustable; \$750. Various accessories available, B&L.

For more information circle No. 114 on return postal card.

**Flo-Tronic Copier 300** Desktop copier that reportedly combines convenience of dry-type machine with photographic accuracy of solution type. CORMAC

For more information circle No. 115 on return postal card.

**"Sun Gun" Movie Light,** a single halogen lamp in a 2¾ inch reflector, is reported to give as much light as 1 conventional 18" light bar with four R-30 photofloods. Draws 650 watts; color temperature, 3400 Kelvin, sun Type A Kodachrome without a filter as well as black and white. \$24.95; placement lamps \$7.98. SYLVANIA

For more information circle No. 116 on return postal card.

**Portable Darkroom** features "Unibat" single solution developer-fixing tank (means of a changing bag), fixed tank and removal in daylight. "Unibat" speeds drying. Other solutions available, all in unbreakable plastic bottles. Handsome packaging of kits. CORMAC.

For more information circle No. 117 on return postal card.

**Project-O-Stand,** cast aluminum platform 11x19", with legs adjustable 24" to 41" \$37.88; 32" to 56" \$39.75. SAFETY LOCK

For more information circle No. 118 on return postal card.

**Publications Display Rack,** 28"x54", 18" depth or fastened to wall; shows entire face of 22 books, or 110 publications stacked 4-6 deep. Wt 12 lb. \$15.95. BILLERETT.

For more information circle No. 119 on return postal card.

**Sound Tape Filing Cabinet,** capacity 100 reels; 19½x16x17"; lock-stacks with other record, filmstrip and film cabinets in this maker's extensive line \$49.50. BRADFORD.

For more information circle No. 120 on return postal card.

**Trans-Scan** televises transparencies from remote receivers without employing camera. 36"x39½"x50" high, including 14" built-in monitor. CCCA.

For more information circle No. 121 on return postal card.

**Educational Television Guidebook**

By Philip Lewis, Board of Education, Chicago

Ready in January, 1961

This guidebook presents, in a single compilation, data and information covering the field of educational and instructional television, particularly from the systems, equipment, and educational applications point of view. This is the first book to approach this neglected area in television development. For pre-service preparation of new teachers; in-service orientation of administrators, supervisors, and teachers; curriculum specialists; and can be used as a general source-book for teachers.

There is something  
**NEW.**  
under the sun!

**A new screen for viewing pictures in undarkened rooms**

It is true that you can project better pictures in darkened rooms—but there are many times when room darkening is inconvenient, difficult and costly. Now, with the new Radiant exclusive "truly lenticular" screen, which controls both horizontal and vertical light reflection, you can project slides and movies effectively in normally or partially lighted rooms where no unusual lighting conditions prevail. For schools—this enables viewers to take notes during showings, minimizes inattention and misbehavior, and permits simultaneous use of collateral material.

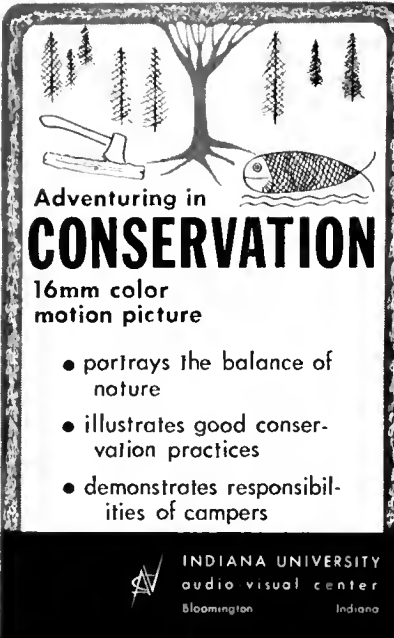

Send for Illustrated Booklet which gives the complete explanation of this new truly lenticular screen, also catalog giving specifications and prices of Radiant's complete line of lenticular and glass-beaded screens of every type for every purpose.

# Special Offer FROM 3M

for language instructors!

**An exclusive taped report by leading educators who tell first-hand how tape recording helps them teach languages**

Now, a special tape recording. "First the Ear . . .", tells the exciting success story of the use of magnetic tape in today's language classrooms! With this new 30-minute tape from 3M Company, you hear first-hand accounts from instructors who now use tape to win keen student interest, enthusiasm *and concentration* . . . in both modern and classical languages, both beginning and advanced courses.

Whether you have a language laboratory, as shown at left, or simply use portable tape recorders, you'll find many valuable teaching ideas by listening to this new tape. For example, it tells how students become more proficient by hearing many native voices and accents . . . tells how both you and your students can better evaluate individual achievement . . . tells how you can pre-record practice drills, then spend more time making corrections and working with individual students.

"First the Ear . . .", prepared for professional educators with the counsel and participation of leading language instructors, is available to you for only \$1.50. Just return the coupon below to 3M Company . . . manufacturers of professional-quality "SCOTCH" BRAND Tapes, famous for perfect sound reproduction and available in a variety of types to meet all recording requirements.

**MINNESOTA MINING AND MANUFACTURING COMPANY**

# YOURS FOR THE ASKING!

Tecnifax Corporation is continuously developing in its Visucom Laboratories new and interesting techniques for using the "overhead" projector. Training in these techniques is available to you, without charge for materials, facilities or instruction, through the following services:

**SEMI-ANNUAL SEMINAR-WORKSHOPS** . . . at these hard-working, three-day seminar-workshops, over 500 attendees acquire information, exchange ideas, and use new visual techniques to solve communication problems . . . 16 held to date.

**VISUCOM PROGRAM** . . . this continuing training program provides first-hand experience in the preparation of "overhead" projectuals . . . five-day course . . . small classes . . . facilities for working out specific projects.

**TECNIFAX LITERATURE** . . . a series of brochures published by Tecnifax to provide useful and interesting information for workers in the field of visual communication.

FOR ADDITIONAL INFORMATION, call or write Tecnifax Corporation, Holyoke, Massachusetts.

Tecnifax equipment and materials are approved for purchase under the National Defense Education Act.

**BRANCH WORKSHOPS** . . . projectual-making workshops are also conducted at Tecnifax' twenty-six sales branches . . . registrations are accepted for groups or individuals.

**"Nous sommes en train d'étudier le français élémentaire."**

"We are studying elementary French."

**"Nous étudions le français intermédiaire."**

"We're working on intermediate French."

**"Ce système-ci nous permet d'apprendre d'autant plus rapidement, nous suivons des cours de français plus avancés."**

"This system enables us to learn so much faster, we are taking more advanced French lessons."

**"Nous avons manqué la classe hier et nous rattrapons les leçons que nous avons manquées."**

"We were absent yesterday and are making up the lessons we missed."

**"Hacemos tareas en español durante nuestro período de estudios."**

"We're working on Spanish assignments during our study period."

**One classroom...one console...five different activities!**

## EDWARDS LANGUAGE LABORATORY

In this typical classroom situation, one 30-position, 2-channel Edwards Language Laboratory serves five simultaneous activities (4-channel models available when required). 13 beginners work on a master lesson using Lesson Channel 1. Nine intermediate students work on a second lesson using Channel 2. Three more advanced students work with tapes saved from an advanced class, recording their responses while erasing old practice material recorded by previous students. Three absentees make up work on tapes saved from a previous lesson. Two students use a free period for some independent lab work. The language laboratory is utilized to the fullest extent. Any number of separate lesson activities or subjects may be handled. The instructor has complete control over all 30 booths and can monitor or communicate with any student at any time. The instructor can utilize the Edwards

Language Laboratory's extreme flexibility to include visual presentations, channeling sound for films, slides, TV, etc. through the lesson channel's auxiliary input. He can use the function selector's RECITE position to channel the recitation of one student (or a conversation between himself and one student) to the rest of the group. The instructor may pick up any student tape he desires to check, or to hold as a master tape for later use. There are many language laboratories, but only Edwards offers such versatility and ease. Write today for detailed literature on this more effective teaching tool for

creative language instruction. EDUCATIONAL EQUIPMENT DIVISION: Edwards Company, Inc. Dept. A-10. Norwalk, Connecticut; Edwards of Canada, Limited, Owen Sound, Ontario. Better Language Instruction, For More Students, The Most Effective Way. © 1960 EDWARDS COMPANY, INC.

## ALA Exhibit At 1962 Fair Will Include AV Equipment

Receipt of a \$30,991 grant to the American Library Association from the Council on Library Resources, Inc., Washington, D. C., for use in planning a "Library of the Future" exhibit at the forthcoming Century 21 Exposition in Seattle has been announced by David H. Clift, executive director of the ALA.

The Century 21 Exposition, first international exposition to be held in the United States since 1939, will be held from April 21 to October 21, 1962. The new grant, which is in addition to a \$2,000 grant this past May from the Council on Library Resources for a feasibility study, will be used to develop plans for participation by the ALA in the Exposition.

The ALA exhibit, as envisaged, will display in a library environment random access data processing machines, film storage and retrieval machines, audiovisual devices, teaching machines, film viewers and printers, communication devices including distant television transmission, and machine translators. The exhibit will indicate what the technical proficiency of the machines can contribute.

## Education Groups Plan Two European Tours in 1961

Two trips abroad will be made during the summer of 1961 under auspices of the Comparative Education Society and Phi Delta Kappa's Commission on International Education. One, June 18-July 22, covers Denmark, Sweden, Finland, the Soviet Union, Poland and Czechoslovakia. The second, Aug. 13-Sept. 16, includes Denmark, Holland, Germany and Belgium. In charge of arrangements is Gerald H. Read, Kent State University, Kent, Ohio.

## FCC Permits ETV To Use Microwave Facilities

The Federal Communications Commission, in an important decision, has responded to NAEB's petition to grant an exception in behalf of educational broadcasters regarding the use of microwave facilities for inter-city TV relays. The significance of this decision is that now education can establish its own microwave facilities to link educational TV systems in widely separated communities, rather than resorting to common carriers. The rul-

ing, which excepted non-commercial educational users only, should have profound influence in development of state and regional ETV networks and closed circuit systems.

## Keynoters Mark AV Trends At Texas AV Meeting

Dr. Chester Babcock, executive director, division of instruction and curriculum, Seattle Public Schools, delivered the keynote address when the Texas Audio-Visual Education Association held its ninth annual meeting October 30 through November 1 at the Windsor Hotel in Abilene.

Participating in a panel discussion on the keynote address were a curriculum director, audiovisual specialists on public school and college levels, a school librarian, a superintendent and an educational psychologist.

Moderated by Dr. Harold E. Wigen, director of audiovisual education of the Houston Independent School District, these were Miss Susan Crutchfield, director of curriculum of the Galveston Public Schools; Wiley

Angelo; and Weldon Barnett of Abilene.

Subject of the keynote address, as well as other aspects of the program, were in line with the conference theme: "TEXAVED Looks Ahead: The Impact of New Technological Developments on Curriculum and Teaching and the Uses of Instructional Resources."

## Utah State Univ. Will Produce Taped Lessons

A television studio at Utah State University is being equipped to turn out tape recorded courses for broadcast to the student body and the home viewer.

A major benefit of the on-campus tape recording operation, according to university president Daryl Chase, will be elimination of the twice-a-week treks taken since 1954 by Utah State faculty members 80 miles over the mountains from the University at Logan to the nearest television transmitters in Salt Lake City.

"Frequently truck-loads of special equipment, laboratory animals and experimental devices have accompanied the instructors and production group on the 160-mile round trip, even in rugged weather," Chase said. "With our new studio equipment we will be able to produce material here and mail the finished tapes to both commercial and education television stations in Salt Lake."

The studio is being equipped by RCA.

## EFLA Board Elects Officers, Plans New Membership Drive

The Educational Film Library Association reports that its new president, elected for a one-year term, is Frederic A. Krahn, assistant director of the East Meadow Public Library, Long Island, New York.

Re-elected as vice president is Galon Miller, director of audio-visual education of the School City of South Bend, Indiana, who will also serve as chairman of EFLA's membership committee. New secretary is Iola B. Tryon, director of the film department of the Russell Library, Middletown, Connecticut. Together with administrative director Emily S. Jones, these officers will serve as the association's executive committee.

EFLA's general membership of over

TRADE MARK

**“We saw how practical a teacher can be about A-V aids before we selected this Kodak Pageant Projector.”**

*Says John M. Chilcoat,*

Principal at the new Norwood Elementary School, Baltimore County, Md., selected by A.A.S.A. for its exhibit of outstanding school designs:

“From our teachers’ point of view, classroom order and pupil attention are basic requisites before any learning can take place.

“A-V aids, they feel, must contribute to the entire learning experience—should not disrupt order, nor distract attention. When attention is held, the learning process is quickened, the subject more thoroughly understood.

“Our teachers expressed themselves on these matters when we were examining projectors. Then they selected the Kodak Pageant Projector as their practical choice.

Easy to set up, the Pageant meant programs started promptly. Quiet, the Pageant didn’t distract students by machine noise.”

Because reel arms, belts and cords are all permanently attached in place, the Pageant sets up easily. Operation is so simple that many teachers leave it entirely to the children.

To see a demonstration of the Kodak Pageant’s brilliant screen image, its high quality sound, and its other practical features, call a nearby Kodak A-V dealer. Or, write for Pageant Bulletin V3-22. No obligation, of course.

*Kodak Pageant Projector* } **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

DR. IRENE CYPHER, Associate Professor of Education at New York University, past-President of the METROPOLITAN AUDIO VISUAL ASSOCIATION, and A-V Editor of INSTRUCTOR Magazine, demonstrates the unique advantages of the NORELCO 'Continental' Tape Recorder to a group of student teachers at N.Y.U. Selection of the NORELCO for inclusion in the exhibits in N.Y.U.'s "Model Classroom" was based upon performance standards of fidelity, reliability, versatility and functional simplicity.

Now **Norelco**® adds the **CONTINENTAL '300'** to their line of Tape Recorders designed for the classroom

**NEW!** The Norelco **CONTINENTAL '300'**  
4-Track Stereo Playback, Monophonic Record-Playback • Completely self-contained, including wide-range Norelco speaker and dynamic microphone • 3 speeds • Monitoring facilities for 'listening in' on student • Rugged construction for constant classroom use • Mixing facilities • Built-in accidental erasure prevention.

**NEW!** The Norelco **CONTINENTAL '400'**  
4-Track Stereo Record-Playback, Monophonic Record-Playback • Completely self-contained, including two Norelco speakers and dual-element dynamic stereo microphone!

**Write for illustrated and detailed brochure.**

MRS. MARY LOU PLUGGE, Chairman of the DEPARTMENT OF SPEECH AND DRAMATIC ARTS AT ADELPHI COLLEGE in New York, finds her NORELCO 'Continental' tape recorder an essential tool in speech instruction. Says MRS. PLUGGE, "My NORELCO tape recorder is valuable to me for a number of reasons. There is an impressive tone quality in its reproduction of sound. Concomitant with this is the aid of the mechanical pause button which allows me to stop to analyze progress without turning off the machine." The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S12, 230 Duffy Avenue, Hicksville, Long Island, New York.

600 major institutions and organizations recently re-elected President Krahn for a second three-year term as a director. Also re-elected was Erwin C. Welke, director of audiovisual extension at the University of Minnesota; and a new member of EFLA's board is Donald Smith, director of audiovisual education of the Kansas City Public Schools.

Reporting EFLA's program for the new year, Krahn emphasized plans for expansion of the third annual American Film Festival, to be sponsored again by EFLA April 19-22 at the Barbizon-Plaza Hotel in New York City.

### Univ. of Colorado Named Tape Duplication Center

The University of Colorado has been designated a major tape duplication center for modern language institutes throughout the nation.

Dr. Robert E. de Kieffer, director of the Bureau of Audio-Visual Instruction, said his office has begun reproducing foreign language tapes as of Sept. 1. The purpose behind the program is to provide teachers who have attended the modern language institutes with tapes to aid them in their classroom work.

De Kieffer said his office will produce complete sets of tapes in Russian, Spanish, German, Italian and French. There are 45 to 65 tapes in each set.

### Video Tape Exchange Plan For Practicing Physicians

The Council on Medical Television, with the aid of a grant from Eli Lilly & Company, will initiate a project intended to develop and expand the use of standard broadcast television as a means of supplementing the continuing education of the nation's practicing physicians.

During the first phase of this project, each of three medical schools will prepare a "course" consisting of four half-hour segments, or "cores," recorded on video tape. A syllabus, containing self-testing material to supplement each televised presentation, will be prepared also. These courses will be designed primarily for the general practitioner. Production, distribution and transmission will be handled by the National Educational Television and Radio Center (NET) and its affiliated stations. The cores will carry an acknowledgement to the pharma-

ceutical sponsor but no product advertising.

After each school has shown its own course in its local area, an exchange of tapes will begin—ending after each school has had an opportunity to show all three courses.

## Oklahomans Hear Discussion On Audiovisual Matters

Those attending the fall meeting of the Audiovisual Coordinators of Oklahoma at Oklahoma City, October 28, heard a panel discussion among educators and AV specialists from the state's colleges and secondary schools and from the state department of education.

Up for discussion were the following topics: qualified coordinators, allocation of time, acquisition of materials, distribution of equipment and materials, proficiency of teachers.

**STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 3, 1933, AND JULY 2, 1946 (Title 39, United States Code, Section 233) SHOWING THE OWNERSHIP, MANAGEMENT, AND CIRCULATION OF Educational Screen & Audiovisual Guide published Monthly at Louisville, Kentucky, for October 1, 1960.**

1. The names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher, H. S. Gillette, 2052 N. Lincoln Park West, Chicago, Ill.; Editor, Paul C. Reed, 116 Crosman Terrace, Rochester, N. Y.; Managing editor, James R. Cummings, 2052 N. Lincoln Park West, Chicago, Ill.; Business manager, Thea H. Bowden, 2052 N. Lincoln Park West, Chicago, Ill.

2. The owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a partnership or other unincorporated firm, its name and address, as well as that of each individual member, must be given.) Educational Screen, Inc., 2052 N. Lincoln Park West, Chicago, Ill.; H. S. Gillette, President, 2052 N. Lincoln Park West, Chicago, Ill.

3. The known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages, or other securities are: H. S. Gillette, 2052 N. Lincoln Park West, Chicago, Ill.; Marie C. Greene, 5836 S. Stony Island Ave., Chicago, Ill.; Paul C. Reed, 116 Crosman Terrace, Rochester 20, N. Y.; M. J. Sturdy, 4115 S. Packers, Chicago, Ill.; Patrick A. Philippl, 1669 Timberland Road, N. E., Atlanta, Ga.; June Hehrlich, 219-C S. Maple Ave., Oak Park, Ill.

4. Paragraphs 2 and 3 include, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting; also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner.

5. The average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the 12 months preceding the date shown above was: 6500.

# ALL NEW FROM AMPEX

*In sound quality, in operating principle and in features, this is the compact professional recorder that will set the standards for all others. New in every detail and Ampex throughout, the PR-10 is all you expect of the name. It is a worthy companion of the big Ampex recorders that make the master tapes of nearly all the recorded performances sold in the world today. To a heritage of excellence, the PR-10 adds the completely new electrodynamic frictionless tape handling system that makes possible studio-quality performance in a compact machine. Your dealer has it. See it operate soon.*

**FEATURES AND ESSENTIAL DATA** PR-10-2 stereo/monophonic model records and plays back stereophonic, monophonic, sound-on-sound, cue-track, selective track and mixed or unmixed two-microphone sound • PR-10-1 monophonic available full track or half track • Pushbutton controls of professional relay/solenoid type • Full remote control provisions and accessory remote unit • New automatic 2-second threading accessory, optional • All new compact electronics • Professional monitoring includes A-B switches, VU meters, phone jacks and output circuits • Separate erase, record and play heads • 4-track stereo playback optional on open fourth head position • Two speeds with options: 15 and 7½ ips or 7½ and 3½ ips • Hysteresis synchronous motor • Electrodynamic tape handling for lowest flutter ever in a portable/compact recorder • Plug-in modules for flexibility of equalization and input characteristics • Portable or rack mount • Dimensions for both models: 19" w by 14" h permitting easy replacement of many older rack recorders.

## PR-10

To the Editor:

I thought you would be interested in the letter we got from Dr. A. Perlberg of the Department of General Studies, Israel Institute of Technology in Haifa, Israel. The letter is self-explanatory, but I thought it would be of interest to you to know how wide your readership is and the way they follow through on the things that they read in *Educational Screen*.

We saw that the information which he requested was sent to him.

Keep up your good work; you're making a real contribution to this field.

Very truly yours,

W. D. Brumbaugh, Director  
Audio Visual Bureau  
University of Utah.

To the Editor:

The All-Soviet National Library of Foreign Literature is the central repository of foreign literature in the Soviet Union. In its collections there are more than 2,500,000 copies of all branches of knowledge.

One of the sources of acquisition of literature into the library is the international book exchange which is conducted with 625 libraries, scientific foundations, publishing houses and other organizations in 57 countries.

We are very much interested in the broadening of exchange of publications with organizations of your country and will be glad if you are agreed to sending to our library the journal you publish, "*Educational Screen*," in exchange for Soviet periodical publications that you need.

In the event of your agreement, we ask that you let us know what publications you would like to receive

The fourth annual Industrial Film and AV Exhibition, held in New York City October 10-13, drew broad attendance from government, industry and education. One of the hits of the show was this "Audiovisual Executive Desk" containing dictating machine, tape recorder, slide projector, screen, typewriter, electric rotary file, photocopy machine, stereo hi-fi, TV, even a bar, safe and bed.

Two Ed Screen and AV Guide editors participated as panel members at one of the general meetings. They are Dr. Irene F. Cypher, associate professor of education at New York University, and Dr. Max U. Bilderee, president of Audio Cardalog—second and third from left. Panel member at left is David Landman, assistant director, division of adult education, Cooper Union, and Miss Temima Gezari, art instructor at Jewish Theological Seminary.

ВСОЮЗНАЯ ГОСУДАРСТВЕННАЯ Библиотечная Ассоциация Институты Москва, М-12, ул. Рязань, 12

№ 122/4

Г-ну редактору журнала "Эдукационал Скрин", Вашингтон, Колумбия, США

Уважаемый господин редактор,

Наша государственная библиотека иностранной литературы является крупнейшей библиотекой в Советском Союзе, а ее состав образуют более двух с половиной миллионов иностранных книг и периодических изданий по всем отраслям знания.

Одна из основных источников литературы в библиотеку является международный книгообмен, который ведется с 625 библиотечными, научными учреждениями, академиями и другими организациями в 57 странах.

Мы крайне заинтересованы в расширении обмена изданиями с организациями Вашей страны и будем рады, если Вы согласитесь послать нам в обмен на издание "Эдукационал Скрин" журнал "Эдукационал Скрин" и список на будущее.

В случае Вашего согласия прошу сообщить, какому изданию Вы хотели бы послать в обмен библиотеке в соответствующий срок.

Наш адрес: СССР, Москва, М-12, ул. Рязань, 12

С уважением,  
Директор  
Маргарита Рудомино

from our library in the exchange arrangement.

Our address is: 12 Razin Street, Moscow K-12, USSR.

Sincerely,

/S/ Margareta Rudomino  
Director

To the Editor:

My thanks for drawing to my attention an error in the statistics in the books and periodical publications in article entitled "Saskatchewan's Vis-Ed Branch." There was a typing error

in the manuscript regarding the total number of pupils attending secondary schools. The 400,000 pupils should read 40,000. I have had inquiries about this from different people across Canada and have made the correction.

Sorry that this error had to creep in. Best regards.

Sincerely,

E. F. Holliday,  
Supervisor,  
Visual Education Branch,  
Department of Education  
Regina, Saskatchewan

# NEWCOMB

## pronunciator

MODEL AV-LSV

*a new, compact, portable, economical language trainer*

The Newcomb Pronunciator is a four-speed, variable-speed, compact phonograph with an earphone-microphone headset. It is designed primarily as a pronunciation comparator in foreign language teaching, but it will undoubtedly find many additional applications in libraries, laboratories, reading rooms, and other classrooms. The Pronunciator is an efficient teaching tool for pupils of all ages. When the student repeats a word into the microphone, he hears exactly how his voice sounds to others as well as how closely his pronunciation approximates that of the recorded voice. Circuit of vocal sound through microphone-amplifier-headphones in effect bypasses hearing through bone conduction—the usual means of subjective perception—and gives an accurate, objective representation of how the student's voice really sounds. There are separate volume controls for phono and microphone. The Pronunciator is equipped with the Newcomb Acra-Set tone arm lifter. This permits, with the turn of a knob, introduction of a pause between words and simplifies repetition of a passage. It also

protects the record. The Pronunciator capitalizes on the advantages inherent in disc recordings—ready availability, low cost, and ease of operation. Virtually all students are already familiar with phonographs and will know how to operate the Pronunciator with only a minimum of instruction. Not only is the acquisition cost low, but the Pronunciator requires no architectural modification or expensive construction. Yet it is surprisingly versatile, has an input jack for audio signals from a tape recorder, radio, or teacher's amplifier, also has an output jack to teacher's monitor and an a.c. outlet for film projector. It requires little maintenance, is as ruggedly built and dependable as all Newcomb Audio equipment. It weighs just 12½ pounds, can be easily carried from one room to another or taken home for special assignments. It takes up little room in storage—measures 6¾" x 9¾" x 14¾". It plays any size record up to 12". Write for your free copy of Bulletin AV-11 which describes the Pronunciator in detail. Handy bid specifications are also available to qualified personnel.

## Innovationism

Paul C. Reed

Traditionally the year's end is a time for inventory and stock taking. In our field it's a time when we can count all the countable things we've done for the past year. We can count the new AV equipment acquired. We can count the AV materials circulated and used. We can count money spent and money saved. We can also count the existing needs and use this as a basis for new budgets and new plans for the coming year.

Year's end is also a time for introspection. A time when even normally extroverted people can take a good look at themselves and try to answer such questions as "How 'm I doing?" and "Where 'm I going?" What better time than this, then, at the end of 1960, for audiovisual people to take an introspective peek at their own roles?

Throughout this past year, from all sides, we have heard of the challenging and almost fantastic promises of the coming decade. It's an unbelievable technological age we're moving into, they say. In the next ten years we can expect greater advances than in the past forty. The implications of known technological development for changes in education and educational methods are already staggering to normally stable educators. But new breeds of educators are rising up to meet these challenges, and organizational shifts are being made to accommodate them.

There's a "re-tooling" going on in some educational circles that's more than the building of new schools and the purchase of new equipment. It's a change of attitude, a break away from assuming that it has to take a generation for a new idea to become accepted practice in education.

Dr. Walter Crewson, dynamic associate commissioner of New York's State Education Department, urged New York's superintendents to get set to experiment:

*"We all know the roadblocks by heart. But you—are you finding orderly means of challenging old practices? Have you appointed a vice president in charge of educational heresy? Do you look hard at a new idea, or do you discard it without a glance? Sometimes I wish we were all a little less sophisticated in the art of educating. Then we wouldn't be so wise in all the rationalizations against the new and unproven. The Department is tooling up for a real journey into the unknown. Will you join us?"*

When I first read these words from Dr. Crewson, I scribbled on the margin, "This is really what AV leadership is all about!" And that it is. All these years the true audiovisual leaders *have been* the unappointed "vice presidents in charge of educational heresy." They've been the discoverers of the new for education and have been the ones who have proved the values of the unproven. They have led pioneering teachers on journeys into the unknown. Lantern slides, stereographs, motion pictures, radio, sound pictures, tape recording, language laboratories, television, learning machines, all have been journeys into the unknown.

This, then, is becoming the more clearly defined role for audiovisualists as we move forward to meet the technological challenges of the sixties. Audiovisual administrators must become far more concerned with innovation than with administration.

New products of technology from all fields must be examined with critical imagination to discover their applications to education. The promising must be applied creatively to the solution of educational problems. The unproved must become tested and proved. Then, finally, the new proved tools must be promoted and put to work in the increasingly complex tasks of educating the uneducated.

Educational innovation is the new primary role of audiovisual leadership. Audiovisualists should become innovationists.

Front 1961

An "Ed Screen" Staff Report

**T**HE year 1960 marks the close of an exciting decade of growth and the opening of a new decade that promises to be even more lively. The final curtain call of the 50's was well summarized by NAVA president W. G. Kirtley in the August convention issue of *Educational Screen and Audiovisual Guide*, when he also pointed to "the certainty that by 1970 we will be using wonderful, yet undreamed of audiovisuals."

Many new resources of today and tomorrow have been publicized in our pages during the past 12 issues. The editorial of the convention issue dealt with one of them: the 8mm sound motion picture . . . . .

"Here's a new communications tool. A real audiovisual challenge for the Sixties. What are people saying about it? What do you think? How are you going to find your answer? Or is your mind already made up?"

With big guns like Eastman and Fairchild making 8mm sound projectors, and at least two sources of 8mm (entertainment) sound films, this medium has definitely arrived.

There were three 8mm sound-on-film projectors on display in the 1960 NAVA trade show, along with one single system camera for shooting 8mm talkies. Many other relatively new items were there also—language labs, technamation, teleprompters, vidicon just-plug-it-in cameras, teaching machines, wireless intercom for language lab use, special receivers for stratovision reception, etc. And just beyond the 1960 show were such promises as sound-on-filmstrip, color videotape, thermonuclear recording, and culture storage and problem solving computers.

A similar display of technological advance was seen at the DAVI convention five months earlier. Fourteen language lab manufacturers vied for the attention of the visiting AV professionals with nine producers of language-teaching material, eleven makers of tape recorders, nine record players and eight teaching machines.

Ever since the first magic lantern was set to instructional use, the "newest" has always drawn the biggest house. Our Audio department editor "Pat" Bildersee wrote of this in reporting the Cincinnati show:

"But the really busy exhibitors were showing teaching machines. These were simple machines, some of them, which required the skills of reading, writing and pushing buttons. Others were highly complex electronic equipment that even timed the responses and scored the student accordingly. But, as in the case of the language laboratories not too long ago, there was an admitted need for more and still more program material for the teaching machines. Just as each new complex machine comes into the market there is demonstrated again the need not only for equipment but also for adequate and superior materials. Machines are lasting, materials are used and gone insofar as the individual student is concerned, and the new materials must be supplied all the time."

While the educational psychology theorists are far from certain as to the sequence or format of these teaching machine "programs" (don't say "instructional materials"! ) film producers and textbook publishers (including their American Institute of Graphic Arts) have jumped into this field without qualm. "Programs" in arithmetic, grammar and other conformist skill areas are promised for next fall by Encyclopaedia Britannica Films—and in two versions, too, so that they may be sold either with or without "machines." McGraw-Hill has named Godfrey Elliott head of a special department to serve this field, and Coronet's tie-in with Kalart's sound-on-filmstrip may provide the best current means of audiovisualizing what until now has been primarily a verbal drill device. There are plenty of manufacturers to make these machines and audiovisual dealers to demonstrate and sell all that the schools will take. They have been doing this for a long time; one of the first of these firms, Victor Animatograph Corporation, is observing its 50th anniversary this year.

As with every innovation in teaching tools and techniques, there are blocks in the path of broad and speedy acceptance. The first, probably much exaggerated, is the alleged reluctance of classroom teachers to change their teaching patterns from those by which they themselves were taught. There is not likely to be as much resistance to a simple tin-boxed, self-scoring workbook as there was to the relatively complicated motion picture projector or tape recorder.

A more insidious obstacle may result from extreme, immoderate claims for innovations by their protagonists. Few math teachers, however progressive, would be attracted by the claim that the full four-year math course can be mastered

via machine in one year of night school. Nor by the boast that "in ten years there will be no more teaching by people," made by a psychology professor spending \$49,000 for machines to teach his 100 pupils. Such statements recall the Edisonian dicta of a half-century ago that educational motion pictures would displace both teachers and books.

This over-pressing attitude is reflected in theoretical discussions among AV professionals in a lofty dismissal of all past progress as "pre-technological." The projection of picture and/or sound was as potent a manifestation of technology as is airborne videotape or the digital computer today. Only those improvements which proved satisfactorily applicable to educational purposes were absorbed by the education of their day. The new developments will similarly be absorbed in ours.

The educator may well be wary, however, of a possible monopoly of mass communication if nationwide stratovision were tied into uniform compulsory testing machine scores, electronically graded for conformity to pre-set patterns of thought. He may look askance, too, at the new philosophy that explains human thought by analogy to the workings of machinery supposed to approximate human thinking—a philosophy which dreams up apparatus that proves only that man's senses can be fooled.

But there are many other technological developments that are sure to strengthen rather than further atomize the group culture so basic to democratic society. For instance, a double-8 sound projector, running 90 minutes of feature film encased in a dust-proof, no-rewind magazine, was demonstrated at the 1960 meeting of the Society of Motion Picture and TV Engineers. A somewhat similar 20-minute endless loop projector has reportedly been developed under the auspices of the MIT physical science study committee. Also seen at NAVA was a radical redesign of the Graflex 16mm motion picture projector, embodying a new light source and meeting numerous demands often voiced by educator-users.

Cameras that simplify school and other group film production are seen in such new models as the Magnasync dual track magnetic single system, and the Rapromatic camera attachment that develops a film as fast as it is shot. Polaroid's "3000" speed film, instantaneous projection slides, and promise of color soon to come have many school applications. Improvements in transparency-making techniques by Ozalid, Tecnifax and Thermofax are further examples.

Most encouraging were the stories about novel adaptations by classroom teachers of familiar AV equipment: the overhead projector for group correction of theme papers; a math teacher's homemade tapes to teach three algebra classes at once, with special attention to slow and fast learners; the speech teacher's homemade teleprompter to coach a student speaker so that his classmates were not aware of the prompting; a guidance counselor's taping of talks by visiting college representatives and by former graduates to tell their job experiences to the new student crop—these and many more were reported in the pages of *EdScreen and AV Guide*.

We followed the progress of NDEA adminis-

tration, NAVA's improved liaison with the National Association of School Boards, the meetings of DAVI and its state affiliates, EFLA's second successful Film Festival and its branching out into regional meetings, NAVA's increased interest in distribution of entertainment films, AVCO-PI's coordination of AV public relations for its nine constituent national groups. The effect of the National Defense Education Act will long be felt not only in the large volume of AV equipment and materials it put into use under Titles III and V, but as initiator of over 80 research projects and more to come, under Title VII.

The interrelationship of audiovisual work in church and school involves no church-state separation issue. Our February editorial, "No Day of Rest," urged secular teachers to put their professional skills to use in AV activity in the church.

William S. Hockman's Church department each month offered helpful reviews and sage editorial counsel. Why is church AV usage down? Hockman said one reason was that distributor-librarians did not know enough about what was inside the cans they handled. In analyzing this year's "Green Lake" meeting (at Boulder) he pointed out that there is now no shortage of either equipment or materials, but that utilization is lagging.

All these and more paraded across the pages of *Educational Screen and Audiovisual Guide* during the past year, just as they had during 38 previous years. The forecast? More and better. It's reassuringly "mature" that we take ourselves seriously. Just let it not be 'too' seriously.

# New Directions For AV Training

by G. M. Torkelson

and E. K. Oxhandler

**T**HE current intensive self-evaluation being undertaken in the field of teacher preparation in the United States has been marked by controversy over directions for the future.

One group in our society feels that teachers are best prepared through a liberal arts, general education background without requiring any professional course work or preparation. Another group feels that many professional courses such as those in methods of teaching, educational psychology, tests and measurements and audiovisual education must be required of all. Characteristic of recent trends, however, are programs which embody an extension of the liberal arts, general education background of all pre-service teachers—while retaining a basic minimum of professional courses. To maintain proper balance in this latter approach, certain economies of time and effort, particularly in course offerings and course structure are essential.

One of the professional content areas now in the center of this dichotomy of ideas is that of audiovisual communications. Some professional educators feel that the essential elements of communication and the use of instructional materials can be absorbed almost by osmosis from other courses and that no formal professional training is necessary. The opposing point of view insists on a required separate course in audiovisual education.<sup>1</sup>

To determine the relative effectiveness of these divergent approaches, an NDEA research project is being undertaken at The Pennsylvania State University entitled, "An Experimental Study of Patterns for Improving the Preparation of Pre-Service Teachers in the Use of Instructional Materials and of the Effects of Optimal Use of Instructional Materials Upon Pupil Learning and Teacher Use," G. M. Torkelson, director.

The study is divided into four major patterns for improving teacher skills in audiovisual communications. These are:

1. A separate course in audiovisual communications.
2. The integration of audiovisual communications into general methods courses.
3. A pattern where all content is self-taught through appropriate self-study aids.
4. Audiovisual communications taught in combination with student teaching.

The population for the study is composed of students in the Elementary and Secondary curriculums at The Pennsylvania State University. In most instances students were assigned to the patterns on a random basis. Where circumstances prevented complete randomization, groups were equated statistically.

All students were given a battery of tests including: a multiple-choice information test; an illustrated matching information test; a mechanical comprehension test;<sup>2</sup> a short answer, completion test on equipment, identification, opera-

---

<sup>1</sup>Commonwealth of Pennsylvania, Department of Public Instruction, State Council of Education meeting, October 10, 1934: "A resolution passed requiring all applicants for permanent teaching certificates, on and after September 1, 1935, to present evidence of having completed an approved course in Visual and Sensory techniques."

<sup>2</sup>Bennett, George K., *Mechanical Comprehension Test, Form BB*, The Psychological Corporation, New York, 1951.

tion and trouble shooting; and an attitude scale. Upon completion of the course of study (either 8 or 16 weeks), these same tests were readministered with the addition of a timed performance test on audiovisual equipment. Since the mechanical comprehension test was used only as an equating instrument, it was administered only at the beginning of each semester.

The materials of instruction (films, filmstrips, charts, etc.), the syllabus for the course and the time for presentation were kept equivalent for each pattern. If variations in approach were necessitated by characteristics of the pattern, anecdotal notes were kept to record the differences. It is the purpose of this article to describe the student teaching pattern and to evaluate the findings to date.

In this pattern, the basic audiovisual content is taught "on location" during the eight weeks of student teaching. Laboratory instruction and practice with equipment is integrated into the daily schedule of the student teacher.

In general, the procedures are as follows:

1. Students meet with their audiovisual instructor initially within the first week.
2. Four hours per week are scheduled for discussion sessions.
3. Individual appointments are arranged between instructor and students for laboratory practice in the schools where their teaching occurs.
4. Each student is required to record his activities on several forms. Form No. 1 is used in reporting time spent in using audiovisual equipment; form No. 2 in reporting his classroom use of instructional materials. On form No. 3 the student orders such instructional materials as films and filmstrips from the Audiovisual Aids Library at The Pennsylvania State University.
5. Each instructor spends part of each of two days per week at the center observing the students using audiovisual materials in their classrooms.
6. Conferences are held with students concerning their experiences.
7. Near the end of eight weeks, the examinations mentioned previously are administered.

The student teaching pattern is further modified by saturating one center while leaving the other as is. "Saturation" means that equipment and teaching materials are added to the supply already in the schools, thus approximating a situation where materials and equipment are obtainable by the student teachers with minimum delays.

An example of this facet of the student teaching pattern: In one center which has students in six elementary schools, each school was supplied with a motion picture projector, filmstrip-slide projector, overhead projector, opaque projector, tape recorder, record player, projection stand and portable tripod screen. A lantern slide projector was available on short notice. This equipment supplemented that already owned by the school system. On occasion, different makes of the projectors were "traded" among the schools to provide the students with experience on different equipment.

The "as is" or non-saturated center used the equipment available in the school system. Occasionally some equipment was brought in only for purposes of familiarizing the students with different models. None of this equipment was left for use in the center.

Results show that combining a course in audiovisual communications with student teaching has an obvious advantage over the other patterns in the intrinsic motivation that comes from using instructional material during actual teaching. While the students taking the required course on campus range in their reactions from being negatively rebellious to being actively interested, the reactions of those taking the course while student teaching indicate somewhat less negativism, plus numerous expressions that the course is necessary and interesting. This interest is maintained by many even though the students must meet for lecture sessions late in the afternoon or in the evening.

Student comments bear out the basic premise of the student teaching pattern that the time to teach instructional materials and communication is when these concepts are most needed and relevant! Typical student reactions are:

"We can really understand the reason for using these materials when we see the children respond to the things we are trying to do."

"The things we talk about we can use in the classroom the next day."

"Although it makes an awfully long day, I'd much rather take the audiovisual communications course this way; it is more meaningful."

"As student teachers we were able to have questions answered as situations occurred concerning visual aids and equipment. I feel that this advantage is not offered to students taking the course on campus."

On the negative side, comments were concerned mainly with the addition of the course content to workload in student teaching. Ideally, one would expect that the adding of an audiovisual course to student teaching would not mean the equivalent of two separate experiences but rather a commonality of experiences which minimizes the repetition inherent in the objectives of both student teaching and an audiovisual course. During the continuation of this experiment over the academic year 1960-61, attention is being directed toward improving this combination.

What, then, may be concluded from our experimenting thus far? On the positive side, one could conclude that:

1. Audiovisual instruction during student teaching offers almost immediate classroom application of principles and materials presented in the course.
2. The combination with student teaching is more economical in a time sense since two similar educational objectives are being achieved concurrently.
3. The demands of immediate use of materials and equipment in student teaching offers increased motivation for learning.
4. The teaching of an audiovisual course "on location" has the secondary advantage of stimulating the regular teachers to "take

stock" of their own procedures, particularly where adequate materials and equipment are available. As a result of this form of "in-service" education, some of the regular teachers have introduced new techniques in their classrooms and have requested that the school administration supply additional and newer types of equipment.

5. At this point in the experiment, it is not possible to make conclusive statements concerning relative amounts of learning and acceptable performance among student teachers attributable to any pattern or combination. The authors suspect, through their experience in the student teaching patterns, that the acquisition of knowledge, skills and attitudes relative to the incorporation of audiovisual materials into teaching will be enhanced by combination with student teaching.

On the negative side, there are several judgments that can be made.

1. As constituted in the experiment, i.e., with the audiovisual instructor traveling and teaching at the center, the pattern is prohibitive on the basis of per pupil expenditure for instruction. The audiovisual instructor spends two days each week on location in this procedure with 25 students as a maximum. This problem may be offset by some combination of self-study materials with the student teaching supervisor assuming responsibilities for the audiovisual instruction. As presently structured, however, this would place an extra obligation upon

the supervisor, one which unfortunately could be detrimental for audiovisual content since skill as an audiovisual instructor is not always, in practice, a sine qua non for the employment of a student teaching supervisor.

2. A second problem, economic and also logistic, concerns the need for adequate supplies of equipment and materials to provide proper teacher preparation. Where equipment and materials can be concentrated in a curriculum materials center on campus, such convenience can insure thoroughness of training. On the other hand, varying supplies and locations complicate the task of thoroughness of instruction when those materials may be incomplete and spread inconveniently among the buildings of a public school system. In comparison with this situation, consider how many students might be prepared in basic audiovisual skills in the course on campus during two days as compared with an instructor teaching 25 students on location.

Since the experiment is continuing in this academic year, with some revisions in the student teaching pattern, it is not possible to conclude categorically that the pattern in question is the best way to prepare teachers to use audiovisual materials. Continued experimentation is being coupled with observation of student teachers in action once they have achieved their first jobs. This report, therefore, should be considered only as an interim judgment and final statements must be delayed for a later publication.

An overhead projector in use during an English class. Equipment such as this is widely used for classes such as spelling, language arts and typing.

# A Community Resources File

by Richard D. Foltz

A useful addition to administration in any school district is a catalog listing those who are specialists in a given area. Often these are non-teaching people, such as lapidarists, musicians, dancers or collectors. A class frequently can benefit from a lecture or classroom visit by one of these.

My first experience with this idea of a community resource file was in the Bellevue, Washington, school district. It was felt that this highly professional community had a wealth of supplementary knowledge to offer the school. This knowledge could be valuable because not many teachers, for example, can present a collection of rocks for a science unit in geology. Likewise, not many classrooms can produce a set of slides with a commentary on "Buildings in Rome." Perhaps the community could produce not only these but an ever wider range of information.

Under the supervision of Patricia Foster, director of instructional material, a questionnaire was circulated to parents of the school children. The questionnaire asked parents to list any special experience they had in the arts, music, sports, drama, dancing, mechanics and writing, as well as other fields. They also were asked to check an applicable hobby such as stamps, coins, bird watching, weaving, photography or gardening. Other items asked parents to describe their occupations and list any interesting trips they might have taken. Finally, space was provided to list any other persons who might have a specialty and who would be willing to donate their time and talent to the schools.

The questionnaires were then sorted and arranged according to subject in a catalog with

other classroom aids and were distributed to the teachers. The 30-page section listing community personnel who would be willing to donate their time and service covered 15 subjects, including arts and crafts, drama, English, geography, history, science and travel.

Other school units across the nation have similar catalogs or projects. Communication with Benjamin C. Willis, general superintendent of Chicago schools, revealed that in one of the city's southeastern schools . . . "The district superintendent, working with the University of Chicago and representatives of the steel plants, is devising methods by which the technical, mathematical and scientific genius of men in research laboratories might bring unique academic talents to assist in the educational program of the high school."

Correspondence with J. Wayne Wrightstone, director of educational research with the New York City schools revealed that their *Guidance News* lists such persons in that city.

The Los Angeles city schools have a seven-page list of programs including animal acts, puppets and magicians. These entertainers have been previewed and rated by a committee. A fee is charged by many of these entertainers.

Is this community resource file available only in the large cities? To the contrary, even a small community should have several persons with an interesting occupation or hobby. Are these people willing to give of their time? Usually if approached properly and invited at a time convenient, they are willing. Of course they should know the age level of the group to be addressed and the length of the class period.

# New York School Holds Preview Party

by Philip L. Burger

**T**HE Preview Party is gaining in popularity as a means of selecting filmstrips to be added to a school's library of audiovisual materials. At such a party, all the teachers in a building are invited to get together after school and spend a couple of hours viewing a large number of filmstrips.

By this means the process of selection which might otherwise stretch over a period of weeks or even months is accomplished in one afternoon. It has been called a party because it is usually voluntary, and some refreshments are served.

Recently I was asked to stage a preview party at the Alexander Central School. Alexander is a small community in western New York about half way between Buffalo and Rochester. The Central School comprises two buildings, one housing the elementary school with 24 teachers and the other housing the junior and senior high schools. Separate preview parties were held in each school, one on Monday in the elementary school and on Tuesday in the high school.

In advance of the preview party, the audiovisual director, Mrs. Dorothy Fritts, queried the teachers as to their interests in filmstrips to be added to the school's library—which already consisted of about 500 filmstrips.

This list was reviewed with the filmstrip dealer, who handles four major lines of filmstrips offering a total selection of some 5000 titles. He made further suggestions of new or outstanding filmstrips and arranged to have these available on the day of the preview party. He also arranged to supply eight previewers and four filmstrip projectors to supplement those available at the schools.

The library room was used in the elementary school, and filmstrips were set out on six tables divided by grade level and subject area. Each table had at least one previewer and projector and other tables were set up with previewers and projectors so that all 24 teachers could be accommodated.

Mrs. Dorothy Fritts, audiovisual director, and the dealer select about 50 titles for viewing.

The dealer explains the operation of one of his projectors to some of the teachers.

A group of primary teachers look over filmstrips on children's stories.

Teachers compare several filmstrips from the same subject area.

Simple evaluation forms were provided so that teachers could make notes and designate their choices. They were asked to indicate their prime choices so the list could be reduced if necessary to stay within the funds available.

The atmosphere of the preview party was extremely informal and teachers worked either singly or in groups as they desired. Coffee and cookies were available during the afternoon. Typical reactions of the teachers were:

"We have never had the opportunity of seeing so many filmstrips."

"This was an interesting break from our usual teacher's meetings."

"We didn't realize there were so many good filmstrips available."

From the standpoint of the audiovisual director, it saved her a good deal of time as compared with the methods previously used. This had involved getting filmstrips in as they came to her attention, then distributing them to interested

teachers, keeping records of what had been received and making sure they were returned when previewing was over.

From the dealer's standpoint it meant that he could make available to the school many more titles than he was able to do if the filmstrips were left with the school for a period of time. This he can do with a smaller investment in filmstrips than if he were to leave them at many schools for some period of time. To make it economically advantageous for him to stage a "preview party," he usually has an understanding with the school that they are ready to buy a quantity of filmstrips.

One note of caution: From the school's standpoint, a preview party is a frustrating experience for teachers unless their selections are added to the library. Also, this kind of preview does have the limitation that the filmstrips cannot be tried out in the classroom with a class, but in most cases this is outweighed by the advantages.

A group of teachers gather for consultation on some of their recommendations.

The principal, Miss Mary Judge, acts as hostess in serving coffee and cookies.

# How Audiovisual Aids Make Teaching And Learning Easier

by Estelle W. Hodes

*This article received an honorable mention award in a recent contest conducted by Viewlex, Inc., on the above subject.*

AMONG the goals of education are the developing of the pupil's ability to deal with environmental factors and forces, and promoting his growth in an appreciation of his cultural heritage. Others we could include are the fostering of an intelligent allegiance to American ideals and active participation in democratic practices, and guiding the student in gaining an understanding and appreciation of the contributions made to human welfare by individuals and by the various national, religious and racial groups.

The teacher who makes intelligent, effective use of the wealth of audiovisual materials available to him can make subject matter vividly interesting and exciting, and can offer an enriched and much broader program of study. These teaching aids can help the student acquire better understandings, provide him with vicarious experiences and motivate him in the learning process. They provide the student with many learning opportunities through which he can see, examine, hear and participate in classroom activities. Thus audiovisual aids play an important part in teaching, particularly since verbal descriptions do not always make clear the thing described, and often a lack of background experiences of the student prevents full comprehension.

For example, filmstrips are easily projected and studied in the classroom and are extremely valuable in teaching, among other things, understandings of word symbols, vocabulary building, symbols involved in maps and in arithmetic. The many and varied education filmstrips make possible group instruction in learning skills, developing aesthetic appreciations or providing in visualized form reproduced factual information which might otherwise not be directly observed. A single frame may be repeated and discussed, and when the teacher wishes to emphasize a particular point, he can control the timing and vary the speed to meet the needs of the students or adjust the commentary to the level of the students. Filmstrips and equipment are small, compact, not too expensive and easy to operate. The filmstrip projector may easily be operated by stu-

necessary viewing equipment is in the forefront of educational-technological development; he dents and therefore an excellent opportunity is afforded for participation by students in this class activity. A filmstrip used during the first part of a period may be best utilized if discussion takes place at the end of the period, after the viewing experience has been thoroughly explored. Since filmstrips do not need to be shown in total darkness, students may be encouraged to take notes in preparation for further discussion or follow-up research.

Another good teaching aid is the slide projector, which utilizes 2 by 2 inch slides. Though slides are somewhat more difficult to handle than filmstrips, they are extremely flexible in that the teacher may determine the sequence according to the special needs of a particular class. Slide sets may be easily revised and kept up to date simply by replacing outdated pictures with newer materials, or adding individual slides made by the teacher or student. The teacher should, of course, preview the slides and prepare a preliminary plan of the slides to be used for a given lesson.

Other projection materials adaptable for classroom use are 3¼ by 4 inch lantern slides, stereo reels and microfilms. The lantern slides have a larger area of transparency image, with more detail and screen brilliance and are particularly good for use in reading instruction with a tachistoscopic attachment on an overhead slide projector. The stereoscopic 3D slide reel may be used either in a hand viewer or a special projector, and it helps to create an illusion of reality. The low cost and ease of handling by individual students make stereo reels a desirable medium for special enrichment studies.

The imaginative teacher tries to make use of the many types of still pictures obtained readily and inexpensively from magazines, newspapers, books and other sources all around us. The opaque projector provides the teacher with the means for enlarging pictures for viewing and extended study and to develop a common learning experience through sequence collection. Pictures can be easily understood, have great value as a medium of communication, and can serve as an international language for the social studies program.

The teacher who can avail himself of the great variety of educational motion picture films and

virtually is in the position of bringing the world to the classroom. Through dramatized films, the teacher is able to help recreate the past in teaching ancient, recent or contemporary history. He can present geography in a vivid way through travelogs and can span time and space through use of time-lapse photomicrography in teaching science. The alert teacher keeps informed of sources for obtaining these films and encourages school administrators and interested parent groups to make them available to the school.

Radio and recordings also play an important part in helping the teacher achieve many worthwhile educational goals, and through them, the teacher is able to bring to his classroom the full range of the "world of sound." Through discs and tape recordings, the teacher can relate the student to his present day world as he weaves a continuous story of the political, economic and social development of our country — how our social institutions and democratic principles came into being; how customs of other nations helped to build our own; and how the citadel of democracy, the United Nations, became a reality. Appreciation of other cultures and desirable attitudes toward ethnic groups may be fostered through recordings of music of other lands, and at the same time "how to listen to music" may be another desirable outcome.

Good citizenship can be taught and emotional responses to the American ideal evoked through the vitalizing recordings about the lives of famous men in history. The history lessons may be effectively dramatized and students made to feel that "they were there" as the illusion of reality is created through use of recordings of history-making speeches. The voices of famous news analysts; the oratory of Winston Churchill; the dramatic voice of Franklin Delano Roosevelt as he spoke to his people and the people of the world through the difficult war years, and then the recording of his funeral procession; the boom-

ing, dictatorial voice of Adolph Hitler, the sound of the Nazi storm troopers marching; the epoch-making occasion of the acceptance by Douglas MacArthur of the Japanese surrender; and the voice of the then secretary of state, Edward Stettinius, as the San Francisco conference of the United Nations is opened—all of these and many more, including musical recordings, are at the disposal of the teacher.

These vital events, which are permanently "alive" through recordings, plus the beautiful music of our land and of other cultures, should be fully utilized by the teacher so that they may serve the students of today and will also be available to serve the children of the future.

Recordings may be used for integrating subject matter with the total school program and varied activities such as dramatics, to develop the student's poise and overcome personality problems; English, to develop interest in good literature and poetry and foster habits of good speech; music, to acquaint students with various types of music and songs of other lands; physical education, dance instruction and sports, to develop rhythm in exercise, skill in games, or for teaching synchronized swimming.

School can and should be fun for the young, and the properly trained, alert teacher draws upon the vast reservoir of the old and introduces the new tools for learning—films, filmstrips, field trips, textbooks, references, newspapers, magazines, slides, flannel boards, pictures, exhibits, and others to make the school day come "alive" with meaningful experiences.

Teachers are in the enviable position of early and continuous contact with children and youth and of having the opportunity to give them the benefit of the enriching, stimulating audiovisual materials which will help them to develop to their full potential and thus nurture the nation's greatest assets—its young who are learning to be the citizens of tomorrow.

# AV in the Church Field

by William S. Hockman

## May We Comment, Please!

• Gabriel Courier, commenting on the news in the October 1960 *Christian Herald* magazine says: "A Sunday school booklet for nursery and kindergarten classes, part of the United Church of Christ's new religious education curriculum, shows Christ and his followers in 'Bermuda' shorts or slacks and sport jackets, with slight beards and short hair." May we make two comments: After receiving some years ago a scoutmaster version of Jesus' life and work to come out as a 'church' film, we predicted that it would be the film people who would first give us a modern-dress version of Jesus. Let me apologize to the film folks right here! Secondly, how silly can we get! Suppose now we are to get Paul in a power boat!

• We are for research. We are for research in the field of communication. We want the findings of research brought fruitfully into the production of the media which the church uses in getting the Gospel into the minds and lives of boys and girls, youth, and adults. We want the validated findings of research made available to those who devise and use techniques for the church hall and the classroom.

But may we comment that we are not now perishing in the church field for more and better 'communication research.' What we don't have is educational imagination. What we lack is knowing *how* to relate good AV materials to our jobs. It takes educational imagination, experience and understanding to set educational material, whatever the media, into the experience continuum of the child, the youth, the adult, whether in church, church school or school. No amount of research will stimulate local church leaders to use what is already available, nor will it motivate local churches to provide abundant AV materials for teachers who would use it

if it were more easily available for preview and study. Lastly, what we really need is to catch up with the research we already have! We need motivation, let's face this unpleasant fact.

## Notable Achievement

A decade from now we may say that it was the United Church of Canada which showed the way to better and broader utilization of audio and visual materials. As we look back on 1959 and 1960 we may be able to see that it was the skillshop program of this great church which started the use-curve upward on the graphs. Certainly, this denomination has been pioneering in the area of better and wider usage of AV materials in advancing the total program of the church.

Just concluded is their fifth skillshop for those church leaders who have specific responsibility in certain conferences and areas for education, missions, men's work and women's work. At Grand Falls, in Newfoundland, close to 40 church-men and church-women met for two evenings and two days to learn about the vast AV resources which were available to them in furthering the goals of the local church and the denomination. To this was added knowledge of how audio and visual materials can aid the church's work in all areas of its concern. And to this was added one more very significant thing: how these people, one by one, could go back to their own presbyteries and conferences and put on similar skillshops for the people in the local church.

This intensive program was taken in earnest. Out of four previous skillshops come encouraging results. In Alberta just about every conference of the church is holding or planning AV skillshops for local church leaders. New leaders are found. The AV movement is getting down to the grass roots of the church. But it all started when the AV leaders of the denomination resolved to do something and when the General Council approved this far-seeing and already-fruitful pioneering.

## A Remarkable Film

If you are convinced that your five senses report to you adequately on the extent and nature of the universe, then don't see the 60-minute color film *Windows of The Soul*. If you would like to miss seeing one of the finest and most interesting 'science films' made to date, then don't bother about this newest release from the Moody Institute of Science, Hollywood 25 California.

After seeing this film, this reviewer has the impression that it will be some time before its beautiful content organization and its general technical excellence will be equalled or surpassed. One by one the five senses are taken up. We are shown how wonderful they are. We are shown, also, how inadequately each of our senses report the objective world. This may come as a jolt to some. It will stir the mind and exalt the spirit of others. "Shown," we have said. Let that be emphasized! It is these experiments which make up much of the content of the film, each one carefully designed and beautifully recorded by the camera. There is fineness in all aspects of this job.

When it comes to total impact we are shown that all the wonderful technological apparatus which we have today has been called into existence to supplement, correct and extend our senses as they attempt to report reality. And none of this was possible before man took a 'scientific' attitude toward his tangible world where the senses operate. Post-scientific in one area of life, man has made great progress; pre-scientific in his attitudes toward spiritual values, he has about the same general stance as Ab, The Cave-man.

To get down to today: he dreams of peace but plans for war. He has a technology for one and not the other. In one there are bold ventures; in the other timidity and paralyzing hesitation to venture. Well, you see the film for yourself and it will start you thinking—and planning to present it to the adult and youth groups of your church.

## We Hate To Say This

Try as I would, I could not like the motion pictures *Exploring Ancient Cities* and *The Dead Sea Scrolls* as much as I did the filmstrips *Bible Cities* and *Bible Scrolls*. There must be a reason why, and this reason may be completely personal and invalid. It shall not be dogmatic.

First, the filmstrips were fine filmstrips. They had good technical qualities—photography, color balance, editing and commentary rated fine to excellent. They reported the data; they

---

*Comments and materials for review should be sent to the department editor—William S. Hockman, 12 June Drive, Glens Falls, N. Y.*

ot across what they set out to deliver. here was no motion and they delivered none.

Secondly, the films could deliver little more than the still pictures by the very nature of the subject matter. The filmstrips mopped up all the meaning. There was nothing extra for the films to get. Camera-action here could not help much. The subject was static and could not be given the life of motion by the camera.

In the third place we must acknowledge that there are many users who will assume that if the filmstrips are good the films must be a great deal better. That's the slant of their thinking and nothing will change it. Family Filmstrips, Inc., knows this and has provided a film-version for those who must have everything in this media. Until we users wise up on the inherent nature of the several audio and visual media the producer will need to serve up still-picture material in the more expensive and less effective moving-picture form. The essential nature of a given body of subject matter calls for a certain audiovisual media and to translate it into any other media is a risky procedure—in my not-so-umble judgment!

## Fine Format

Most seeing is interesting. Much hearing is dull. Most interesting things will be entertaining. There is such a thing as an interesting film. There is no entertaining film. Entertainment is a product of interest. There is no happiness-activity. Happiness comes out of an activity of a certain kind and which has a certain structure.

Now all this is to say that we need new ways to make films, especially in the religious field. We have some mighty interesting things to report. If we show them they may be interesting. If we talk about them, in either spoken or printed words, they may be pretty dull. We certainly know that showing gets the greatest hold on the attention.

It must have been this sort of reasoning that guided those who made the 30-minute color film *Island In Time*. Could you talk 30 minutes about four training centers of your denomination? Could you be lively enough to make the places and people come alive? Could you make people glad that they had given money to such work? Could you get more money to extend this work?

Could you tell how people found in these training centers what they needed to release their personality and spiritual energy, to give them new views of themselves and their friends, to set free their spirits so that living became more meaningful and service to their churches and communities more significant and blessed with more tangible results?

I'll answer for you: You could *not*! But this film gets the job done. It does it with a new interview format. There is no jerkiness. It flows smoothly. These people, who speak many different times, get the story of the training centers told, and tell us, too, what happened to them as persons while they were there—some for a week, some for several months. A good film for denominational film planners to see. From Berkeley Studios, 315 E. Queen Street, Toronto 2, Ontario, Canada.

## Young Teens Looking At Life

How can the mirror be held up to Junior High young people so they see themselves and life, so they see themselves in relation to both their big and little problems and get a glimpse of

**JUST OFF THE BOARD**

**FROM BESELER**

## NEW BESELER MASTER VU-GRAPH (Series 7700) LOWEST COST LOW SILHOUETTE OVERHEAD PROJECTORS

The new Beseler Master Vu-Graph Series 7700 provides the brilliance, power and capacity of largest overhead projectors in a unit with an extremely low silhouette—at the lowest cost of any comparable equipment. As with larger units, it projects in fully lighted rooms from 10" x 10" transparencies to a uniformly brilliant 13' x 13' image. Yet, projection head and overall dimensions are so compact that it eliminates virtually all obstruction to eye-contact between class and instructor. Equally important, it insures perfect visibility of the image from every seat in largest classrooms or auditoriums.

Features of this unique projector include:

- Compact Projection Head only 7" x 6"
- Projection Head Height only 17½" maximum
- Overall Size only 23" x 12½" x 12½"
- 1000 Watt Brilliance
- Internal Cellophane Writing Device
- Maximum Portability

212 S. 18th St., East Orange, New Jersey

themselves as they may become?

Doing this, and giving some of the answers, seems to be what Family Filmstrips, Inc., was trying to do in its four-unit "Young Teens and Life Problems" series. The 42-frame *Who Am I?* is to help young teens get acquainted with themselves physically, mentally, spiritually—as children of God and as having a purpose to fulfill. Dorothy Severance writes the commentary and the stylized cartoon art is by Jerry Bowen. Tammy Windsor and Richard Gerring voice the commentary. The teenager and her mother, from across the street, who sat in on the preview of this series, thought this the best of the set.

*What Can I Believe?* That's a teenage problem of first magnitude! Here we see a teenage boy and girl trying to evaluate several different philosophies of life. A narrator keeps the continuity intact and supplies some of the slants. At last these several life-stances are compared with that of the Christian, which looks pretty sensible. In this 'philosophy' there is something to try and to believe. The above team is joined by Stan Warwick who helps with the narration. The mother said: "Not quite as clear as the first." Her daughter: "Gee, I'd have to see that several times. I didn't quite get it." Well, why not? Good usage can surely take care of that!

Now we come to the tough job *Christian Commitment*. It is brought off by the same team as the first above and I think they do pretty well. The producer says we should look for these things on the filmstrip: "Some cause to which people dedicate their lives—results of dedicating one's life to worthy goals; changes that come when a person accepts Christ as Lord and Savior." Are these things touched upon? They are. How well? Now that the rub! How well in a short filmstrip can this broad and deep subject be explored. We think good enough, and we think the follow-up can easily take up where the filmstrip leaves off. After all, that is what the filmstrips are for—getting the subject before the group for discussion, not to stop in Education is what educators bring to pass. In getting results, they use a sorts of materials.

Should Young Teens look ahead to college and career? They certainly should. A lot of them, according to some pretty reliable findings, will wind up doing in adult life what they dreamed themselves doing when they were around 13 years old. *Looking Ahead To College and Career* was turned out by writer Robert L. Danner, artist Richard Moore and narrator Marx Hartman. The mother and daughter from across the street like this one, and the teenager *was* thinking about career and college. Two things were accented: the idea that we are stewards before God of our lives and our talents, and that there are things we can do *now* about college and career. Good job!

Each of these filmstrips uses two frames to state what they are driving at. That's a help. Each one has discussion bands. These are pretty good. Each has a fine leader's guide, to be taken seriously by the user. Technically, all four meet the test of good quality.

Now for use: Junior High young people should see them. Not too fast please. One each week might be too much. Try presenting one a meeting with assigned follow-up activities for the group and discussion the next week. I'd string them over four months. This allows the group to mature some and voids that overstuffed feeling teenagers often get when the same theme or meeting format is used too long.

Lastly, I'd use them with the parents. My neighbor was sure that parents ought to see them in order to talk out some of the ideas presented. I think she was dead right on this. So get and use this top-grade series. From your AV dealer, of course.

**Rugged construction plus ease of handling equals...**

Everyone working with audio-visual equipment knows that your best buy is *the best you can buy!* In the case of projection screens, that's Da-Lite... a full line of wall-type and tripod models with exclusive features developed over the past 50 years by men who specialize in improved picture projection. # AUDIO

by Max U. Bildersee

## "The Old Order Changeth . . .

. . . yielding place to new . . . ." wrote Alfred Lord Tennyson and this statement is true particularly regarding the field of recording and the school use of records.

About a quarter of a million words ago—in September, 1948, in the first of these columns—we wrote: "LP or 'long-playing' records, on which the conventional three-disc, six-sided album can be reproduced on one side of a single 12-inch record, represent a technical advance in the recording art."

Perhaps this, in retrospect, is the cautious and conservative understatement worthy of review because the introduction of microgroove recording has revolutionized an entire industry. More than that, it has also revitalized an industry which had faded from the social scene, having been replaced by other media, and was then facing the impact of total television. Yet, today, 12 years later, the long playing record has become so commonplace in home and school that it is difficult or impossible to find a single person who still uses the older '78' rpm records except to replay recordings of nostalgic value.

Schools, in 1948, boasted many record players, all of them solely adapted

*Comments and materials for review should be sent to the department editor—Max U. Bildersee, 36 Holmes Dale, Albany 3, N. Y.*

to the standard groove record. There were dual speed players adapted to standard records and 16 inch, 33.3 rpm transcriptions. But the record we know today was then unknown. It may be possible that today's freshman in a teacher training institution has never heard a shellac 78 rpm record! Such is the change in the industry. Today we doubt that a school exists—certainly not a multi-room school—which does not have and use a record player. And the records in use are all—or practically all—33.3 or 45 rpm microgroove records.

There are two exceptions worthy of mention. Some schools are also using the even newer 16.67 rpm records on which almost one full hour of sound can be etched on one side! And some schools are using 78 rpm records for health and physical education classes in which much rapid student movement is involved. And this is logical because in the larger groove, the larger styli ride more evenly under such extremes as folk and square dancing.

Back in the early days of the column—again in 1948—we reported that "more than 30 record companies produce records which will be useful in schools." Today the number has doubled and again doubled, and the end is far from being. In the past few months we have heard and reported on the product of twice this number of companies and we have but scratched the surface, for we believe it to be our responsibility to bring to your at-

# "DON'T GLOOM UP" ROOMS

**NEW**  
projection screen  
now enables you  
to view pictures in  
semi-darkened rooms

It is true that you can project better pictures in darkened rooms—but there are many times when room darkening is inconvenient, difficult and costly. Now, with the new Radiant exclusive "truly lenticular" screen, which controls both horizontal and vertical light reflection, you can project slides and movies effectively in normally or partially lighted rooms where no unusual lighting conditions prevail. For schools—this enables viewers to take notes during showings, minimizes inattention and misbehavior, and permits simultaneous use of collateral material.

Send for Illustrated Booklet which gives the complete explanation of this new truly lenticular screen, also catalog giving specifications and prices of Radiant's complete line of lenticular and glass-beaded screens of every type for every purpose.

tention the worthwhile product and not the second rate material.

Catalogs of records have changed in appearance and content over this period, too, and the record companies are working hard not only to create school-valuable discs but also to supply schools with reliable information about their recordings. We urge you to seek the new, revised educational record catalogs published by RCA Victor (155 East 24th Street, New York 10) and by Capitol Records (1750 North Vine Street, Hollywood 28). These are but two of many but they have been issued very recently and if you do not already have them, they are worth acquiring.

Some of the more active producers in the field whose catalogs you may want to have at hand are Folkways Records (117 West 46th Street, New York 36), Audio Education (55 Fifth Avenue, New York 3), Columbia Records (799 Seventh Avenue, New York 19), Spoken Arts (95 Valley Road, New Rochelle, N. Y.), Spoken Word (10 East 39th Street, New York 16), Caedmon Records (277 Fifth Avenue, New York 16), Decca Records (445 Park Avenue, New York 22), Enrichment Records (246 Fifth Avenue, New York 1), Carrillon Records (202 Davenport Avenue, New Haven, Conn.) and Weston Woods Studios (Weston, Conn.).

Of course no such list is exhaustive and it does not mention, much less emphasize, the great contributions made by producers who offer a very few titles. These, too, should be investigated and should be known to audiovisualists and teachers.

The world of records for instruction is growing up, and whereas the bulk of yesterday's contribution was directed at the elementary school the weight of today's record product is on an 'egghead' level and is designed to

appeal to much more mature students and to adults.

There are good reasons for this. First, there is a growing realization of the potential contribution of recordings to instruction on all levels, perhaps spurred by the language explosion of recent months in which the recording has come into its own as a tool for use by both student and teacher. Another reason—a strong one—is that many more libraries are circulating records as a factor of the library loan service. It is probable that considerably more than 2,000 public and college libraries support spoken record collections and circulate them to the listening public, to schools, and use them in a variety of ways to increase traffic at the loan desk. Much of this progress can be traced to the development of long playing or microgroove records less than 20 years ago!

Schools can and should borrow some library techniques themselves and use them to increase listening—purposeful listening—on the part of their students. For instance: has your school library a listening corner where students can sit with headphones and hear masterpieces of literature as they are interpreted by great artists? Has your library offered students the opportunity thus to hear history as it was made through the last double decade? Our young people are interested in what goes on about them; they are capable listeners and should have this opportunity.

Do you schedule a daily, or weekly, voluntary audio program for interested students? Have you thought that you might schedule a complete Shakespearean play over a five week period, presented serially, act by act, for interested student listeners? It can be done and should be done. Have you planned for your students to

hear C. Northcote Parkinson discuss political science, John Mason Brown explore the humanities, Samuel Eliot Morison relate in detail his association with and interest in American history, Charles Frankel reveal his philosophical attitudes and Ashley Montagu report on the meanings of anthropology as he sees them?

Do you schedule readings of prose and poetry as a voluntary extra for your students? Do you bring them such artists as Basil Rathbone, Orson Welles, Alexander Scourby, Nancy Wickwire, Blanche Yurka, Anew McMaster, Howard Da Silva, Hiram Sherman and many others interpreting the work of Poe, Shelley, Mark Twain, Shakespeare, Byron, Keats, Whitman, Longfellow, Milton, Masefield and too many others to mention? Indeed, what have you done about using records to acquaint your students with the sounds of modern American poets? You can profitably use the address we gave you for Carillon Records and discover a wealth of material in just this little area available to you now!

You may ask, "Where can we borrow these for our students to hear?" You are aware that loan libraries of records do not exist as do film libraries. But the per unit cost of records is parallel with the per unit cost of books, and schools without adequate library facilities today are depriving students of learning and of experiences which are integral to growth. Borrowing records for this purpose is undesirable; the recordings should be on hand and readily available for the variety of in-class, out-of-class and home listening opportunities which are ever present.

Most homes today boast record players, few have 16 mm sound projectors. Most students have access to a variety of essential equipment for their audio learning, and little access to machines essential for film projection. As we teach the 'whole' child, so we must offer him the 'whole' experience through every medium at our command and indeed make it easy for the student to know the variety of experience available to him.

Newspapers most recently have been headlining the problem of learning in the area of English. Such statements as "Colleges To Fight Decay In English" and "National Program Set Up To Overhaul English Teaching" indicate the seriousness of the problem. But too often the college looks not at itself but at lower institutions in decrying current efforts. The College Entrance Examination Board recently started "the first nationwide program to halt the deterioration of high school English instruction." The

CEEB is urging that English teachers stress first and foremost the formal teaching of language, composition and literature while underscoring the need for knowledge of grammar and a maximum of clear, descriptive writing where demanded.

The CEEB, we hope, has not lost sight of the importance of language as a communications tool. Teachers listening to the 'off the cuff' remarks of the presidential candidates these few months past have perhaps been horrified and dismayed at some of the sentences (a generous use of the word) employed. Yet comprehension was complete. The listener knew what attitude was being expressed and what ideas were being expounded.

### Some Self-Examination

We hope that the colleges will look unto themselves, too, in this examination. We have been told that education in the art of communication, study in English to be specific, is hardly significant in a technically oriented institution preparing students for other than intellectual pursuits. Just as we urge a broad listening program upon the secondary schools, so we urge similar programs intensified by maturity upon the colleges so that their highly trained individual may also be appreciative of letters and able to use both the written and the spoken word effectively in communications.

We are not, fundamentally, in difference with the CEEB, but rather we urge that each of us look to the institution wherein we serve and ask the searching questions which evolve into "What more can we do, now and tomorrow, to offer all of our students

the greatest opportunity to become acquainted with the literary heritage and creation of a vibrant society?"

Books and records together offer the greatest opportunity we have, as schoolmen, to achieve the desired end. A literate body politic will be discriminating, expressive and responsive. Thinking will become a discipline, a self-discipline if you please, in which the questions of "how" and "why" become commonplace. No student should reach or leave college unprepared to read intelligently, to listen intelligently and to communicate.

Dr. Edward S. Noyes, acting president of the CEEB, expressed the hope that Congress would extend and enlarge the National Defense Education Act to include and to emphasize the study of English so that it would retain its proportionate value and position in the educational plan of the nation. With this we heartily agree providing that, in accepting federal support, no community is required to abandon any facet of its control over the scope of matter studied in the classrooms but rather is encouraged to reassert this control and to expand offerings to meet the demands.

Further, in the establishment of these forms of aid designed to make dramatic contribution to educational progress, the Congress must establish more adequate safeguards so that no small, ambitious, self-seeking clique of empire builders, no matter where or in what position of responsibility and prominence, can seek to gather unto themselves educational control which deprives the local community and the hardworking school board and local school administrator of ultimate authority and responsibility.

# FILMSTRIPS

by Irene F. Cypher

...there goes another Family Filmstrip Basic Filmstrip Library delivery...and another Sunday School will reap the benefits of this well planned library of audio-visual materials. ....full details at your Family Filmstrips dealer. Or write for free brochure.

Every so often it is apparently wise to repeat a theme, reiterate a word of caution, review something said in the not too distant past. With no apologies therefore, we wish to recall the fact that everyone concerned with the production of filmstrips has at one time or another warned of the danger which lies in making filmstrips too long, the danger of including too many frames in any one strip.

A filmstrip that is over-long can be a deadly failure in the classroom. Teachers tend to project a strip in its entirety, no matter how often they hear it said that effective utilization occurs if you use only a few frames at a time, or project only a section of a strip at a time. The teacher who actually gets material and projection equipment together for a lesson usually proceeds to show a filmstrip through to the bitter end, and if the strip is 50 or 60 frames in length, chances are the class will be happy when the lesson is over.

My grandfather used to say "Enough is as good as a feast" and that certainly applies to the number of frames included in any one filmstrip. In the past few months we have seen a number of rather long filmstrips, and we hope the producers stop to consider the wisdom of keeping classroom viewing situations in mind before they make either sets of strips or single units. Gilbert and Sullivan have advised us to "make the punishment fit the crime," and we think this good advice to keep in mind when editing filmstrips material.

*Creative Cookery With Cereals* (single strip, color; produced by the Cereal Institute, 135 South LaSalle St., Chicago 3, Ill.; available without charge to high school economics departments.) An interesting filmstrip, coordinated to a cook book pamphlet, with some good information about how to use cereals in many kinds of cookery. It is interesting to note that the filmstrip constantly turns our attention to the cook book, and sets the

*Comments and materials for review should be sent to the department editor—Irene F. Cypher, New York University, 26 Washington Square, New York 3, N. Y.*

stage for actual cooking experiences. We are given some facts about the nutritional value of cereals, a daily food guide, and an account of the grains from which we derive our familiar cereals. This is a useful combination of filmstrip and printed material, particularly good for junior and senior high school work.

*Growing In Citizenship* (six strips, color; produced by Young America and available from McGraw-Hill Book Co., 330 West 42 St., New York 36; N. Y.; \$33.50 set; \$6.50 single strip). Understanding of the responsibilities of citizenship is the basis for the successful continuance of our own way of life. This series shows how the good citizen carries out his part by obeying rules and laws, by cooperating with others, by respecting property and by living honestly.

The stories and facts are presented in terms that will be meaningful to pupils of grades 4 through 7. The situations are normal class elections, social events, bus trips, writing and preparation of a class play. The individual is seen in relation to people and situations, and the stories seem true to life. There is good material for discussion and language arts work and also for citizenship education.

*Israel: The Land and The People* (7 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$42 per set, \$6 single strips). We have always thought it important to understand the environmental background in order to understand any nation and this series gives us a very good picture of the land behind the new Israeli nation. One strip presents an over-all story of Israel; other strips take up the story by showing us what the various sections and groups are like: Galilee, Haifa and the Valley of Jezreel, The Negev, Tel Aviv and the Coastal Plain, the Jordan Valley, Jerusalem and the Judean Hills.

Always we see what the land means to the people, and how the people have cultivated the land for better living. Photographs for the pictures were taken in Israel today, so we see things as they actually are now. The facts are well presented and the ma-

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

*A scene in the filmstrip starring Kirk Douglas as Ulysses.*

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50. With guide, \$7.80.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, black-and-white, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, full color, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50. With guide, \$7.80.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defae classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$4.00.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50.

**JACK C. COFFEY CO., INC.**  
710 Seventeenth St. NORTH Chicago, Ill.

material is very good for social studies, for social geography and for world history.

*Language Filmstrips: Elementary French For Young Americans and Elementary Spanish For Young Americans* (2 series: each set complete, 6 strips with 3 records; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$35.10 for complete set; \$8 for single strip and record; \$13 for two filmstrips and record). Each of these sets is intended for elementary language study in grades 3 through 6. In each instance the student is introduced to French or Spanish boys and girls as they go about their daily activities in the school, at home, with their families and at play after school. The scenes and objects presented are familiar, and the situations portrayed are part of normal living in any country. This helps to give meaning to the language itself and makes it seem normal and natural. Opportunity is provided for repetition, for questioning and for conversation. The work is divided into sections for class use and can be adapted to many lessons. The approach to the language in each instance is by easy steps and vocabulary is increased as the story proceeds. The material is geared to introductory language study and arranged in terms of elementary pupil abilities.

*Party Themes and Party Recipes* (single strip, color; produced by Audio-Visual Associates for the Carnation Co.; available without charge from Audio-Visual Associates, Box

243, Bronxville, New York). With the holiday season just around the corner this filmstrip has interest value for young hosts and hostesses. The recipes are those which will appeal to the high school group. Attention is focused on the use of instant nonfat dry milk crystals in cooking. Some of the recipes are for adult family parties, and the strip might well be recommended for clubs and community groups as well as for school classes.

*Teaching Science In The Elementary School* (4 filmstrips, color, each with record and guide; produced by Long Filmstrip Service, 7505 Fairmount Ave., El Cerrito, Calif.; \$16.50 for filmstrip, record and guide). This is a series intended for in-service teacher education and also good for class use. The four units are "The World Is So Full of A Number of Things," "All About Milk," "Science in Our Daily Bread," "Science in the Magic Story of Water."

Here are basic, simple science stories, brought down to the level of the young scientists who are beginning to look at the world around them and to question and experiment. Suggestions are made for teacher direction of the study trips and experiments; simple science problems are outlined, and pupils are shown at work carrying out simple projects. The picture sequences have pupil interest appeal, and they also serve to give a teacher some good ideas on motivating pupils to further science study and work. The series is well planned and well presented.

*The Color Of Man* (single strip, color; produced by Pyramid Film Producers, 1636 No. Sierra Bonita Ave., Hollywood 36, Calif.; \$6 single strip.) The filmstrip is based on a motion picture of the same name, but does not need to be used with the film, for it is a complete unit in and of itself.

Basically, of course, the story is that of the problems presented by prejudice and discrimination based on the color of a man's skin. Considerable attention is focused on scientific theories relating to skin pigmentation; facts are presented about laws pertaining to segregation and integration. The presentation is straightforward, simple and thought-provoking. The subject area is a hard one to deal with, but this particular filmstrip could be used to assist in discussion of the problem with classes, in church, in community group meetings and in college workshops. Study guides are available to assist in presenting the material at the various group levels.

## Poland: Land Under Communism

(*Encyclopaedia Britannica Films Inc., 1150 Wilmette Avenue, Wilmette, Illinois*) 22 minutes, sound, color and black and white, 1960. \$240 and \$120. Teachers guide available.

### Description

The struggle of the Polish people in their search for national identity in a communist society is depicted in *Poland: Land Under Communism*. Through the eyes of two families—one representing the agrarian way of life and the other symbolizing the new industrial order—come revealing glimpses of the past and present of this proud but oft-dismembered nation.

Scenes of a contemporary peasant family serve to link the past with the present, recalling Poland's former grandeur, the years of oppression and devastation and the ever-present problem of survival for the peasant faced with the threat of collectivization. In the classroom young Poles learn a significant geographical generalization reinforced by historical record: with no natural boundaries on either the east or the west, the very existence and disposition of Polish boundaries during the past two hundred years have been dependent upon the goals and policies of non-Polish governments.

A painting of a Polish king, Stephen Batory is a reminder that this 16th century monarch elected by the Polish *Sejm* or parliament invaded Russian domains as far as Pskoff, compelling the Russian Czar Ivan IV to sign the humiliating Treaty of Zapolsk. The career of Batory, termed the "foremost warrior of his time," suggests the intense and almost religious spirit of nationalism which has enabled the Poles to cling tenaciously to their native language, religion and culture through generations of foreign subjugation.

In spite of their domination by an anti-religious political creed, the Polish people have maintained their devotion to the Roman Catholic faith. In this connection it is interesting to remember that the Poles have tradition-

ally regarded themselves as the guardian of Latin Christianity and the outpost of western culture against eastern invaders from the time of the Polish victory over the invading Tatars in 1241 to the moment of Pilsudski's repulse of Russian Bolsheviks at the gates of Warsaw in 1920 in what has been called the "miracle on the Vistula."

Yet in a Poland where the present economy and disputed political frontiers depend on the Soviet Union there are the inevitable characteristics of an authoritarian state. Trips of children to a "Lenin House of Culture" and the presence of a state-owned newspaper are familiar aspects in the daily routine of a steelworker's family.

Views of Poland's industrial enterprises reflect the serious concern of party leaders in the rapid economic growth in heavy industry with relatively little production of consumer goods. However, in contrast with modern Silesian coal mines and the bustling harbor of Gdynia, almost half the population still remains on the land, struggling unsuccessfully to feed the other half—so it appears—with an inferior farm technology. The agricultural problem has not been alleviated, as the film emphasizes, by the reluctance of the peasants to embrace communist economic theories. Retaining their individual plots of land, the peasants have stubbornly resisted attempts at collectivization and have remained suspicious of the government.

The proposition that Communist efforts to regiment the Polish intellec-

tual community have failed appears to find some justification in this record. Some signs of an incipient intellectual freedom in universities are reported. Polish students are also portrayed as generally enamored of western ideas and innovations including jazz and novels—a reaction in part against the cultural isolation of the Stalinist period.

### Appraisal

Notwithstanding the nature of its subject matter, this survey of contemporary Polish life and commentary on historical influences strives for objectivity, avoiding the all too familiar pedagogical excess of exhortation and denunciation in developing attitudes about communism. Although the gains in economic growth under Communism are acknowledged, it is made clear that advances were secured at a great cost in human suffering.

The limitations of this film stem chiefly from the brevity inherent in any attempt to survey a complex problem. This is evident in the absence of any critical inquiry concerning the political and ethnic problems which shaped Polish history and the failure to consider carefully the impact of social and technological change upon Polish institutions and values. Moreover, in spite of the persistent theme of a resurgent Polish nationalism holding in check the advocates of formal Communist doctrine, there is, surprisingly, no effort to account for the success of the peaceful Polish "revolu-

A farmer plowing his field in this scene from "Poland: Land Under Communism" by Encyclopaedia Britannica Films.

tion" of October, 1956, against Moscow domination when contrasted with the disaster of "national communism" in Hungary a few weeks later.

The greatest educative value of *Poland: Land Under Communism* in the hands of the secondary school social studies teacher lies not merely in its ability to impart factual information but rather in its use as an instrument of reflective thinking, in posing questions about such crucial issues as co-existence, the nature of economic goals, factors in economic growth and the impact of cultural change. Technically above criticism, this production should be well adapted to relevant aspects of the social studies program, grades 9-12.

—John P. Lunstrum

## Universe

(National Film Board of Canada, 680 Fifth Avenue, New York 19, New York) 29 minutes, 16 mm, sound, black and white, 1960. \$130.

### Description

*Universe* is a profound treatment of man's position in the cosmos and of his efforts to learn more about the vast universe of which he is a part. As the sun rises over an earthly city and the people go about their respective tasks, life's dependence upon the outpourings of energy from the solar furnace is revealed. If, as the narrator points out, the Milky Way could be viewed from afar, the earth would be seen as one of nine known planets whirling about the sun, one star among the millions of stars in the galaxy.

Dr. Donald A. MacRae of the David Dunlop Observatory is pictured setting up the reflector telescope to photograph stars in an effort to learn more about the universe and the bodies therein. From the study of hundreds of thousands of such observations astronomers have, within comparatively recent times, begun to piece together an accurate picture of the universe. Already enough is known for man to journey in imagination to some of the bodies nearest our earth in space.

The closest of the interplanetary bodies to our earth is the moon. Close-ups of the moon's surface as seen through the eyes of our best telescopes are pictured. These reveal a stark, rugged, lifeless expanse. Man could not exist unprotected on the moon for even a few seconds. With no atmosphere to temper the withering outpourings from the sun, temperatures by day reach that of boiling water, by night a chilling 240° below zero.

Colin Law at work on models used in National Film Board of Canada's "Universe."

The moon whirls eternally about its master the earth. The earth in turn is dominated by the sun which is at the center of the nine known planets.

The planet Mercury is depicted as closest to the sun. Mercury keeps one face always toward its master. Being so close to the sun and too small to hold an atmosphere, conditions are too harsh for life on this barren planet.

Further out is the planet Venus, eternally shrouded in a dense cloud. Even though it is our nearest planetary neighbor, Venus is one of the least known.

Our earth is located between Venus and Mars. For more than a century man has looked toward Mars, the red planet, and wondered whether he is alone in space.

The alternating green and red which change with the Martian seasons would indicate the probable presence of vegetation. Whether other life exists is not known but, because of the lack of oxygen and water, it is certain that no creature such as man could exist there.

Beyond Mars, where theoretically there should be another planet, astronomers have found hundreds of rocky fragments. These range in size from that of a pea to one of more than 300 miles in diameter.

The huge planet Jupiter is shown next. It is larger than all the other planets combined. In keeping with its size, it dominates 12 moons. No human could live there however, because of the cold and the composition and great density of the atmosphere.

Beyond Uranus and Neptune is the last of the known planets, Pluto. So far is Pluto from the sun, more than 4

billion miles, that the sun appears as a mere star, one among many. Nothing exists in the perpetual cold and darkness of Pluto.

Another member of the Sun's family which is pictured is the comet. It is a nebulous aggregate of dust and gases which become luminescent as it approaches the sun. Often a filmy tail a million miles long is forced from it by pressure of the sunlight.

The center of the solar system, the sun, is depicted as a thermo-nuclear furnace which has raged with the energy of 1 million H-bombs per second for more than five billion years. A planet too close or too far away from this source of energy would be devoid of life. The earth at 93 million miles is ideally situated.

A montage representing life on earth is shown as the scene shifts to the observatory where the narrator explains the procedure for locating and training the telescope on a particular star in the heavens. It is not a portrait of the star which is desired, but a photograph of the spectrum of the star. Such photographs and other data are studied to learn the composition, movement, size, temperature, etc., of stars, because nothing can be learned of a star directly.

As the audience is taken on an imaginary journey to the stars, many differences are pointed out among those stars in the Milky Way. Some, as Beta in the Constellation Lyra, have another star circling them. These we call twins. There are multiple stars, such as Castor in Gemini. There are giants many times the size of the sun, and dwarfs where one cubic inch of matter would weigh 40 tons. In addi-

Comments and materials for review should be sent to Audio-Visual Center, Indiana University, Bloomington, Ind.

tion there are stars rotating at such a rate as to throw off huge rings of matter which move outward in an ever widening circle. Pulsating stars are pictured increasing and decreasing in brilliance. There are rare stars where temperatures reach 5 billion degrees resulting in an explosion to form a "novae" or "super novae." The Crab Nebulae in the constellation Taurus is the remnant of such an explosion which occurred more than ten centuries ago.

In addition to stars and such satellites of these as may exist, there is much dust and gas in interstellar space. The stars, dust and gases were thought until recently to be a chaotic aggregation. However, years of patient work have revealed that a pattern really exists.

If man could move with the freedom of a god and were to go beyond our own galaxy, the Milky Way, he would come to the edge of an endless sea filled with islands of stars called galaxies. Many types of galaxies are to be found, floating eternally in space. It is here that stars are formed from dust and gasses of interstellar space, here too that stars consume themselves. How many of the billions of stars must have planets as ideally suited for life as our own?

As the narrator indicates, when man looks this deeply into space he sees only a ghostly image of the past. The light which is seen began moving toward us millions of years ago, long before the dawn of life on earth. "In all of time," says the narrator, "of all the planets, of all the galaxies in space, what civilizations have arisen, looked into the night, seen what we see, asked the questions that we ask?"

The film ends with the sunrise. The work of the astronomer is ended and another day begins on the earth, our tiny island in the vast Universe.

### Appraisal

Both the junior and senior high school teacher will find *Universe* to be an excellent medium for the introduction or summation of a unit on astronomy. The film is also well suited for use in presenting basic information on the solar system. The college personnel on the previewing committee felt that the film might also be used in introducing a beginning undergraduate course in astronomy.

The first half of the production gives an excellent overview of the members of the solar system and presents much basic information concerning these bodies. The second half delves into the realm of the stars, presenting a summation of what man has learned about the stars and star systems.

The many areas touched upon contribute to the usefulness of the film as a device to motivate further study and discussion on the part of students. The treatment is such as to provoke deep thought and a feeling of awe toward the humble place of man in the cosmos.

—Donald Nicholas

## Conserving Our Forests Today

(Coronet Films, 65 East South Water Street, Chicago, Illinois). 11 minutes, 16mm, sound, color and black and white, 1960. \$110 and \$60. Teachers guide available.

### Description

*Conserving Our Forests Today* highlights not only the varied, inter-related uses that America's timberlands must serve, but also points out the role of the citizen and the forester in maintaining this resource.

The variety of products supplied by

trees are shown to include not only lumber but a host of pulp products ranging from paper to motion picture film and synthetic textiles. Other benefits that are pictured include use of western forest areas for livestock grazing, the function of forests in creation of a good watershed to provide adequate water for domestic and commercial uses, and the recreational benefits found in well maintained national and state forests.

With principal emphasis placed upon Pacific Coast and Southern forests, the comparative growing rates of the Douglas fir in the west and the Southern pine are graphically illus-

trated. While the Douglas takes nearly 125 years to mature, the Southern pine matures to commercial size in 30 years. The growth comparison is emphasized as a young boy of two stands beside a two-year-old pine seedling and then is shown along side it at various intervals until both are 30. The role of hardwood trees is also indicated as is the need for careful cutting of all trees to provide for sustained yield.

Modern means of fighting the forest's enemy, fire, are seen to include fire lookout towers and fire fighting crews operating from trucks, parachuted from planes or landed by helicopters. The other enemies of trees are insects, disease and improper logging. Aerial spraying plays an effective role against insects and disease.

Shown in detail is reforestation using seed orchards in which seed are harvested for aerial seeding, and also the raising of seedlings for transplanting to logged- or burned-over lands is presented in detail.

### Appraisal

For intermediate grade and lower junior high pupils, *Conserving Our Forests Today* provides a concise overview of timber conservation and use practices in two primary wood products regions of the United States. What is said of these regions is also applicable to other areas of the United States with only minor modifications.

At both age levels the film could be used to introduce or organize a unit on forest lands since it provides many avenues for further exploration and questioning by pupils. These include: "Are recommended forest-land grazing practices the same throughout the nation?" and "What is the difference in utilization practices between the slow growing western trees and those that mature more rapidly in the South?" These are two points that the teacher can use to develop new concepts with her pupils and prevent formation of erroneous ones from the film's too-simplified statements.

Quickly covering so much material in a seemingly unhurried manner, the film's excellent development and organization is apparent. Simple effects like the growth comparisons between the boy and the tree and numerous views of children of the audience's ages enjoying the forest areas would contribute to a sense of personal identification by the pupils seeing the film and are practices to be commended in films whose object is to motivate the interest required of citizens in development of intelligent concern about use of natural resources.

—Richard Gilkey

## PHILCO advances the science of visual education

### WITH NEW TRANSISTORIZED CLOSED CIRCUIT TV SYSTEMS

Visual education, through the use of closed circuit TV, is being adopted rapidly by schools throughout the nation. Philco's broad experience in educational TV is your assurance of obtaining the greatest flexibility and economy. Philco's new all-transistor equipment is your guarantee of maximum reliability, freedom from maintenance and ease of operation. Write today for information and your copy of the Philco Closed Circuit TV Systems Planning Guide.

#### Government & Industrial Group

4700 Wissahickon Ave., Philadelphia 44, Pa.

In Canada: Philco Corp. of Canada, Ltd., Don Mills, Ont.

Philco Closed Circuit TV Systems permit multi-group instruction, with full audience participation.

**PHILCO**  
Famous for Quality the World Over

# AV industry news

## NAVA Convention Poll

A NAVA sustaining member poll as to convention site preference resulted in an almost 95-percent vote in favor of continuing to meet in Chicago, according to a report by Bob Maybrier and Erv Nelson to the NAVA board. A good sized majority favored continuing at the Morrison Hotel for the present, as against the Sherman or the Hilton at some increase in costs. The 1961 meeting is definitely scheduled for July 22-25 at the Morrison, and an option has been taken on dates there also for the 1962 meeting—subject, however, to the way promised improvements in service are carried out at the 1961 meeting.

Convention days and hours will be the same as in the 1960 program. No sales meetings or other counter-attractions are to be held on NAVA's convention days, except between 10:45 a.m. and 1 p.m. and after 5 p.m. They are to be limited to 3 hours, at or reasonably near the convention hotel in order to minimize the time participants are away from general convention and trade show activity.

An invitation will be extended to DAVI to hold its summer meeting, or at least board meeting, in conjunction with the other AV groups that, with NAVA, make this annual event the "Biggest AV Show on Earth." The very successful AV Education Forum initiated last July by the Illinois Audiovisual Association and cooperating groups is to be featured also in 1961.

NAVA's annual midwinter meeting will be held in Dallas, Texas, January 12-14. The national convention planning committee will meet there on the 12th. The annual western meeting will be held at San Diego, Feb. 21-23.

## Videotape Spread

Ampex Professional Products reports 93 TV tape installations in closed circuit TV systems in the United States, 416 in broadcast studios and production companies and another 194 in companies outside the United States.

## Mobile Lang Lab

The Edwards Company, Educational Equipment Division, is routing a language laboratory demonstration trailer on an itinerary that will cover 250 cities. Billed as an "electronic classrooms on wheels," the air-condi-

tioned trailers are 35 feet long and carry operating equipment for language laboratory, school clock and program system, fire alarm system, doctor's silent paging system, telephone intercom and other electronic communication.

## Good Kodak Show at PSA

A feature of the Houston, Texas, show of the Photographic Society of America was an excellent combination

of product and process in the Eastman Kodak exhibit. An extensive lineup of product use demonstrations of exposure, finishing, color, travel and nature photography, etc., was topped by a 90-minute, 3-screen spectacular, "Photoscenic America." Planners of audiovisual exhibits are remembering more and more that a "show" should really *be* a show, not just a static showcase, however pretty.

## Solons To View NDEA Effect

Members of Congress, home "on leave" until January 3, are being urged to visit schools in their home district to see for themselves the good accomplished in bettering education through

Our professional

grants provided under the National Defense Education Act. Invitations are extended, usually by AV directors or other school administration staff, with an assist at times from AV dealers and industry representatives where the lawmakers are personal friends.

## Pentron in New York

Pentron, Chicago audio manufacturer, has established a complete New York factory branch operation at 58-08 37th Ave., Woodside 77, Long Island, N. Y. Arthur Weiss is in charge. He was formerly eastern sales manager for DeJur-Amsco and before that for Ampro.

## New Films Outnumber Books

According to Crawley Films' (Canada) lively monthly news letter, 66 producers last year turned out 863 motion pictures, plus 5,300 other film items such as slidefilms, trailers, commercials, etc. There are 333 Canadian sources for free sponsored films.

## Shatterproof TV

A new Transvision 24-in. classroom TV receiver features shatterproof

glass protection for its picture tube. A set knocked over accidentally supplied the shattered fragments shown above.

## Teaching Machine via Recordak

Kodak has established an educational microfilm systems department. According to an announcement by James E. McGhee, vice president, "Microfilm provides the most versatile medium for preparing and utilizing

efficient systems of programmed learning." It is held that the new concept concerns itself less with teaching machines than with the teaching and training programs which are simplified through the use of appropriate equipment.

## AV Digest By Graflex

The first edition of the Graflex Audiovisual Digest has recently been published by Graflex, Inc., a subsidiary of General Precision Equipment Corporation, Rochester, New York.

The publication, prepared by and for the teaching profession, is said to have as its editorial objective the dissemination of information which will assist teachers in extending their knowledge and application of AV techniques and equipment. The 52-page paperback edition deals with such subjects as filmstrips, photographic hints and aids, international tape exchange, tachistoscopic training, television in education and many other authoritative articles.

## For Opinion Makers

A good example of intelligent public relations communication is Rheem-Califone's sending of suitable issues of its internal house organ, "Management News," to selective lists of opinion makers outside the company. A recent issue featured the company's showing of teaching machines at the NAVA trade show.

## "Good News" House Organ

Family Films calls its new dealer-consumer house organ "Good News." First issue includes poster listing, Christmas releases, all bright in traditional red and green. To encourage the use of AV Training Kit and the pastoral counseling filmstrips dealing with marriage problems, these two sets of sound filmstrips are offered as free premiums when "basic" (24 to 40 strip) filmstrip libraries are bought by a local church. Damaged color filmstrips are replaced at a cost of only 50 cents each to allay new users' fear of possible, but unlikely, costly damage.

## History Lives In Sound And Song

"Just about the most authentic pair of records in the field of Americana."

Herbert Mitgang—New York Sunday Times, August 28, 1960

"They are some of the most delightful history I have ever heard."

John Conly—The Atlantic Monthly, October, 1960

So speak two of the most distinguished record reviewers in America of HEIRLOOM RECORDS' first two releases:

**YANKEE LEGEND**, The Story of New England Through its Ballads and Songs (HL 500)

**THE AMERICAN REVOLUTION** through its Songs and Ballads (HL 502)

This opinion is shared by every critic who has reviewed them to date in both the lay and educational press—from Downbeat to Audio Cardalog.

**YANKEE LEGEND** consists of 18 songs of New England's farming, fishing, trading, lumbering—of her tragedy and humor—of her struggle for independence—skillfully woven into a logical narrative pattern by BILL BONYUN, Old Sturbridge Village Ballad Singer, whose years of experience in the classroom have enabled him to create this unique teaching tool.

Both records are complete with teacher notes and a well illustrated pamphlet for pupil use.

And now—Just Released—**SONGS OF YANKEE WHALING** (AHLP 1)

Heirloom Records is proud to have been chosen by **AMERICAN HERITAGE** to produce this exciting new record—complete with the sounds as well as the songs of whaling—to supplement "The Story of Yankee Whaling," an American Heritage Junior Library Book.

**HEAR**—the lookout's cry as the whale is sighted and the lowering of the boats to start the chase.

—sea shanties as actually sung with the sounds of the sea, the ship and the shouted orders as accompaniment for the shantyman and his choring crew.

—a South Seas song sung by a Tahitian girl just as it was sung long years ago for many a Yankee whalerman stopping at Polynesia for supplies.

—all tied together with a superb down-east, Yankee narration.

above records  
available at  
\$4.95 each at

**HEIRLOOM**

**RECORDS,**  
Brookhaven, N. Y.

In **THE AMERICAN REVOLUTION** Bill Bonyun sings and narrates the American side while J. A. SCOTT (chairman of the History Department of Fieldston School) counters with songs and narration of the British point of view—both with great spirit, and supported by a rousing male chorus and the 50 great drums and shrill fifes of the famous **MATTATUCK DRUM BAND**.

## TENT LIFE IN BIBLE LANDS

Shows what doily life might have been like in early Bible days. Home environment, daily tasks, dress and family customs are shown. 14 color transparencies mounted in "childproof" Viewmaster-type

### FILM DISC

For use with Primary grades and up. With script, study print, in sturdy folder \$1.65

**hapel Films**

P. O. Box 179, Culver City, Calif.

## Dictaphone Lang-Lab

A new entry into the language laboratory market is named "Dictalab." It features quarter-track recorders, with the master channel separated from the student-response recording and by a vacant channel that is put to the same use when recording in the opposite (Side 2) direction. Three

types of installation are offered, audio-passive, listen-respond, and listen-respond-record. Teacher may monitor at console or while roving the class.

## People

PAUL R. BUNKER has been named sales manager for the Magnecord line at Midwestern Instruments, Tulsa. HUGH J. DALY, vice president, is responsible for the marketing and sales program of the entire Magnecord line.

RAYMOND P. KROGEL, newly elected vice president of Encyclopaedia Britannica Films, will supervise activities in 12 northeastern states. "Ray" has been with EBF since 1948 and earlier was national educational manager for RCA-Victor.

RICHARD A. GOODROW has joined the Bell & Howell audiovisual sales staff as sales promotion manager for that department. He will be responsible for development of advertising and sales promotional materials, exhibits and dealer orientation. He was formerly with Ford and with *Life* magazine in merchandising and promotional posts.

The National Safety Council has named FITHIAN (JACK) FARIES staff representative for its safety education supervisors section. He was formerly director of audiovisual and safety education in the Lexington, Ky., public school system.

# NEW BONUS RECORDED TAPE

Some of our greatest popular songs—"Full Moon and Empty Arms," "Till the End of Time," "Stranger in Paradise"—took their melodies from the classics. Eight of these lovely themes—in their original classical setting—are the basis for "Classics that Made the Hit Parade."

This unusual program, professionally recorded in sparkling full fidelity on Audiotape, is available RIGHT NOW from Audiotape dealers everywhere. (And only from Audiotape dealers.) Don't pass up this unique opportunity to get a fine recorded tape at a bargain price.

**audiotape**

Manufactured by **AUDIO DEVICES, INC.**  
 444 Madison Ave., New York 22, New York  
 Offices in Hollywood & Chicago

## DETAILS OF THE OFFER

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains one 7-inch reel of Audiotape (on 1½-mil acetate base) and the valuable "Classics that Made the Hit Parade" program (professionally re-

corded on Audiotape). For both items, you pay only the price of two reels of Audiotape, plus \$1. And you have your choice of the half-hour two-track stereo program or the 55-minute monaural or four-track stereo versions—all at 7½ ips.

See your Audiotape dealer now!

## DETAILS OF THE PROGRAM

- Borodin . . . . . Polovtsian Dances from Prince Igor (Stranger in Paradise)
- Tchaikovsky . . . . . Symphony No. 5 in E (Moon Love)
- Waldteufel . . . . . Espana Waltz (Hot Diggity)
- Chopin . . . . . Polonaise No. 6, in Ab Major (Till the End of Time)
- Tchaikovsky . . . . . Symphony No. 6 in B (The Story of a Starry Night)
- Rachmaninoff . . . . . Piano Concerto No. 2 in C Minor (Full Moon and Empty Arms)
- Chopin . . . . . Fantasie Impromptu in C# Minor (I'm Always Chasing Rainbows)
- Tchaikovsky . . . . . Romeo and Juliet Overture (Our Love)

## NEW EQUIPMENT

### CAMERAS, Movie, TV

**Plug-it-in" Vidicon Camera.** Will produce usable pictures with as low as 3 foot-lamberts of scene highlight brightness. Input 117v 60 cycle AC 65 watts. Signal output 3.0 volts peak video into 75 ohm load, sufficient to

"Plug-it-in" Camera

transmit signal over 3000' of cable. Automatic exposure compensator. Wt 19 lb. incl. f/1.9 25 mm lens. Model 700-S with built-in microphone and amplifier sound channel, \$1495. TELETRONICS

For more information circle No. 101 on return postal card.

**Self-processing Camera** for 35mm or 16mm motion picture film, promises "from exposure to viewing in less than 60 seconds." Film negative is developed and fixed in a magazine attached to the back of any roll film movie camera. Developing agent is a chemically pre-saturated paper material that winds with the exposed film onto a take-up spool in the magazine, which is only slightly larger than the movie camera. Separate portable "Rapromatic" processor models are also available. RAPROMATIC

For more information circle No. 102 on return postal card.

### PROJECTORS, Movie, TV

**Pre-Threaded Movie Repeater** holds up to 400ft of sound film in a transparent plexiglas magazine. Operates on 25 or 60-cycle AC or on DC current. Wt 22lb, bulk less than 1 cu. ft. TV type screen (in cover) or large size conventional projection. 5-watt output. 400-watt lamp. 2" f/1.6 lens. Elim-

#### Pre-Threaded Repeater

minimizes distraction of set-up and threading in classroom. With case, 10 ft. power cord and film magazine \$498. HARWALD.

For more information circle No. 103 on return postal card.

### PROJECTORS, Still

**Act-O-Matic Dual-Position Science Projector** with adjustable apparatus support for transparent cells, test tubes, meters. Shows transparencies up to 5x5"; 5'0 image 7' from screen. Changes instantly from horizontal to vertical throw without refocus. \$350. Projection milli-ammeter and volt

meter \$25.75. Writing attachment with 100' reusable roll \$49. Transparencies and manuals for 400 tested science experiments \$110. LABFURN.

For more information circle No. 104 on return postal card.

**Projecto-Lite Overhead** features a direct straight-through optical system which, according to the manufacturer gives more light with less heat than 1000watt designs. Entire head comes off for portability. Large focusing knob. Image tilting knob. All four legs separately adjustable for leveling. Double-duty side tables carry roll of clear plastic. Wt. with shelves 49 lb. 10x10" transparencies. \$495. OZALID.

For more information circle No. 105 on return postal card.

**Lower Profile Vuegraph.** The features of the large Vuegraph overhead projector are now available in a lower-profile model in which the projection head stands only 17½" above the base-bottom. The head (6"x7") and the projector housing (23"x12½"x-12½") indicate a compact unit that still accommodates 10x10" transparencies, 1000watt lamp, etc. BESELER.

For more information circle No. 106 on return postal card.

**Balomatic Slide Projector** shows up to 40 2x2's, intermixed, any standard mount, 3-way editor permits sequencing while projecting. All controls are

The KEYSTONE Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Transparencies, Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful —

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

Write for Further Information or a Demonstration by our Local Representative.  
KEYSTONE VIEW CO., Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

grouped around a translucent window that lights up to give a lighted working surface whenever a slide is not being projected. No need to refocus; slides do not "pop" from abrupt temperature change. Automatic timer at intervals continuously variable from 4 to 30 seconds. Screen goes dark during slide change. 500-watt. 5" f/3.5 with built in iris diaphragm light control. With case \$119.50. 4" and 7" lenses, 15ft remote control cord, and tape recorder synchronizer are accessories. B&L.

For more information circle No. 107 on return postal card.

## PROJECTION ACCESSORIES

Large glass rear-projection screens up to 18ftx9ft are now surfaced for rear projection. A projection wall of ¼, ⅜ or ½-inch thick glass shuts out the sound of equipment and may be written on by new types of erasable chalk.

Available also in lighter weight break-resistant Plexiglas, sizes up to 102 x 120 inches. POLACOAT.

For more information circle No. 108 on return postal card.

## SOUND, Equipment & Accessories

**Matched Stereo Pre-Amp and Tuner.** 28-watt pre-amplifier, push button controls, individual channel bass-treble controls, mono-stereo blender, center summed channel. \$119.50 with case. Tuner with special dial variable AFC, and variable inter-station muting control. \$99.95 with case. CROSBY.

For more information circle No. 109 on return postal card.

## LANGUAGE LAB

**Tape Clip,** plastic, to keep recording tape from flapping around, is now packed in each reel of 3M tape. The clips can be bought at 10 for 35 cents, retail. MMM.
